**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 July 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 July 2020
Global end of trial reached?	Yes
Global end of trial date	20 July 2020
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the efficacy of filgotinib, when compared to placebo, in establishing clinical remission defined as crohn's disease activity index (CDAI) < 150, at Week 24 in participants with crohn's disease (CD) involving the small bowel. Participants had the option to enter a separate long-term extension study if they met the eligibility requirements.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements. This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 April 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 38
Country: Number of subjects enrolled	Canada: 5
Country: Number of subjects enrolled	Ukraine: 3
Country: Number of subjects enrolled	Spain: 3
Country: Number of subjects enrolled	United Kingdom: 7
Country: Number of subjects enrolled	Austria: 2
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Czechia: 1
Country: Number of subjects enrolled	France: 5
Country: Number of subjects enrolled	Germany: 3
Country: Number of subjects enrolled	Hungary: 4
Country: Number of subjects enrolled	Italy: 5
Worldwide total number of subjects	78
EEA total number of subjects	25

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	71
From 65 to 84 years	7
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Participants were enrolled at study sites in the United States, Canada, and Europe. The first participant was screened on 11 April 2017. The last study visit occurred on 20 July 2020.

### Pre-assignment

Screening details:

198 participants were screened.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Filgotinib 200 mg

Arm description:

Filgotinib 200 mg tablet + placebo to match (PTM) filgotinib 100 mg tablet orally once daily for up to 27 weeks.

Arm type	Experimental
Investigational medicinal product name	Filgotinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

200 mg tablet administered once daily

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

PTM filgotinib 100 mg administered once daily

<b>Arm title</b>	Filgotinib 100 mg
------------------	-------------------

Arm description:

Filgotinib 100 mg tablet + PTM filgotinib 200 mg tablet orally once daily for up to 26.3 weeks.

Arm type	Experimental
Investigational medicinal product name	Filgotinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

100 mg tablet administered once daily

## Secondary: Change From Baseline in Terminal Ileum Segmental Magnetic Resonance Index of Activity (MaRIA) Score at Week 24

End point title	Change From Baseline in Terminal Ileum Segmental Magnetic Resonance Index of Activity (MaRIA) Score at Week 24
-----------------	--

End point description:

Magnetic resonance enterography (MRE) is an imaging technique to evaluate disease activity in CD. MaRIA is an MRE-based scoring system, a composite index of 4 components. They are edema, ulcers, gut wall thickness, and relative contrast enhancement (RCE). A segmental MaRIA score is calculated at screening (used as the baseline) and Week 24 as a weighted sum of these components for the terminal ileum segment of the small bowel. A segmental score of  $\geq 7$  indicates active inflammation and a score of  $\geq 11$  indicates the presence of an ulcer. Segmental scores less than 7 indicates remission. The MaRIA score ranges from approximately 0 to 31, for any given segment. A higher score indicates more severe disease. Difference in least squared means (Diff in LSM) were from analysis of covariance (ANCOVA) model. A negative change from baseline indicates improvement and a positive change from baseline indicates disease worsening. Participants in the Full Analysis Set were analyzed.

The MaRIA scoring system is a composite index of 4 components. These components are edema, ulcers, gut wall thickness, and RCE. A segmental MaRIA score can be calculated at screening (used as the baseline) and Week 24 as a weighted sum of these 4 components for each of the 3 small bowel segment. The MaRIA score ranges from approximately 0 to 31, for any given segment. A higher score indicates more severe disease. MaRIA response was defined as a segmental MaRIA score < 11 with baseline score  $\geq 11$ , or a segmental MaRIA score < 7 with baseline score < 11, or  $\geq$  minimum detectable difference (MDD) units decrease from baseline score for segments with baseline MaRIA score  $\geq 7$  in the terminal ileum. For segments with baseline MaRIA score  $\geq 15$ , the MDD is 6.5 units and for baseline MaRIA score < 15, the MDD is 4.0 units. Participants in the Full Analysis Set with active disease (segmental MaRIA score  $\geq 7$ ) in terminal ileum segment at baseline, were analyzed.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All-Cause Mortality: First dose date up to last dose date (maximum: 28.7 weeks) plus 59 days; Adverse Events: First dose date up to last dose date (maximum: 28.7 weeks) plus 30 days

