## General information about the trial

Main objective of the trial:

The primary objective of the study was Phase 1: To determine the maximum tolerated dose (MTD) and Recommended Phase 2 Dose (RP2D) of eribulin mesilate in combination with weekly and daily irinotecan hydrochloride in pediatric subjects with relapsed/refractory solid tumors, excluding central nervous system (CNS); Phase 2: To assess the objective response rate (ORR) and duration of response (DOR) of eribulin mesilate in combination with irinotecan hydrochloride in pediatric subjects with rhabdomyosarcoma (RMS), non-rhabdomyosarcoma soft tissue sarcoma (NRSTS), and Ewing sarcoma (EWS).

Protection of trial subjects:

This study was conducted in accordance with standard operating procedures of the sponsor (or designee), which are designed to ensure adherence to GCP guidelines as required by the following:- Principles of the World Medical Association Declaration of Helsinki 2013; - International Council on Harmonisation (ICH) E6 Guideline for GCP (CPMP/ICH/135/95) of the European Agency for the Evaluation of Medicinal Products, Committee for Proprietary Medicinal Products, International Council on Harmonisation of Technical Requirements for Pharmaceuticals for Human Use; - Title 21 of the United States Code of Federal Regulations (US 21 CFR) regarding clinical studies, including Part 50 and Part 56 concerning informed subject consent and IRB regulations and applicable sections of US 21 CFR Part 312;- European Good Clinical Practice Directive 2005/28/EC and Clinical Trial Directive 2001/20/EC for studies conducted within any European Union (EU) country. All SUSARs will be reported, as required, to the Competent Authorities of all involved EU member states.

## Subject disposition

### Recruitment

Recruitment details:

Subjects took part in the study at 22 investigative sites in France, Germany, Greece, Italy, Poland, Spain and United Kingdom.

### Pre-assignment

Screening details:

A total of 46 subjects were screened and signed informed consent form, of which 13 subjects were treated in the Phase 1 and 27 subjects were treated in Phase 2.

### Period 1

Period 1 title	Overall (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Phase 1: Schedule A, Eribulin Mesylate + Irinotecan 20 mg/m <sup>2</sup>

Arm description:

Subjects received eribulin mesylate 1.4 milligram per square meter (mg/m<sup>2</sup>) intravenous infusion on Days 1 and 8 and irinotecan hydrochloride 20 mg/m<sup>2</sup>, intravenous infusion on Days 1 to 5 in a 21 day treatment cycle until MTD was reached. The MTD was determined based on the incidence of dose limiting toxicities (DLTs) in cycle 1.

Arm type	Experimental
Investigational medicinal product name	Irinotecan 20 mg/m <sup>2</sup>
Investigational medicinal product code	
Other name	Irinotecan
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received irinotecan hydrochloride 20 mg/m<sup>2</sup>, intravenous infusion on Days 1 to 5 in a 21 day treatment cycle.

Investigational medicinal product name	Eribulin Mesilate 1.4 mg/m <sup>2</sup>
Investigational medicinal product code	
Other name	E7389, HALAVEN
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received eribulin mesylate 1.4 mg/m<sup>2</sup>, intravenous infusion on Days 1 and 8 in a 21 day treatment cycle.

Subject analysis set title	Phase 1: All Subjects (Dose Evaluable Set)
Subject analysis set type	Sub-group analysis
Subject analysis set description: All subjects received eribulin mesylate 1.4 mg/m <sup>2</sup> intravenous infusion on Days 1 and 8 (schedule A and B) and irinotecan hydrochloride 20 mg/m <sup>2</sup> or 40 mg/m <sup>2</sup> intravenous infusion on Days 1 to 5 (schedule A) and irinotecan hydrochloride 100 mg/m <sup>2</sup> or 125 mg/m <sup>2</sup> intravenous infusion on Days 1 and 8 (schedule B) in a 21 day treatment cycle until MTD was reached. The MTD was determined based on the incidence of dose limiting toxicities (DLTs) in cycle 1. Dose Evaluable Set (DES) was used for evaluation of each dose level for dose escalation and for determination of MTD.	

**Primary: Phase 1: Maximum Tolerated Dose (MTD) of Eribulin Mesylate in Combination with Irinotecan Hydrochloride**

End point title	Phase 1: Maximum Tolerated Dose (MTD) of Eribulin Mesylate in Combination with Irinotecan Hydrochloride <sup>[1]</sup>
-----------------	--

End point description:

The MTD was defined as the highest dose level at which less than 1/3 of subjects experience a DLT during Cycle 1 of therapy. DES for Phase 1 included all subjects who completed Cycle 1 treatment and were evaluated for DLT, and those who discontinued during Cycle 1 due to DLT. DES was used for evaluation of each dose level for dose escalation and for determination of MTD.

ORR was defined as the percentage of subjects with a best overall response (BOR) of confirmed partial response (PR) or complete response (CR) determined by investigator assessment per Response Evaluation Criteria In Solid Tumors (RECIST) version 1.1. CR was disappearance of all target and non-target lesions. All pathological (whether target or non-target) must have a reduction in their short axis less than (<) 10 millimeter (mm). PR was at least a 30 percent (%) decrease in the sum of diameter (SOD) of target lesions, taking as reference the baseline sum diameters. Full analysis set included subjects who received at least 1 dose of either study drug.

