Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 June 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	01 July 2019
Global end of trial reached?	Yes
Global end of trial date	01 July 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare the clinical benefit of ribociclib plus letrozole versus chemotherapy.

Protection of trial subjects:

All patients received written and verbal information regarding the study at a prior interview with investigator site staff. This information will emphasised that participation in the study is voluntary and that the subject may withdraw from the study at any time and for any reason. All patients were given the opportunity to ask questions about the study and were given sufficient time to decide whether to participate. The IC mentioned which specific data was recorded, collected, processed and could be transferred to European Economic Area (EEA) or non-EEA countries. Personal data was managed in accordance with the applicable legislation in force at the time, and in particular, in accordance with Regulation (EU) No 2016/679 of 27 April 2016 on the protection of individuals with regard to the processing of their personal data (hereinafter, "GDPR"). A copy of the patient information including the signed IC form was provided to the patient.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 July 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 106
Worldwide total number of subjects	106
EEA total number of subjects	106

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	53
From 65 to 84 years	53
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Planned: 94 patients to be recruited. Considering 10% drop-out rate, 104 patients was planned to be included. From July 27, 2017 to December 7, 2018, 198 patients were assessed for eligibility across 21 centres in Spain and 106 were finally recruited.

Pre-assignment

Screening details:

Postmenopausal women with untreated primary operable Hormone receptor positive (HR+)/HER2-negative Luminal B breast cancer according to PAM50 intrinsic subtype

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	letrozole plus ribociclib

Arm description:

The letrozole plus ribociclib treatment consisted of six 28-days cycles of daily letrozole (2.5mg; continuous) and ribociclib (600mg; 3-weeks-on/-week-off). The study investigational treatment was Ribociclib (Kisqali®) provided by Novartis. It was administered as a flat-fixed dose of 600 mg daily (three 200-mg capsules), days 1 to 21 of a 28-days cycle. Letrozole (Femara®) was also supplied by Novartis. Letrozole was administered orally, once per day, days 1 to 28 of a 28 days cycle, at 2.5 mg. Both ribociclib and letrozole were administered orally during 6 cycles and independently of the body surface area or body weight. The ribociclib destined for use in the trial came from batches 1010010567 and WX027; and letrozole from batch SH083

Arm type	Experimental
Investigational medicinal product name	Ribociclib (Kisqali®)
Investigational medicinal product code	L01EF02
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Ribociclib was administered as a flat-fixed dose of 600 mg daily (three 200-mg capsules), days 1 to 21 of a 28-days cycle during 6 cycles.

Investigational medicinal product name	Letrozole
Investigational medicinal product code	L02BG04
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Letrozole (Femara®) was also supplied by Novartis. Letrozole was administered once per day, days 1 to 28 of a 28 days cycle, at 2.5 mg.

Arm title	Chemotherapy
------------------	--------------

Arm description:

The chemotherapy treatment consisted of four cycles of AC (doxorubicin 60 mg/m² and cyclophosphamide 600 mg/m² every 21 days) followed by weekly paclitaxel during 12 weeks. In total, neoadjuvant therapy lasted for 24 weeks in each arm.

Arm type	No intervention

Primary: To evaluate the ability of each treatment strategy to provide ROR-low score at surgery

End point title	To evaluate the ability of each treatment strategy to provide ROR-low score at surgery
End point description: The primary endpoint was to evaluate the rate of ROR-low disease after neoadjuvant treatment (i.e. at surgery) according to the standardized PAM50 assay. ROR score is based on information coming from gene expression data and tumour size and has a range from 0 to 100. ROR-low disease was defined as ≤40 points if node-negative and ≤15 points if 1-3 positive nodes. ROR-intermediate disease was defined as 41-60 points if node-negative and 16-40 points if 1-3 positive nodes. ROR-high disease was defined as 61-100 points if node-negative and 41-100 points if 1-3 positive nodes. All patients with ≥4 node positives were considered ROR-high risk regardless of ROR score.

Statistical analyses

Statistical analysis title	Estimation of ROR-low rates
----------------------------	-----------------------------

Statistical analysis description:

Main analysis is the estimation of ROR-low rates and was described by means of difference of proportions and 95% confidence interval using exact methods based on binomial, ClopperPearson method independently in both treatments groups.

This analysis was performed using ITT approach on ADO data. This primary efficacy analysis was also analyzed using the PP set to test the robustness of the results with the same approach (ADO data)

Comparison groups	letrozole plus ribociclib v Chemotherapy

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Assessment of adverse events and general safety was collected at post-surgery visit. Patients withdrawn from the study before surgery attended to a last follow-up visit 30 days after the administration of the last treatment dose.

Adverse event reporting additional description:

Incidence, duration and severity of Adverse Events (AEs) assessed by the NCI Common Terminology for Classification of Adverse Events (CTCAE) version 4.03, including dose reductions, delays and treatment discontinuations.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 April 2017	Amendment number 1 to the protocol (versión 2.0 27 Apr 2017) The amendment consisted of: 1) The addition of plasma sample collection for biomarker analyses Due to the prevalence of the mutations measured at baseline and post treatment and the levels of ctDNA measured in three time points may provide information on response or resistance to therapy. 2) Expansion to the number of sites: one site was added. 3) Corrections and minor changes 4) Update in the background in reference to clinical trials (MONALEESA 2) 5) Unification of the Prescreening with the Main Informed Consent
15 June 2018	Amendment number 2 to the protocol (Version 3.0 15 June 2018) 1) Change of primary objective and endpoint of the study. 2) Clarify and/or amend of the secondary objectives/endpoints. 3) Clarify/amend some analytical determinations and procedures during the study. 4) Clarify/amend procedures and timelines in Schedule of assessments, especially in reference to the window of collection of tumor sample, randomization and between last dose of ribociclib and surgery. 5) Minor changes as grammatical, typographical and administrative corrections, as well as the addition of new references.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
