Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002079-PIP01-16
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 February 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	07 February 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study was to evaluate the long-term safety of multiple doses of ALN-GO1 in subjects with primary hyperoxaluria type 1 (PH1).

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form (ICF).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 April 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 2
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	France: 7
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	Israel: 7
Worldwide total number of subjects	20
EEA total number of subjects	10

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	10
Adolescents (12-17 years)	6
Adults (18-64 years)	4
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Subjects took part in the study at 9 study centers in France, Germany, Israel, Netherlands, and the United Kingdom from 04 April 2018 to 07 February 2023. A total of 20 subjects previously treated in Study 001B (2015-004407-23) were enrolled and treated within this study.

Pre-assignment

Screening details:

The cumulative dose of lumasiran administered over 6 months was the same for both 1 mg/kg QM & 3 mg/kg Q3M, these subjects were pooled into one arm as recommended by the Safety Review Committee (SRC). As pre-specified in the SAP, subjects who began treatment at 1 mg/kg QM, then transitioned to 3 mg/kg Q3M were to be summarised as a single group.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Lumasiran (ALN-GO1): 1.0 mg/kg QM or 3.0 mg/kg Q3M

Arm description:

Subjects enrolling from study 001B, received lumasiran, subcutaneous (SC) injection, at a starting dose of 1.0 milligrams per kilograms (mg/kg) once monthly (QM) or 3.0 mg/kg once every 3 months (Q3M) from Day 1 up to a maximum of Month 6. By Month 6, all subjects were approved to change dose and/or dosing regimen to receive lumasiran, SC injection at a dose of 3.0 mg/kg, Q3M, up to Month 51 of the treatment period.

All 3 subjects who began treatment at 1 mg/kg QM transitioned to 3 mg/kg Q3M regimen by Month 6. As the cumulative dose administered over 6 months was the same for both 1 mg/kg QM & 3 mg/kg Q3M, these subjects were pooled into one arm as recommended by the SRC.

Arm type	Experimental
Investigational medicinal product name	Lumasiran
Investigational medicinal product code	ALN-GO1
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Lumasiran, SC injection, administered at a starting dose of 1.0 mg/kg, QM or 3.0 mg/kg Q3M from Day 1 up to a maximum of Month 6. By Month 6, lumasiran, SC injection was administered at a dose of 3.0 mg/kg, Q3M, up to Month 51 of the treatment period.

Arm title	Lumasiran (ALN-GO1): 3.0 mg/kg QM
------------------	-----------------------------------

Arm description:

Subjects enrolling from study 001B, received lumasiran, SC injection, at a starting dose of 3.0 mg/kg, QM, from Day 1 up to a maximum of Month 21. By Month 21, all subjects were approved to change dosing regimen to receive lumasiran, SC injection, at a dose of 3.0 mg/kg, Q3M, up to Month 51 of the treatment period.

Arm type	Experimental
Investigational medicinal product name	Lumasiran
Investigational medicinal product code	ALN-GO1
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Lumasiran, SC injection, administered at a starting dose of 3.0 mg/kg, QM, from Day 1 up to a maximum of Month 21. By Month 21, lumasiran, SC injection, was administered at a dose of 3.0 mg/kg, Q3M, up to Month 51 of the treatment period.

By Month 21, all subjects were approved to change dosing regimen to receive lumasiran, SC injection, at a dose of 3.0 mg/kg, Q3M, up to Month 51 of the treatment period.

Primary: Number of Subjects With at Least One Adverse Event (AE)

End point title	Number of Subjects With at Least One Adverse Event (AE) ^[1]
-----------------	--

End point description:

AE is any untoward medical occurrence in a subject or clinical investigational participant administered a medicinal product and which does not necessarily have a causal relationship with this treatment. Safety analysis set included all subjects who received any amount of study drug. The cumulative dose of lumasiran administered over 6 months was the same for both 1 mg/kg QM & 3 mg/kg Q3M, these subjects were pooled into one arm as recommended by the SRC. As pre-specified in the SAP, subjects who began treatment at 1 mg/kg QM, then transitioned to 3 mg/kg Q3M were to be summarized as a single group. All 3 subjects who began treatment at 1 mg/kg QM transitioned to 3 mg/kg Q3M regimen by Month 6.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (Day -1) up to 54 months

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analysis was planned for this outcome measure.