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 May 2018	Amendment 01: Up to approximately 50 study sites was added. Ewing sarcoma (EWS) as a treatment group was added. Included duration of response (DOR) as part of the primary objective for Phase 2. Expanded maximum number of subjects for Phase 2 of study from 50 to 75, consistent with addition of an EWS treatment group. Subjects <12 months are included for descriptive purposes only and will not contribute to the determination of the MTD/RP2D for this study, or to the sample size. Eligibility criteria was amended. PK sampling schedule for subjects <12 months was included. Updated Principles of the World Medical Association Declaration of Helsinki from 2008 to 2013. Included storage and labeling information for irinotecan hydrochloride as an Investigational Product. schedule of assessments was amended.
02 August 2018	Amendment 02: Added restriction to concomitant use with St. John's Wort in exclusion criterion #2. Added criteria for study drug discontinuation. Added new Tables (Tables 3 and 8) which list the criteria for study drug discontinuation. Amended PK sampling schedule to reduce the frequency of PK blood draws in relation to the subjects weight/blood volume. Subjects under 6 kg will not have samples for PK analysis taken.
12 October 2018	Amendment 03: Updated the exploratory objective 'To explore the relationship between model-derived exposure to eribulin and the active metabolite for irinotecan (SN 38) in terms of area under the curve and AEs and efficacy endpoints using a model-based approach'. Clarification that the duration of treatment up to 1 year is from the 'start of study treatment'. ECG and electrolyte monitoring will occur 'more frequently in consultation with cardiologist advice and in line with local practice'. For neuroblastoma subjects (Phase 1 only), included MIBG assessments and when to perform them. Updated interim analyses to include an assessment of tolerability. Removed 'safety summaries may be provided periodically' due to this update. Included monthly pregnancy tests are required for all sexually active subjects. Removed assessment for globulin. Updated sponsor's grading for CTCAE laboratory values.
10 July 2019	Amendment 04: Updated description of sample size for Phase 2 to 'approximately 75' or 'approximately 25 per histology' and updated trial schema. Updated inclusion criterion #8 to remove the use of radioisotope for the measurement of the glomerular filtration rate (GFR). Amended exclusion criterion #3 to allow subjects who received prior therapy with irinotecan hydrochloride in Phase 2 if there was no tumor progression during prior irinotecan therapy. Updated exclusion criterion #9. Added FDG-PET scans. Updated details of MIBG scans for neuroblastoma patients. Updated the description of safety data analysis in statistical methods section. Updated estimated study LSLV date (to Mar 2021). Updated description of laboratory analysis values, ECG and other safety analyses. Minor administrative changes.

14 July 2020	Amendment 05: Extended study duration from 36 to 42 months. As per protocol amendment #5, the recommended Phase 2 dose (RP2D) was selected to be Schedule A Dose Level 1 – eribulin (1.4 mg/m <sup>2</sup> ) Day 1 and Day 8 and irinotecan (40 mg/m <sup>2</sup> ) Days 1-5. Updated Inclusion Criterion 1a. Updated Exclusion Criterion 10. Criteria for administration of study drug; Day 8 Bowel function deteriorated since pretreatment/ baseline and requires antidiarrheal medications for within 24 hours before the next administration of irinotecan hydrochloride. Included dose levels specifically for the Phase 2 portion of the study. For bone scans, added: approximately every 24 weeks (in conjunction with a scheduled tumor assessment visit), and as clinically indicated. Bone lesions must be followed with anatomic imaging. Included 'irrespective of dose delays' In instances where a subject becomes pregnant, the following language has been included "The Investigator should confirm whether they agree to follow-up assessments (including survival follow-up) or whether the subject wishes to withdraw consent. If a subject withdraws consent, the date should be documented in the source documents".
29 March 2021	Amendment 06: To clarify subjects aged >6 months and <12 months will be enrolled to Schedule A with a modified dose of eribulin Dose Level -2 (0.8 mg/m <sup>2</sup> Day 1 and Day 8) with the irinotecan dose maintained Dose Level 1 (40 mg/m <sup>2</sup> Day 1 – Day 5) of a 21-day cycle. Amended Inclusion Criterion 1b to include subjects >6 months and <12 months of age in Phase 2. For subjects >6 months and <12 months of age in Phase 2, further dose reductions have been included for this age group for eribulin in case of toxicities requiring a dose reduction. Specified if toxicities do not recover after 2 dose reductions, treatment with that agent must be discontinued. Pharmacokinetic (PK): Specified that subjects who weigh under 6 kg will not have samples for PK analysis taken. Vital signs, physical examination, and chemistry assessments during Phase 2 for the >6 months and <12 months age group will be weekly. Subjects in the age groups > 6 months to < 12 months and ≥18 to ≤25 years old are included for descriptive purposes only and will not contribute to the full sample size analyses. Subjects in the age group > 6 months to <12 months will receive approximately 75% of the RP2D of eribulin (rationale for lower dose is provided in Section 9.4.4) and therefore should not been included in the full sample size analyses. The EMA PDCO requested that subjects in the age group ≥18 to ≤25 years old should not be included in the full sample size analyses.

## Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
01 April 2020	New screening or enrollment was temporarily halted on all sites on study for the period of 01 Apr 2020 to 30 Apr 2020 to reduce the risk of potential COVID-19 exposure.	-
