Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 July 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 July 2018
Global end of trial reached?	Yes
Global end of trial date	18 July 2018
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to demonstrate the efficacy of fremanezumab in the prevention of chronic cluster headache (CCH) in adult participants.

Protection of trial subjects:

This study was conducted in full accordance with the International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) Consolidated Guideline (E6) and any applicable national and local laws and regulations (for example, Code of Federal Regulations [CFR] Title 21, Parts 50, 54, 56, 312, and 314; European Union (EU) Directive 2001/20/EC on the approximation of the laws, regulations, and administrative provisions of the Member States relating to the implementation of good clinical practice in the conduct of clinical trials on medicinal products for human use).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 January 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Country: Number of subjects enrolled	Netherlands: 17
Country: Number of subjects enrolled	Poland: 3
Country: Number of subjects enrolled	Sweden: 3
Worldwide total number of subjects	259
EEA total number of subjects	118

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	245
From 65 to 84 years	14
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants with a history of CCH were enrolled. Eligible participants entered baseline cluster headache (CH) attack information into an electronic diary device daily for greater than or equal to (\geq)4 weeks during the Baseline Period.

Pre-assignment

Screening details:

A total of 259 participants were randomly assigned with stratification based on sex, country, and baseline concomitant preventive medication use (yes/no) to either placebo, fremanezumab 675/225/225 milligrams (mg), or fremanezumab 900/225/225 mg treatment groups in a 1:1:1 ratio.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received placebo via an approximately 1-hour intravenous infusion and as 3 subcutaneous injections at Week 0 followed by placebo administered as single subcutaneous injections at Weeks 4 and 8.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use, Intravenous use

Dosage and administration details:

Placebo matching to fremanezumab will be administered as per the schedule specified in the respective arms.

Arm title	Fremanezumab 675/225/225 mg
------------------	-----------------------------

Arm description:

Participants received placebo via an approximately 1-hour intravenous infusion and fremanezumab at 675 mg as 3 subcutaneous injections (225 mg/1.5 milliliters [mL]) at Week 0 followed by fremanezumab at 225 mg administered as single subcutaneous injections (225 mg/1.5 mL) at Weeks 4 and 8.

Arm type	Experimental
Investigational medicinal product name	Fremanezumab
Investigational medicinal product code	
Other name	TEV-48125
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use, Intravenous use

Dosage and administration details:

Fremanezumab will be administered as per the dose and schedule specified in the respective arms.

Arm title	Fremanezumab 900/225/225 mg
------------------	-----------------------------

Arm description:

Participants received fremanezumab at 900 mg via an approximately 1-hour intravenous infusion and

placebo administered as 3 subcutaneous injections at Week 0 followed by fremanezumab at 225 mg administered as single subcutaneous injections (225 mg/1.5 mL) at Weeks 4 and 8.

Arm type	Experimental
Investigational medicinal product name	Fremanezumab
Investigational medicinal product code	
Other name	TEV-48125
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use, Intravenous use

Dosage and administration details:

Fremanezumab will be administered as per the dose and schedule specified in the respective arms.

Secondary: Number of Participants who Perceived Improvement of CH-Associated Pain From Baseline as Measured by the Patient-Perceived Satisfactory Improvement (PPSI) Scale at Weeks 1, 4, 8, and 12

End point title	Number of Participants who Perceived Improvement of CH-Associated Pain From Baseline as Measured by the Patient-Perceived Satisfactory Improvement (PPSI) Scale at Weeks 1, 4, 8, and 12
-----------------	--

End point description:

The PPSI assessment was developed to measure pain intensity and was adjusted for CH symptoms improvement. Participants marked the level of CH-associated pain and indicated if pain is "1=much worse," "2=moderately worse," "3=slightly worse," "4=unchanged," "5=slightly improved," "6=moderately improved," or "much improved" compared with 4 weeks prior. PPSI was defined as the change in pain that corresponds with a minimal rating of "7=slightly improved." Data at Week 1 was recorded on Day 7 in the electronic diary device at home. Week 12 data also included assessment at the early withdrawal visit for participants who discontinued the study early. Full analysis set included all randomized participants who received at least 1 dose of study drug and had at least 10 days of postbaseline efficacy assessments by the Week 12 assessment.

Secondary: Number of Participants with Adverse Events (AEs)

End point title	Number of Participants with Adverse Events (AEs)
-----------------	--

End point description:

An AE was defined as any untoward medical occurrence that develops or worsens in severity during conduct of a clinical study and does not necessarily have a causal relationship to the study drug. Severity was rated by the Investigator on a scale of mild, moderate and severe, with severe as an AE that prevents usual activities. Relationship of AE to treatment was determined by the Investigator. Serious AEs include death, a life-threatening adverse event, inpatient hospitalization or prolongation of existing hospitalization, persistent or significant disability or incapacity, a congenital anomaly or birth defect, or an important medical event that jeopardized the participant and required medical intervention to prevent the previously listed serious outcomes. A summary of other non-serious AEs and all serious AEs, regardless of causality is located in Reported AE section. Safety population included all randomized participants who received at least 1 dose of study drug.

Secondary: Number of Participants with Suicidal Ideation and Suicidal Behavior as Assessed by the Electronic Columbia Suicide Severity Rating Scale (eC-SSRS)

End point title	Number of Participants with Suicidal Ideation and Suicidal Behavior as Assessed by the Electronic Columbia Suicide Severity Rating Scale (eC-SSRS)
-----------------	--

End point description:

eC-SSRS is a questionnaire to assess suicidal ideation and suicidal behavior. Suicidal behavior was defined as a "yes" answer to any of 5 suicidal behavior questions: preparatory acts or behavior, aborted attempt, interrupted attempt, actual attempt, and completed suicide. Suicidal ideation was defined as a "yes" answer to any one of 5 suicidal ideation questions: wish to be dead, non-specific active suicidal thoughts, active suicidal ideation with methods without intent to act or some intent to act, without specific plan or with specific plan and intent, any self-injurious behavior with no suicidal intent. Safety population included all randomized participants who received at least 1 dose of study drug.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 May 2017	The primary reason for this amendment was to provide clarification based on feedback from participating Investigators and regulatory agencies.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Futility analysis revealed that the primary endpoint is unlikely to be met. There were no safety concerns observed with fremanezumab treatment in the trial.
--

Notes:
