

Clinical trial results:

A Phase 3, Multi-Center, Randomized, Double-Blind, Placebo-Controlled, 104-Week Study to Evaluate the Efficacy and Safety of Belimumab Administered in Combination with Rituximab to Adult Subjects with Systemic Lupus Erythematosus (SLE)

Summary

EudraCT number	2016-003050-32
Trial protocol	DE NL ES
Global end of trial date	07 July 2021

Results information

Result version number	v1 (current)
This version publication date	18 April 2022
First version publication date	18 April 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 September 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	07 July 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of belimumab and a single cycle of rituximab administered in a combination regimen to adult participants with SLE.

Protection of trial subjects:

Specific eligibility, monitoring and individual participant/study treatment stopping rules were implemented in the study protocol to mitigate potential risks. An independent data monitoring committee performed periodic review of unblinded safety data. The protocol was amended to ensure safety monitoring during the corona virus disease-19 (COVID-19) pandemic, including recommendations for a safety contact with subjects in the event they could not attend clinic visits and a local analysis of laboratory assessments if central lab results could not be obtained. Also, provisions were made to allow short term treatment with hydroxychloroquine for experimental treatment of COVID-19 and direct supply of Belimumab to participants if participant was unable to visit the site.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 March 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 12
Country: Number of subjects enrolled	United States: 105
Country: Number of subjects enrolled	France: 19
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Netherlands: 18
Country: Number of subjects enrolled	Spain: 20
Country: Number of subjects enrolled	Argentina: 15
Country: Number of subjects enrolled	Brazil: 20
Country: Number of subjects enrolled	Korea, Republic of: 26
Country: Number of subjects enrolled	Mexico: 9
Country: Number of subjects enrolled	Russian Federation: 46
Worldwide total number of subjects	292
EEA total number of subjects	59

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	284
From 65 to 84 years	8
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This was a multicenter study conducted at 71 centers in 11 countries. This was a randomized, placebo-controlled, parallel study where participants received treatment in any one of the treatment arms.

Pre-assignment

Screening details:

A total of 396 participants were screened, of which 104 were screen failures. A total of 292 participants were enrolled in the study (Intent-to-Treat Population: It comprised of all randomized participants who received at least one dose of study treatment [Belimumab or Rituximab or Placebo]).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Belimumab + Placebo

Arm description:

Participants received Belimumab 200 milligrams (mg) administered subcutaneously (SC) on Day 1 and then weekly (i.e., every 7 days) through Week 52. Participants also received rituximab-placebo administered by intravenous (IV) infusions at Weeks 4 and 6 in double blind manner. Participants received standard therapy excluding Immunosuppressants and including anti-malarials, non-steroidal anti-inflammatory drugs (NSAIDs), and/or corticosteroids tapered down to prednisone equivalent of less than or equal to (\leq) 5 mg/day until Week 104. Participants did not receive treatment after 52 weeks and were in observation until Week 104.

Arm type	Placebo
Investigational medicinal product name	Belimumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Belimumab 200 milligrams (mg) was administered subcutaneously (SC) on Day 1 and then weekly (i.e., every 7 days) through Week 52 (Belimumab + Placebo and Belimumab + Rituximab) and through Week 104 for Belimumab + Standard therapy.

Investigational medicinal product name	Rituximab-placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab-placebo was administered by intravenous (IV) infusions at Weeks 4 and 6.

Investigational medicinal product name	Standard therapy
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Standard therapy was administered.

Arm title	Belimumab + Rituximab
Arm description: Participants received Belimumab 200 mg administered SC on Day 1 and then weekly (i.e., every 7 days) through Week 52. Participants also received rituximab 1000 mg administered by IV infusions at Weeks 4 and 6 in double blind manner. Participants received standard therapy excluding Immunosuppressants and including anti-malarials, NSAIDs, and/or corticosteroids tapered down to prednisone equivalent of <= 5 mg/day until Week 104. Participants did not receive treatment after 52 weeks and were in observation until Week 104.	
Arm type	Experimental
Investigational medicinal product name	Belimumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use
Dosage and administration details: Belimumab 200 milligrams (mg) was administered subcutaneously (SC) on Day 1 and then weekly (i.e., every 7 days) through Week 52 (Belimumab + Placebo and Belimumab + Rituximab) and through Week 104 for Belimumab + Standard therapy.	
Investigational medicinal product name	Standard therapy
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: Standard therapy was administered.	
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details: Rituximab 1000 mg was administered by IV infusions at Weeks 4 and 6.	
Arm title	Belimumab + Standard therapy
Arm description: Participants received open-label Belimumab 200 mg administered SC on Day 1 and then weekly (i.e., every 7 days) until Week 104. Participants also received standard therapy including immunosuppressant, anti-malarials, NSAIDs, and/or corticosteroids tapered down to prednisone equivalent of <= 5 mg/day until Week 104.	
Arm type	This was a part of exploratory analysis of study.
Investigational medicinal product name	Standard therapy
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: Standard therapy was administered.	
Investigational medicinal product name	Belimumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use
Dosage and administration details: Belimumab 200 milligrams (mg) was administered subcutaneously (SC) on Day 1 and then weekly (i.e., every 7 days) through Week 52 (Belimumab + Placebo and Belimumab + Rituximab) and through Week

Primary: Percentage of participants with a state of disease control at week 52

End point title	Percentage of participants with a state of disease control at week 52
End point description: Percentage of participants with a state of disease control (Independent blinded assessor [IBA]) was defined as the percentage of participants with a Systemic Lupus Erythematosus Disease Activity Index 2000(SLEDAI-2K)score less than or equal to(\leq)2 achieved without immunosuppressants and with corticosteroids at a prednisone equivalent dose of \leq 5 mg/day at Week 52. SLEDAI-2K consisting 24 individual items within 9 organ systems. The SLEDAI-2K score was sum of all 24 individual items from the SLEDAI-2K, ranges from 0(no symptoms) to 105(presence of all defined symptoms) with higher scores representing increased disease activity .Modified Intent-to-Treat (MITT) Population comprised of all randomized participants who received at least one dose of study treatment (Belimumab or Rituximab or Placebo) and excluding participants from Arm 3 (Belimumab + Standard therapy) who were randomized prior to 07-Sep-2018.

Secondary: Percentage of participants with a state of clinical remission at Week 64

End point title	Percentage of participants with a state of clinical remission at Week 64
-----------------	--

End point description:

Percentage of participants with a state of clinical remission (IBA) was defined as percentage of participants with a clinical SLEDAI-2K score =0 (does not include anti-double stranded deoxyribonucleic [dsDNA] and complement activity scores), achieved without immunosuppressants and with corticosteroids at a prednisone equivalent dose of 0 mg/day at Week 64. SLEDAI-2K was a weighted, cumulative index for measuring SLE disease activity in previous 10 days, consisting 24 individual items in which signs and symptoms, laboratory tests, and physician's assessment for each item within each of 9 organ systems were given a weighted score (1 to 8 with higher score indicating increased activity) and summed if present at the time of the visit or in the preceding 10 days. The clinical SLEDAI-2K score was sum of 22 out of all 24 individual items from the SLEDAI-2K and ranges from 0 (no symptoms) to 101 (presence of all defined symptoms) with higher scores representing increased disease activity.

End point description:

Percentage of participants with a state of CR (Principal Investigator [PI] assessed) was defined as percentage of participants with a SLEDAI-2K=0 achieved without immunosuppressants and with corticosteroids at prednisone equivalent dose of 0 mg/day, sustained for at least 24 weeks. Sustained CR was longest period a participant maintains CR without break calculated as last consecutive CR date minus first consecutive CR date plus 1. SLEDAI-2K consisted of 24 individual items within each 9 organ systems. Each item was given a weighted score (1 to 8, higher score indicates increased activity) and summed if present at time of visit or in preceding 10 days. SLEDAI-2K score was sum of all 24 individual items from SLEDAI-2K, ranges from 0 (no symptoms) to 105 (presence of all defined symptoms), higher scores indicates increased disease activity. 99999 indicates that data was not available as confidence interval could not be calculated as there was no participant with a state of complete remission

Secondary: Percentage of participants with SLEDAI-2K organ improvement compared to Baseline by visits (PI assessed)

End point title	Percentage of participants with SLEDAI-2K organ improvement compared to Baseline by visits (PI assessed)
-----------------	--

End point description:

SLEDAI-2K assessments consisted of 24 individual items with 9 organ systems. SLEDAI-2K score was sum of all 24 individual items from SLEDAI-2K ranges from 0(no symptoms) to 105(presence of all defined symptoms). Higher scores indicates increased disease activity. An improvement was defined as a decrease(compared to Baseline) in SLEDAI-2K score within same organ system at a post-Baseline visit. Data for following organ systems was reported: CNS total, Vascular total, Musculoskeletal total, Renal total, Mucocutaneous total, Cardiovascular (Cardio) and Respiratory (Resp) total, Immunologic total and Hematologic total. Constitutional organ system was removed from analysis and its one item (fever)moved to hematologic organ system. 99999 indicates data was not available. Only those participants with data available at specified time points were analyzed (represented by n=X in category titles). Only participants with organ system involvement at Baseline were included.

End point type	Secondary

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of participants with SLEDAI-2K organ worsening compared to Baseline by visits (PI assessed)

End point title	Percentage of participants with SLEDAI-2K organ worsening
-----------------	---

End point description:

SLEDAI-2K assessments consisted of 24 individual items with 9 organ systems. SLEDAI-2K score was sum of all 24 individual items from SLEDAI-2K, ranges from 0(no symptoms) to 105(presence of all defined symptoms). Higher scores indicates increased disease activity. A worsening was defined as an increase(compared to Baseline) in SLEDAI-2K score within same organ system at a post-Baseline visit. Percentage of participants with SLEDAI-2K organ worsening for following organ systems were reported;CNS total,Vascular total,Musculoskeletal total,Renal total,Mucocutaneous total,Cardio and Resp total,Immunologic total and Hematologic total. Constitutional organ system was removed from analysis and its one item (fever)moved to hematologic organ system. Only those participants with data available at specified time points were analyzed (represented by n=X in category titles). Only participants with no organ system involvement at Baseline were included.

End point type Secondary

End point timeframe:

Baseline (Day 1) and Weeks 4, 8, 12, 16, 20, 24, 26, 28, 32, 36, 40, 44, 48, 52, 60, 64, 72, 80, 88, 96, 104

Secondary: Change from Baseline in Physician Global Assessment (PGA) by visits

End point title	Change from Baseline in Physician Global Assessment (PGA) by visits
-----------------	---

End point description:

The Physician's Global Assessment (PGA) was a physician-reported visual analogue scale that provides an overall measure of the participant's current disease activity. Physician's Global Assessment was collected on a 10 centimeter (cm) visual analogue scale (VAS) by placing a mark on the scale between 0 (no disease activity) to 10 (maximum disease activity). The PGA score was then rescaled for reporting by multiplying the collected score by 3 divided by 10. Hence, the PGA score ranges from 0 to 3 with higher scores indicating greater disease activity. Baseline value was the latest pre-dose assessment with a non-missing value, including those from unscheduled visits. Change from Baseline was defined as the post-dose visit value minus Baseline value. Only those participants with data available at specified time points were analyzed (represented by n=X in category titles).

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of participants with Systemic Lupus International Collaborating Clinics (SLICC) -American College of Rheumatology (ACR) damage index worsening compared with Baseline at Week 52 and Week 104

End point title	Percentage of participants with Systemic Lupus International Collaborating Clinics (SLICC) -American College of Rheumatology (ACR) damage index worsening compared with Baseline at Week 52 and Week 104
-----------------	--

End point description:

The SLICC-ACR Damage Index measures irreversible (not related to active inflammation) changes occurring since the diagnosis of SLE ascertained by clinical assessment and present for at least 6 months. The questionnaire contains 39 items covering 12 different organ systems which were scored on a numerical scale between 0 (no damage) to 7 (increasing disease damage). Individual ranges for organ systems were; ocular: 0-2, neuropsychiatric: 0-6, renal: 0-3, pulmonary: 0-5, cardiovascular: 0-6, peripheral vascular: 0-5, gastrointestinal: 0-5, musculoskeletal: 0-6, skin: 0-3, endocrine (diabetes): 0-1, gonadal: 0-1 and malignancies: 0-2. The SLICC-ACR score was calculated by taking sum of the individual scores for 12 organ systems which ranges from 0 (no damage) to 45 (increasing disease damage) where higher score indicates increasing disease damage severity. Baseline value was the latest pre-dose assessment with a non-missing value, including those from unscheduled visits.