Statistical analyses

Secondary: Change From Baseline in 24-hour Urinary Oxalate Corrected for Body Surface Area (BSA) at 54 Months

End point title	Change From Baseline in 24-hour Urinary Oxalate Corrected for Body Surface Area (BSA) at 54 Months
-----------------	--

End point description:

Oxalate produced by liver is the key toxic metabolite driving disease pathology in subjects with PH1. Risk of disease complications increase as oxalate levels increase. 24-hour (urinary oxalate (millimole [mmol]/ 24 hour [h]/1.73 meters squared [m^2]) corrected for BSA at each visit per subject was calculated. Baseline=derived baseline value from lumasiran treated period of Study ALN-GO1-001. Negative change from baseline indicated favorable outcome. Pharmacodynamic (PD) analysis set included all subjects who received any amount of study drug & had at least 1 post-dose urine sample for PD. Overall number analysed = number of subjects with data available for analysis. The cumulative dose of lumasiran administered over 6 months was the same for both 1 mg/kg QM & 3 mg/kg Q3M, these subjects were pooled into one arm as recommended by the SRC. As pre-specified in the SAP, subjects who began treatment at 1 mg/kg QM, then transitioned to 3 mg/kg Q3M were to be summarised as a single group.

Secondary: Change From Baseline in Estimated Glomerular Filtration Rate (eGFR) at 54 Months

End point title	Change From Baseline in Estimated Glomerular Filtration Rate (eGFR) at 54 Months
-----------------	--

End point description:

Baseline was defined as last measurement prior to the first dose of lumasiran in the ALN-GO1-001 study. eGFR was calculated based on Modification of Diet in Renal Disease (MDRD) formula for subjects ≥ 18 years of age at enrollment & Schwartz Bedside formula for subjects < 18 years of age at enrollment. eGFR per MDRD formula was calculated as follows: $\text{eGFR (mL/min/1.73 m}^2\text{)} = 175 \times (\text{serum creatinine \{SCr\} } [\mu\text{mol/deciliter(dL)}]/88.4)^{-1.154} \times (\text{age})^{-0.203} \times (0.742, \text{ if female}), \text{ or } \times (1.212, \text{ if African American})$ or based on Schwartz formula: $\text{eGFR (mL/min/1.73m}^2\text{)} = (36.2 \times \text{height [cm]}) / \text{SCr } (\mu\text{mol /dL})$. Safety analysis set included all subjects who received any amount of study drug. Cumulative dose of lumasiran administered over 6 months was the same for both 1 mg/kg QM & 3 mg/kg Q3M, these subjects were pooled into one arm as recommended by the SRC. As pre-specified in the SAP, subjects who began treatment at 1 mg/kg QM, then transitioned to 3 mg/kg Q3M were to be summarised as a single group.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 August 2019	<p>The primary purpose for this protocol amendment was to extend the study duration from up to 2 years to up to 54 months. In addition, the amendment:</p> <ul style="list-style-type: none">• Updated adverse event of clinical interest (AECI)• Added liver function test (LFT) criteria for withholding, monitoring, and stopping study drug dosing to align with other studies of lumasiran• Provided dosing information for subjects who progress to end-stage renal disease (ESRD) and require dialysis, a potential occurrence in PH1 subjects.
04 May 2020	<p>The primary purpose for this protocol amendment was to incorporate urgent safety measures (USMs) that were communicated to investigators in a Dear Investigator Letter to assure the safety of study subjects while minimizing risks to study integrity amid the Coronavirus disease 2019 (COVID-19) pandemic. Changes not related to USMs were also incorporated.</p> <ul style="list-style-type: none">• Permitted lumasiran administration at locations other than study center that had undergone appropriate training• Allowed assessment of AEs and concomitant medication to be conducted offsite• Expanded study assessment window to ± 28 days at Month 12 and ± 14 days thereafter• Allowed, after 12 months, renal ultrasound and ECG assessments to be completed up to 9 months after intended time point.• Removed quality of life (QOL) questionnaire and assessment as part of the exploratory objective and endpoint.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
