Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 July 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 July 2021
Global end of trial reached?	Yes
Global end of trial date	27 July 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of rucaparib based on the response rate in metastatic castration-resistant prostate cancer (mCRPC) patients with homologous recombination deficiency (HRD) who progressed on AR-targeted therapy (abiraterone acetate, enzalutamide, apalutamide or investigational AR-targeted agent) and taxane-based chemotherapy in the castration resistant setting

Protection of trial subjects:

Safety was assessed by evaluating hematology, biochemistry, urinalysis, vital signs, and changes in physical examination, and by monitoring the incidence, severity, and relationship of adverse events to rucaparib. Safety data was periodically reviewed by a Data Monitoring Committee (DMC). The DMC was comprised of study investigators and sponsor representatives.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 February 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 29
Country: Number of subjects enrolled	United Kingdom: 15
Country: Number of subjects enrolled	Belgium: 10
Country: Number of subjects enrolled	Denmark: 5
Country: Number of subjects enrolled	France: 25
Country: Number of subjects enrolled	Germany: 20
Country: Number of subjects enrolled	Ireland: 12
Country: Number of subjects enrolled	Italy: 9
Country: Number of subjects enrolled	Israel: 7
Country: Number of subjects enrolled	United States: 113
Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	Australia: 25
Worldwide total number of subjects	277
EEA total number of subjects	110

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	65
From 65 to 84 years	205
85 years and over	7

Subject disposition

Recruitment

Recruitment details:

A total of 277 patients were recruited from 102 sites across 12 countries.

Pre-assignment

Screening details:

After providing consent to participate, patients with a deleterious BRCA1/2, ATM, or other HRR gene mutation underwent Screening assessments within 28 days prior to the first dose of rucaparib.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	BRCA Mutation

Arm description:

Patients with a deleterious BRCA (breast cancer susceptibility gene) mutation detected in their tumor.

Arm type	Experimental
Investigational medicinal product name	Rucaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

All patients received open-label oral rucaparib 600 mg BID in continuous 28-day cycles. Patients were to take rucaparib with or without food.

Arm title	ATM Mutation
------------------	--------------

Arm description:

Patients with a deleterious ATM (ataxia telangiectasia mutated serine/threonine kinase) mutation detected in their tumor.

Arm type	Experimental
Investigational medicinal product name	Rucaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

All patients received open-label oral rucaparib 600 mg BID in continuous 28-day cycles. Patients were to take rucaparib with or without food.

Arm title	CDK12 Mutation
------------------	----------------

Arm description:

Patients with a deleterious CDK12 (Cyclin-dependent kinase 12) mutation detected in their tumor.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Rucaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

All patients received open-label oral rucaparib 600 mg BID in continuous 28-day cycles. Patients were to take rucaparib with or without food.

Arm title	CHEK2 Mutation
------------------	----------------

Arm description:

Patients with a deleterious CHEK2 (Checkpoint Kinase 2) mutation detected in their tumor.

Arm type	Experimental
Investigational medicinal product name	Rucaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

All patients received open-label oral rucaparib 600 mg BID in continuous 28-day cycles. Patients were to take rucaparib with or without food.

Arm title	Other Gene Mutation
------------------	---------------------

Arm description:

Patients with other deleterious HRR (homologous recombination repair) gene mutation detected in their tumor.

Arm type	Experimental
Investigational medicinal product name	Rucaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

All patients received open-label oral rucaparib 600 mg BID in continuous 28-day cycles. Patients were to take rucaparib with or without food.

Number of subjects in period 1	BRCA Mutation	ATM Mutation	CDK12 Mutation

Primary: Confirmed Objective Response Rate (ORR) by Gene in Patients With Measurable Disease at Baseline Per Central Independent Radiology Review (IRR)

End point title	Confirmed Objective Response Rate (ORR) by Gene in Patients With Measurable Disease at Baseline Per Central Independent Radiology Review (IRR) ^[1]
End point description: The primary efficacy endpoint is confirmed radiographic ORR by central IRR. ORR is defined as the percentage of patients with a confirmed CR (complete response) or PR (partial response) by mRECIST (modified Response Evaluation Criteria in Solid Tumors) v1.1/PCWG3 (Prostate Cancer Working Group 3) criteria. The confirmed response is defined as a CR or PR on subsequent tumor assessment at least 28 days after first response documentation in the absence of confirmed progression in bone. CR is disappearance of all target and non-target lesions; any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm. PR is at least a 30% decrease in the sum of the diameters of target lesions, taking as reference the baseline sum diameters.	
End point type	Primary
End point timeframe: Assessments every 8 weeks from study day 1 for the first 24 weeks, and then every 12 weeks until disease progression, death, or initiation of subsequent treatment. Total follow-up was up to approximately 3 years.	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical analyses are done for single arm studies. We present confidence intervals for ORR.

Secondary: Duration of Response (DOR) by Gene in Patients With Confirmed Response Per Central Independent Radiology Review (IRR)

End point title	Duration of Response (DOR) by Gene in Patients With Confirmed Response Per Central Independent Radiology Review (IRR) ^[2]
-----------------	--

End point description:

A secondary efficacy endpoint is DOR by central IRR. The DOR is defined as the time from the date that a confirmed response per modified RECIST Version 1.1/PCWG3 is first reported to the time that progressive disease (PD) is first documented. Progressive disease is defined using RECIST v1.1, as at least a 20% increase in the sum of the diameters of target lesions, or an unequivocal increase in non-target lesions, or the appearance of new lesions. PCWG3 criteria is used to document evidence of disease progression in bone lesions.

End point type	Secondary
----------------	-----------

End point timeframe:

Assessments every 8 weeks from study day 1 for the first 24 weeks, and then every 12 weeks until disease progression, death, or initiation of subsequent treatment. Total follow-up was up to approximately 3 years.

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: There were no patients with confirmed response by IRR in the ATM, CDK12 and CHEK2 arms.

End point values	BRCA Mutation	Other Gene Mutation		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	37 ^[3]	7 ^[4]		
Units: months				
median (confidence interval 95%)	15.5 (6.4 to 36.2)	22.1 (10.1 to 31.4)		

Notes:

[3] - Upper confidence interval not available due to insufficient number of patients so max 36.2 is noted.

[4] - Upper confidence interval not available due to insufficient number of patients so max 31.4 is noted.

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of Response (DOR) by Gene in Patients With Confirmed Response Per Investigator

End point title	Duration of Response (DOR) by Gene in Patients With Confirmed Response Per Investigator ^[5]
-----------------	--

End point description:

A secondary efficacy endpoint is DOR as assessed by the investigator. The DOR is defined as the time from the date that a confirmed response per modified RECIST Version 1.1/PCWG3 is first reported to the time that progressive disease (PD) is first documented. Progressive disease is defined using RECIST v1.1, as at least a 20% increase in the sum of the diameters of target lesions, or an unequivocal

in non-target lesions, or the appearance of new lesions. PCWG3 criteria is used to document evidence of disease progression in bone lesions.

End point type	Secondary
----------------	-----------

End point timeframe:

Assessments every 8 weeks from study day 1 for the first 24 weeks, and then every 12 weeks until disease progression, death, or initiation of subsequent treatment. Total follow-up was up to approximately 3 years.

Notes:

[5] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: There were no patients with confirmed response by investigator in the CDK12 arm.

End point values	BRCA Mutation	ATM Mutation	CHEK2 Mutation	Other Gene Mutation

Secondary: Confirmed PSA Response ($\geq 50\%$ Decrease) by Gene as Assessed by Local Laboratory

End point title	Confirmed PSA Response ($\geq 50\%$ Decrease) by Gene as Assessed by Local Laboratory
-----------------	--

End point description:

A secondary endpoint is confirmed PSA (prostate-specific antigen) response ($\geq 50\%$ reduction) as assessed by local laboratory. Confirmed PSA response is analyzed for all patients who had PSA value at baseline and is defined as the percentage of patients having 2 consecutive PSA values (at least 3 weeks apart) that are at least 50% lower than baseline and that occur prior to PSA progression. PSA progression is defined as a $\geq 25\%$ increase and absolute increase of ≥ 2 ng/mL above the nadir in PSA.

End point type	Secondary
----------------	-----------

End point timeframe:

PSA assessments were done at baseline, Week 5, Week 9, every 4 weeks thereafter, and at Treatment Discontinuation. Total follow-up was up to approximately 39 months.

Secondary: Time to PSA Progression by Gene

End point title	Time to PSA Progression by Gene
End point description:	
A secondary efficacy endpoint is time to PSA progression. Time to PSA progression is defined as the time from first dose of rucaparib to the date that a $\geq 25\%$ increase and absolute increase of ≥ 2 ng/mL above the nadir (or baseline if there was no PSA decline after baseline) in PSA was measured, plus 1 day. The increase must be confirmed by a second consecutive assessment conducted at least 3 weeks later (unless the PSA progression occurred at the last recorded PSA assessment). If confirmed, the date used for time of PSA progression is the earlier of the 2 PSA dates.	
End point type	Secondary
End point timeframe:	
PSA assessments were done at baseline, Week 5, Week 9, every 4 weeks thereafter, and at Treatment Discontinuation. Total follow-up was up to approximately 39 months.	

End point values	BRCA Mutation	ATM Mutation	CDK12 Mutation	CHEK2 Mutation
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group
Number of subjects analysed	172	59	14	7 ^[10]
Units: months				
median (confidence interval 95%)	6.5 (5.7 to 7.5)	3.1 (2.8 to 3.7)	3.5 (2.8 to 4.6)	5.6 (2.8 to 24.9)

Notes:

[10] - Upper confidence interval not available due to insufficient number of patients so max 24.9 is noted.

Secondary: Steady State Trough (Cmin) Level Rucaparib Concentrations

End point title	Steady State Trough (Cmin) Level Rucaparib Concentrations
End point description:	
Trough (Cmin) concentrations of rucaparib are summarized for all patients with at least one PK sample collected. The absolute values of rucaparib plasma concentration at each time point are presented by gene.	
End point type	Secondary
End point timeframe:	
Participants were assessed at Study Day 29, Day 57, Day 85 and Day 113

Skin and subcutaneous tissue disorders			
Dry skin			
subjects affected / exposed	18 / 277 (6.50%)		
occurrences (all)	20		
Photosensitivity reaction			
subjects affected / exposed	19 / 277 (6.86%)		
occurrences (all)	22		
Rash			
subjects affected / exposed	22 / 277 (7.94%)		
occurrences (all)	27		
Renal and urinary disorders			

Haematuria subjects affected / exposed occurrences (all)	24 / 277 (8.66%) 46		
Musculoskeletal and connective tissue disorders			
Arthralgia subjects affected / exposed occurrences (all)	44 / 277 (15.88%) 65		
Back pain subjects affected / exposed occurrences (all)	51 / 277 (18.41%) 74		
Bone pain subjects affected / exposed occurrences (all)	18 / 277 (6.50%) 26		
Muscular weakness subjects affected / exposed occurrences (all)	17 / 277 (6.14%) 21		
Musculoskeletal chest pain subjects affected / exposed occurrences (all)	14 / 277 (5.05%) 17		
Musculoskeletal pain subjects affected / exposed occurrences (all)	34 / 277 (12.27%) 41		
Myalgia subjects affected / exposed occurrences (all)	14 / 277 (5.05%) 16		
Pain in extremity subjects affected / exposed occurrences (all)	33 / 277 (11.91%) 49		
Infections and infestations			
Upper respiratory tract infection subjects affected / exposed occurrences (all)	20 / 277 (7.22%) 24		
Urinary tract infection subjects affected / exposed occurrences (all)	39 / 277 (14.08%) 60		
Metabolism and nutrition disorders			

Decreased appetite subjects affected / exposed occurrences (all)	96 / 277 (34.66%) 137		
Dehydration subjects affected / exposed occurrences (all)	15 / 277 (5.42%) 22		
Hypocalcaemia subjects affected / exposed occurrences (all)	21 / 277 (7.58%) 35		
Hypophosphataemia subjects affected / exposed occurrences (all)	27 / 277 (9.75%) 44		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 October 2016	Added monitoring and management guidelines for anemia and MDS/AML because these events were reported with rucaparib as with other PARP inhibitors. Added language describing when treatment beyond radiographic progression may be appropriate. Added study drug interruption and discontinuation criteria for cases of DILI per Hy's Law. Clarified that bone scans were to be performed at each time of disease assessment, in addition to CT/MRI, to follow PCWG3 guidelines.
12 December 2017	Updated the inclusion criterion for renal function. Updated inclusion criterion 11 to avoid exposure of the partners of male patients to semen containing rucaparib. Included and emphasized specific warnings and protection measures regarding photosensitivity. Updated precautions related to concomitant medications, particularly for CYP drugs.
12 June 2018	Agents that target the AR pathway that are given for metastatic hormone-sensitive prostate cancer and for non-metastatic CRPC were now considered to meet prior AR-directed therapy requirements. Removed collection of blood samples for CTC analysis as exploratory analysis indicated an overall lack of feasibility.
24 August 2020	The sponsor designated pneumonitis as an AESI in response to a request from the US FDA. Updated the interval from 6 months to 3 months after the last dose of study drug for which men must use contraceptive measures or abstinence or refrain from donating semen.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