[59] - Week 104	

Statistical analysis title	Statistical Analysis 4
Statistical analysis description:	
Odds ratio at Week 104 was calculated using Logistic regression model with covariates: Baseline SLEDAI-2K, Baseline immunosuppressant, Baseline prednisone equivalent dose and treatment group. Belimumab + Placebo arm was excluded from the model.	
Comparison groups	Belimumab + Rituximab v Belimumab + Standard therapy
Number of subjects included in analysis	191
Analysis specification	Pre-specified
Analysis type	other
Parameter estimate	Odds ratio (OR)
Point estimate	1.22
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.26
upper limit	5.64

Secondary: Percentage of participants that met the Lupus Low Disease Activity State (LLDAS) response criteria by visits (PI assessed)

End point title	Percentage of participants that met the Lupus Low Disease Activity State (LLDAS) response criteria by visits (PI assessed)
-----------------	--

End point description:

Lupus low disease activity state (LLDAS) was defined as a state which, if sustained, was associated with a low likelihood of adverse outcome, considering disease activity and medication safety. The LLDAS response criteria were: (1) SLEDAI-2K ≤ 4, with no activity in major organ systems (renal, CNS, cardiopulmonary, vasculitis, fever) and no hemolytic anemia or gastrointestinal activity; (2) no new

features of lupus disease activity compared with the previous assessment; (3) PGA (scale 0-3), ≤ 1 ; (4) current prednisolone (or equivalent) dose ≤ 7.5 mg daily; and (5) well tolerated standard maintenance doses of immunosuppressive drugs and approved biological agents, excluding investigational drugs. Percentage of participants that met the LLDAS response criteria were reported. 99999 indicates that data was not available as there was no participant who met the LLDAS response criteria. Hence, 95% CI could not be calculated.

Secondary: Percentage of participants with a state of disease control using the PI assessment of SLEDAI-2K by visit

End point title	Percentage of participants with a state of disease control using the PI assessment of SLEDAI-2K by visit
-----------------	--

End point description:

Percentage of participants with a state of disease control was defined as the percentage of participants with a SLEDAI-2K score ≤ 2 , achieved without immunosuppressants and with corticosteroids at a prednisone equivalent dose of ≤ 5 mg/day, using the PI assessment of SLEDAI-2K. SLEDAI-2K consisted of 24 individual items within each of 9 organ systems. Each item was given a weighted score (1 to 8, higher score indicates increased activity) and summed if present at the time of visit or in preceding 10 days. SLEDAI-2K score was the sum of all 24 individual items from SLEDAI-2K, ranges from 0 (no symptoms) to 105 (presence of all defined symptoms), higher scores representing increased disease activity. Percentage of participants with a state of disease control using the PI assessment of SLEDAI-2K were summarized.

-----------------	--

End point description:

The Patient's Global Assessment (PtGA) of Disease Activity is a single-item, participant reported scale developed for the assessment of the participant's overall rating of their disease activity due to SLE. The scale measures disease activity ranging from 0 (Very Well) to 10 (Very Poor) and the higher score indicates severe disease activity. Baseline value was the latest pre-dose assessment with a non-missing

value, including those from unscheduled visits. Change from Baseline was defined as the post-dose visit value minus Baseline value. Only those participants with data available at specified time points were analyzed (represented by n=X in category titles).

Secondary: Change from Baseline in Lupus Quality of Life (LupusQoL) domain scores by visit

End point title	Change from Baseline in Lupus Quality of Life (LupusQoL) domain scores by visit
-----------------	---

End point description:

LupusQoL is a SLE-specific health related quality of life (HRQOL) instrument with 34 questions across 8 domains: Physical health(8 items), Pain(3 items), Planning(3 items), Intimate relationship(2 items), Burden to others(3 items), Emotional health(6 items), Body image(5 items), Fatigue(4 items). A 5-point Likert response format was used, ranging from 0(all of the time) to 4(never) for each question. Individual domain scores were reported which were calculated by taking sum of responses to all items within each domain. Individual domain scores range: Physical health(0-32), Pain(0-12), Planning(0-12), Intimate relationship(0-8), Burden to others(0-12), Emotional health(0-24), Body image(0-20), Fatigue(0-16). Higher score indicates better HRQOL. Change from Baseline was defined as post-dose visit value minus Baseline value. Only those participants with data available at specified time points were analyzed(represented by n=X in category titles).

Statistical analyses

No statistical analyses for this end point

Secondary: Change from Baseline in Functional Assessment of Chronic Illness Therapy (FACIT)-Fatigue score by visit

End point title	Change from Baseline in Functional Assessment of Chronic Illness Therapy (FACIT)-Fatigue score by visit
-----------------	---

End point description:

The FACIT-Fatigue scale was a 13-item questionnaire completed by the participant, which provides a measure of fatigue/quality of life, with a 7-day recall period. The participant scored each item on a 5-point scale: 0 (Not at all) to 4 (Very much). The higher score for the questions, the greater the fatigue. The total score was the sum of the responses from all questions (inverted for reversed items) multiplied by 13, then divided by the number of questions answered, ranging from 0 (worse fatigue) to 52 (no fatigue) where a higher score indicates an improvement in the participant's health status and decrease in the score indicates worse fatigue/quality of life. Baseline value was the latest pre-dose assessment with a non-missing value, including those from unscheduled visits. Change from Baseline was defined as the post-dose visit value minus Baseline value. Only those participants with data available at specified time points were analyzed (represented by n=X in category titles).

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality, serious adverse events (SAEs) and non-SAEs were collected up to Week 111 (including 8 weeks of safety follow-up).

Adverse event reporting additional description:

Intent-To-Treat (ITT) Population was used to assess the all-cause mortality, SAEs and non-SAEs which comprised of all randomized participants who received at least one dose of study treatment (Belimumab or Rituximab or placebo).

Assessment type	Systematic

Reporting groups

Reporting group title	Belimumab + Placebo
-----------------------	---------------------

Reporting group description:

Participants received Belimumab 200 milligrams (mg) administered subcutaneously (SC) on Day 1 and then weekly (i.e., every 7 days) through Week 52. Participants also received rituximab-placebo administered by intravenous (IV) infusions at Weeks 4 and 6 in double blind manner. Participants received standard therapy excluding Immunosuppressants and including anti-malarials, non-steroidal anti-inflammatory drugs (NSAIDs), and/or corticosteroids tapered down to prednisone equivalent of less than or equal to (\leq 5) mg/day until Week 104. Participants did not receive treatment after 52 weeks and were in observation until Week 104.

Reporting group title	Belimumab + Standard therapy
-----------------------	------------------------------

Reporting group description:

Participants received open-label Belimumab 200 mg administered SC on Day 1 and then weekly (i.e., every 7 days) until Week 104. Participants also received standard therapy including immunosuppressant, anti-malarials, NSAIDs, and/or corticosteroids tapered down to prednisone equivalent of \leq 5 mg/day until Week 104.

Reporting group title	Belimumab + Rituximab
-----------------------	-----------------------

Reporting group description:

Participants received Belimumab 200 mg administered SC on Day 1 and then weekly (i.e., every 7 days) through Week 52. Participants also received rituximab 1000 mg administered by IV infusions at Weeks 4 and 6 in double blind manner. Participants received standard therapy excluding Immunosuppressants and including anti-malarials, NSAIDs, and/or corticosteroids tapered down to prednisone equivalent of \leq 5 mg/day until Week 104. Participants did not receive treatment after 52 weeks and were in observation until Week 104.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 April 2017	Protocol Amendment 01: GlaxoSmithKline (GSK) received additional comments and feedback from European Medicines Agency (EMA) and Food and Drug Administration (FDA) and incorporated the recommendations in Amendment 1. In addition, further changes and updates were identified by the study team and incorporated in Amendment 1.
17 November 2018	Protocol Amendment 02: 1) To change the timing of the initial analysis from Study Week 64 to Study Week 52 to support an earlier submission to regulatory authorities, 2) Recruit additional 80 participants into the study to ensure adequate number of evaluable participants, and 3) provide clarification of changes and updates on wording related to study conduct.
15 August 2019	Protocol Amendment 03: 1) To define dosing interruptions based on neutrophil count, 2) Incorporate country-specific changes for South Korea, Germany and Argentina into Global Amendment 03 protocol, 3) define an modified Intent to Treat (MITT) Population for analysis, and 4) provide clarification of changes and updates on wording related to study conduct.
30 April 2020	Protocol Amendment 04: In response to the Coronavirus disease-2019 (COVID-19) pandemic, changes are being made in order to protect participant safety and data integrity. 1) Visit windows are being conditionally extended for all participant visits for the study. 2) Clarification that the independent blinded assessor can be called upon to perform the SLEDAI-2K (S2K) efficacy assessment at an unscheduled visit. 3) In the event that participants are unable to visit the site, it is acceptable for sites to supply investigational product (belimumab) to participants by shipment to the participant. 4) Clarification regarding acceptable use and dosage of antimalarial treatments (e.g. hydroxychloroquine). 5) Change to the language describing the timing of the primary analysis. 6) Recommendations for safety contact with participants in the event they cannot attend clinic visits. 7) Guidance for study treatment discontinuation if a participant has suspected or confirmed COVID-19 infection.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
