

Clinical trial results:

A Phase 2 Proof-of-Concept Study to Separately Evaluate the Activity of Talacotuzumab (JNJ-56022473) or Daratumumab in Transfusion-Dependent Subjects with Low or Intermediate-1 Risk Myelodysplastic Syndromes (MDS) who are Relapsed or Refractory to Erythropoiesis-Stimulating Agent (ESA) Treatment

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 January 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	23 January 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the trial was to evaluate the efficacy (transfusion independence [TI]) of daratumumab in red blood cell (RBC) transfusion-dependent subjects with low or intermediate-1-risk myelodysplastic syndromes (MDS) whose disease had relapsed during treatment with or was refractory to erythropoiesis-stimulating agents (ESAs) (after enrollment in the talacotuzumab arm was stopped).

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the declaration of helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 March 2017
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	1 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 7
Country: Number of subjects enrolled	Spain: 10
Country: Number of subjects enrolled	Italy: 3
Country: Number of subjects enrolled	Netherlands: 3
Country: Number of subjects enrolled	Russian Federation: 3
Country: Number of subjects enrolled	United States: 8
Worldwide total number of subjects	34
EEA total number of subjects	23

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	6
From 65 to 84 years	28
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Out of 34 enrolled subjects, 33 subjects received daratumumab and 1 subject received talacotuzumab. Due to serious infusion-related reaction (IRR) event that occurred in first subject enrolled in talacotuzumab arm, no further subjects were enrolled and no primary assessments were conducted for the single subject assigned to talacotuzumab arm.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Talacotuzumab
------------------	---------------

Arm description:

Subjects received a single dose of talacotuzumab 9 milligram per kilogram (mg/kg) intravenously (IV) every two weeks.

Arm type	Experimental
Investigational medicinal product name	Talacotuzumab
Investigational medicinal product code	
Other name	JNJ-56022473
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Talacotuzumab 9 mg/kg was administered intravenously (IV) as a single dose every two weeks.

Arm title	Daratumumab
------------------	-------------

Arm description:

Subjects received daratumumab 16 mg/kg IV weekly on Weeks 1 to 8 (on Days 1, 8, 15, and 22 of Cycles 1 and 2), every 2 weeks from Weeks 9 to 24 (on Days 1 and 15 of Cycles 3 to 6), and every 4 weeks thereafter (on Day 1 for all subsequent cycles). Each treatment cycle was of 28 days.

Arm type	Experimental
Investigational medicinal product name	Daratumumab
Investigational medicinal product code	
Other name	JNJ-54767414
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Daratumumab 16 mg/kg was administered IV weekly on Weeks 1 to 8 (on Days 1, 8, 15, and 22 of Cycles 1 and 2), every 2 weeks from Weeks 9 to 24 (on Days 1 and 15 of Cycles 3 to 6), and every 4 weeks thereafter (on Day 1 for all subsequent cycles).

End points

End points reporting groups

Reporting group title	Talacotuzumab
Reporting group description: Subjects received a single dose of talacotuzumab 9 milligram per kilogram (mg/kg) intravenously (IV) every two weeks.	
Reporting group title	Daratumumab
Reporting group description: Subjects received daratumumab 16 mg/kg IV weekly on Weeks 1 to 8 (on Days 1, 8, 15, and 22 of Cycles 1 and 2), every 2 weeks from Weeks 9 to 24 (on Days 1 and 15 of Cycles 3 to 6), and every 4 weeks thereafter (on Day 1 for all subsequent cycles). Each treatment cycle was of 28 days.	

Primary: Percentage of Subjects who Achieved Red Blood Cell (RBC) Transfusion Independence (TI) Lasting at least 8 weeks

End point title	Percentage of Subjects who Achieved Red Blood Cell (RBC) Transfusion Independence (TI) Lasting at least 8 weeks ^{[1][2]}
End point description: Percentage of subjects who achieved RBC TI lasting at least 8 weeks were reported. The 8-week RBC TI rate is defined as the percentage of subjects without any RBC transfusion during any consecutive 8 weeks (56 days) post randomization. Intent-to-treat (ITT) population included all subjects who received at least 1 dose of daratumumab.	
End point type	Primary
End point timeframe: Up to 2 years	
Notes:	

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No inferential statistics was planned for this primary endpoint.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was analysed for the specified arm only as no primary assessments were conducted for other arm.