Adverse event reporting additional description:

All-Cause Mortality: All Randomized Analysis Set included all participants who were randomized in the study; Adverse Events: Safety Analysis Set included all participants who received at least 1 dose of study drug.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 December 2016	<ul style="list-style-type: none"> <li>Added a data monitoring committee (DMC)</li> <li>Updated secondary endpoints language for consistency with the secondary objectives and the definition of terms</li> <li>Moved definitions of efficacy related to MaRIA scores from the study objectives to the definition of terms</li> <li>Added requirement to assess coagulation parameters for instances where aspartate transaminase (AST) or alanine transaminase (ALT) is <math>&gt;3 \times</math> upper limit of normal (ULN)</li> <li>Extended requirement for maintaining a stable prescribed dose of corticosteroids prior to randomization</li> <li>Updated requirements for storage and handling of study drugs</li> <li>Added natalizumab, leflunomide, and lymphocyte-depleting therapies to the list of prohibited concomitant medications</li> <li>Provided a rationale for the exclusion of potent P-gp inducers</li> <li>Deleted appendix 5 and renumbered subsequent appendices. Moved information pertaining to subject preparation for MRE acquisition from appendix 5 to Section 6. Removed technical aspects of MRE acquisition</li> <li>Added hepatitis B virus (HBV) surface antibody test and HBV core antibody test to screening</li> <li>Removed details of MaRIA segmental score calculation from appendix 5</li> </ul>
26 June 2017	<ul style="list-style-type: none"> <li>Added study duration</li> <li>Updated background information with emerging relevant clinical data and to ensure consistency with Edition 12 of the Investigator's Brochure for filgotinib</li> <li>Added formula for creatinine clearance (CL<sub>cr</sub>) calculation</li> <li>Updated biomarker language to align with Gilead's current protocol template</li> <li>Updated inclusion criterion to add ustekinumab as possible therapy of previously demonstrated inadequate response</li> <li>Updated inclusion criterion to clarify that QuantiFERON tuberculosis testing may not be repeated except in the case of a single repeat for indeterminate results</li> <li>Added a new inclusion criterion to ensure standard of care colorectal cancer screening for patient population</li> <li>Updated exclusion criteria to remove tattoo as a contraindication to MRE examination</li> <li>Updated exclusion criteria to clarify exclusion of subjects with subtotal colectomy</li> <li>Updated exclusion criteria to clarify the required washout period before entry of subjects who have been previously treated with ustekinumab</li> <li>Added guidance for missed doses</li> <li>Added guidance for initiation of new induction therapies prior to screening</li> <li>Added instructions for budesonide taper</li> <li>Added detailed descriptions of key assessments</li> <li>Updated safety reporting language to align with Gilead's current protocol template</li> <li>Added wording to the informed consent process to ensure investigators counsel male participants on the associated risks of male infertility</li> <li>Added urinalysis to Week 24</li> <li>Separated fasting lipids from serum chemistry</li> <li>Defined the duration of fasting</li> <li>Removed fasting requirement from screening</li> <li>Updated Appendix 7 based on findings of a drug-drug interaction (DDI) study for filgotinib and hormonal contraceptives and to clarify the definitions of childbearing potential</li> </ul>

04 February 2020	<ul style="list-style-type: none"> <li>• Updated study secondary and exploratory endpoints</li> <li>• Updates were made to include discontinuation criteria for thromboembolic events at the request of US Food and Drug Administration (FDA)</li> <li>• Included a criterion to trigger an ad hoc DMC meeting at the request of the US FDA</li> <li>• Added description of a cardiovascular safety endpoint adjudication committee (CVEAC) that Gilead established at the request of the US FDA</li> <li>• Included new guidance for HBV deoxyribonucleic acid (DNA) screening and surveillance</li> </ul>