End point values	Daratumumab			
Subject group type	Reporting group			
Number of subjects analysed	33			
Units: percentage of subjects				
number (confidence interval 95%)	6.1 (0.7 to 20.2)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Subjects who Achieved Red Blood Cell (RBC) Transfusion Independence (TI) Lasting at Least 24 Weeks

End point title	Percentage of Subjects who Achieved Red Blood Cell (RBC) Transfusion Independence (TI) Lasting at Least 24 Weeks ^[3]
-----------------	---

End point description:

Percentage of subjects who achieved RBC TI lasting at least 24 weeks were reported. 24-week RBC TI rate is defined as the percentage of subjects without any RBC transfusion during any consecutive 24 weeks (168 days) post randomisation. ITT population included all subjects who received at least 1 dose of daratumumab.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to 2 years

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: This endpoint was analysed for the specified arm only as no primary assessments were conducted for other arm.

End point values	Daratumumab

Secondary: Percentage of Subjects with Hematologic Improvement (HI) per IWG 2006 by Investigator Assessment

End point title	Percentage of Subjects with Hematologic Improvement (HI) per IWG 2006 by Investigator Assessment ^[8]
-----------------	---

End point description:

Percentage of subjects with HI per IWG 2006 by investigator assessment were reported. Response criteria per IWG 2006 for HI: erythroid response (pretreatment, less than [$<$] 11 gram per deciliter [g/dL]) - hemoglobin (Hb) increase by greater than or equal to (\geq) 1.5 g/dL, relevant reduction of units of RBC transfusions by an absolute number of at least 4 RBC transfusions/8 weeks compared with the pretreatment transfusion number in the previous 8 weeks. Only RBC transfusions given for a Hb of less than or equal to (\leq) 9 g/dL pretreatment counted in the RBC transfusion response evaluation; platelet response (pretreatment, $<100 \times 10^9/L$) - absolute increase of $\geq 30 \times 10^9/L$ for subjects starting with $>20 \times 10^9/L$ platelets. Increase from $<20 \times 10^9/L$ to $>20 \times 10^9/L$ and by at least 100 percent (%); neutrophil response (pretreatment, $<1 \times 10^9/L$) - at least 100% increase and an absolute increase $>0.5 \times 10^9/L$. ITT population included all subjects who received at least 1 dose of

daratumumab.

End point type	Secondary
End point timeframe:	
Up to 2 years	

Notes:

[8] - The end point is not reporting statistics for all the arms in the baseline period. No statistical analyses for this end point

Secondary: Time to Progression to Acute Myeloid Leukemia (AML)

End point title	Time to Progression to Acute Myeloid Leukemia (AML) ^[14]
-----------------	---

End point description:

Time to progression to AML was reported. Time to progression to AML is defined as the interval from study Day 1 to the date of AML progression (bone marrow or peripheral blood blasts $\geq 20\%$). Disease progression as per IWG response criteria: for subjects with: <5% blasts: $\geq 50\%$ increase in blasts to >5% blasts; 5%–10% blasts: $\geq 50\%$ increase to >10% blasts; 10%–20% blasts: $\geq 50\%$ increase to >20% blasts; 20%–30% blasts: $\geq 50\%$ increase to >30% blasts. Any of the following: $\geq 50\%$

decrement from maximum remission/response in granulocytes or platelets; reduction in hemoglobin by ≥ 2 g/dL; transfusion dependence. ITT population included all subjects who received at least 1 dose of daratumumab. Here, "99999" signifies that the median, lower and upper limit of Confidence Interval (CI) were not estimable due to lesser number of events.

End point type	Secondary
End point timeframe:	
Up to 2 years	

Notes:

[14] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was analysed for the specified arm only as no primary assessments were conducted for other arm.

End point values	Daratumumab			
Subject group type	Reporting group			
Number of subjects analysed	33

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 March 2017	The purpose of this amendment was: clarification was provided for subject monitoring and availability of resuscitation equipment in the event of a fatal infusion related reaction (IRR) event during talacotuzumab infusion in study 56022473AML2002. Infusion-rate guidance was changed, and duration of monitoring was increased from 30 minutes to 1-hour post-infusion. Dosing schedules were clarified for talacotuzumab and daratumumab, pre-infusion medications were added for talacotuzumab, pre- and post-infusion medications were added/or clarified for daratumumab. Requirement for blood type assessment and indirect antiglobulin results on Cycle 1 Day 1 for daratumumab and recommendation for herpes zoster (HZ) reactivation prophylaxis were added. Storage and central laboratory information were also included.
25 April 2017	The purpose of this amendment was: closed the enrollment to the talacotuzumab arm as a precautionary measure due to the benefit/risk considerations in subjects with low-risk myelodysplastic syndromes (MDS) and based on the occurrence of a serious Grade 4 IRR in the first subject who received the first and only dose of talacotuzumab in this study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Analyses in this study are limited to data from daratumumab arm only. Objectives initially designed to explore efficacy, PK and safety in talacotuzumab arm were not pursued as enrollment was stopped due to occurrence of serious Grade 4 IRR.

Notes:
