Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 November 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	13 November 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study is to evaluate the safety, including tolerability, of ISIS 681257 and to assess the efficacy of different doses and dosing regimens of ISIS 681257 for reduction of plasma Lipoprotein(a) [Lp(a)] levels in participants with hyperlipoproteinemia(a) and established CVD.

Protection of trial subjects:

This study was conducted in compliance with International Council for Harmonisation (ICH) Good Clinical Practice (GCP) guidelines to ensure the safety of participants. Before commencement of the trial, the Investigator was responsible for obtaining written informed consent from the participant or legally acceptable representative after adequate explanation of the aims, methods, anticipated benefits, and potential hazards of the study and before any protocol-specific screening procedures or any study drug (ISIS 681257 or placebo) were administered. The protocol provided prespecified safety monitoring rules. An independent Data and Safety Monitoring (DSMB) was also assembled to review safety, tolerability and efficacy (as needed) data collected during the study and provided recommendations to the sponsor for modifying, stopping or continuing the study as planned.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 March 2017
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	4 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 16
Country: Number of subjects enrolled	Denmark: 25
Country: Number of subjects enrolled	Germany: 48
Country: Number of subjects enrolled	Canada: 57
Country: Number of subjects enrolled	United States: 140
Worldwide total number of subjects	286
EEA total number of subjects	89

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	178
From 65 to 84 years	108
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants with a clinical diagnosis of hyperlipoproteinemia(a) and established CVD were enrolled in 31 study centers in United States, Canada, Denmark, Germany and Netherlands between 7th March 2017 to 13th November 2018.

Pre-assignment

Screening details:

286 participants were randomized in a 1:1:1:1:1 ratio to Cohorts A, B, C, D or E. In each cohort, participants were randomized in a 5:1 ratio to receive ISIS 681257 or placebo. 250 participants completed the treatment period. 263 of 286 participants completed the follow-up period. Here, Completed refers to participants who completed study treatment

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort A: ISIS 681257: 20 mg Q4W

Arm description:

Cohort A participants received 20 milligrams (mg) ISIS 681257, subcutaneous (SC) injection, once every 4 weeks (Q4W), for up to 49 weeks and a maximum of 13 doses.

Arm type	Experimental
Investigational medicinal product name	ISIS 681257
Investigational medicinal product code	ISIS 681257
Other name	AKCEA-APO(a)-LRx, IONIS-APO(a)-LRx, TQJ230 and Pelacarsen
Pharmaceutical forms	Injection, Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

ISIS 681257 at dose 20 milligrams (mg), administered via subcutaneous (SC) injection, once every 4 weeks (Q4W).

Arm title	Cohort B: ISIS 681257: 40 mg Q4W
------------------	----------------------------------

Arm description:

Cohort B participants received 40 mg of ISIS 681257, SC injection, once Q4W, for up to 49 weeks and a maximum of 13 doses.

Arm type	Experimental
Investigational medicinal product name	ISIS 681257
Investigational medicinal product code	ISIS 681257
Other name	AKCEA-APO(a)-LRx, IONIS-APO(a)-LRx, TQJ230 and Pelacarsen
Pharmaceutical forms	Solution for injection, Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

ISIS 681257 at dose 20 milligrams (mg), administered via subcutaneous (SC) injection, once every 4 weeks (Q4W).

Arm title	Cohort C: ISIS 681257: 60 mg Q4W
------------------	----------------------------------

Arm description:

Cohort C participants received 60 mg of ISIS 681257, SC injection, once Q4W, for up to 49 weeks and a

maximum of 13 doses.

Arm type	Experimental
Investigational medicinal product name	ISIS 681257
Investigational medicinal product code	ISIS 681257
Other name	AKCEA-APO(a)-LRx, IONIS-APO(a)-LRx, TQJ230 and Pelacarsen
Pharmaceutical forms	Solution for injection, Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

ISIS 681257 at dose 20 milligrams (mg), administered via subcutaneous (SC) injection, once every 4 weeks (Q4W).

Arm title	Cohort D: ISIS 681257: 20 mg Q2W
------------------	----------------------------------

Arm description:

Cohort D participants received 20 mg of ISIS 681257, SC injection, once every 2 weeks (Q2W), for up to 51 weeks and a maximum of 26 doses.

Arm type	Experimental
Investigational medicinal product name	ISIS 681257
Investigational medicinal product code	ISIS 681257
Other name	AKCEA-APO(a)-LRx, IONIS-APO(a)-LRx, TQJ230 and Pelacarsen
Pharmaceutical forms	Injection, Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

ISIS 681257 at dose 20 milligrams (mg), administered via subcutaneous (SC) injection, once every 4 weeks (Q4W).

Arm title	Cohort E: ISIS 681257: 20 mg QW
------------------	---------------------------------

Arm description:

Cohort E participants received 20 mg of ISIS 681257, SC injection, once weekly (QW), for up to 52 weeks and a maximum of 52 doses.

Arm type	Experimental
Investigational medicinal product name	ISIS 681257
Investigational medicinal product code	ISIS 681257
Other name	AKCEA-APO(a)-LRx, IONIS-APO(a)-LRx, TQJ230 and Pelacarsen
Pharmaceutical forms	Injection, Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

ISIS 681257 at dose 20 milligrams (mg), administered via subcutaneous (SC) injection, once every 4 weeks (Q4W).

Arm title	Placebo
------------------	---------

Arm description:

Participants in each cohort were randomized to receive placebo at a dose-matched volume of study drug (ISIS 681257).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Sterile normal saline (0.9% NaCl)

Primary: Percent Change From Baseline in Fasting Lipoprotein A [Lp(a)] at the Primary Analysis Time Point

End point title	Percent Change From Baseline in Fasting Lipoprotein A [Lp(a)] at the Primary Analysis Time Point
End point description: An ANCOVA model was performed on the log ratio of Lp(a) value at the Primary Analysis Time Point to Lp(a) value at Baseline. The estimate of the log ratio was converted back to the original scale and percent change was calculated using formula: $= (\text{ratio of Lp(a) value at the Primary Analysis Time Point to Lp(a) value at Baseline} - 1) \times 100$. Full Analysis Set (FAS) included all participants who were randomized and received at least 1 dose of study drug (ISIS 681257 or placebo). FAS represented the practically feasible intent-to-treat (ITT) population as delineated in ICH Guideline E9.

Statistical analyses

No statistical analyses for this end point

Secondary: Percent Change From Baseline in Fasting Low-Density Lipoprotein Cholesterol (LDL-C)

End point title	Percent Change From Baseline in Fasting Low-Density Lipoprotein Cholesterol (LDL-C)
-----------------	---

End point description:

An ANCOVA model was performed on the log ratio of LDL-C value at the Primary Analysis Time Point to LDL-C value at Baseline. The estimate of the log ratio was converted back to the original scale and percent change was calculated using formula: $\text{Percent Change} = (\text{ratio of LDL-C value at the Primary Analysis Time Point to LDL-C value at Baseline} - 1) \times 100$. FAS included all participants who were randomized and received at least 1 dose of study drug (ISIS 681257 or placebo). FAS represented the practically feasible ITT population as delineated in ICH Guideline E9.

End point type	Secondary

Notes:

[30] - Mean difference in percent (%) change from baseline (CFB) based on difference in LSM of log (Primary Analysis Time Point/Baseline) was estimated.

Statistical analysis title	Cohort B: ISIS 681257: 40 mg Q4W versus Placebo
Comparison groups	Cohort B: ISIS 681257: 40 mg Q4W v Placebo
Number of subjects included in analysis	95
Analysis specification	Pre-specified
Analysis type	superiority ^[31]
P-value	< 0.0001
Method	ANCOVA
Parameter estimate	Mean Difference in % CFB
Point estimate	-63

Confidence interval	
level	95 %
sides	2-sided
lower limit	-74
upper limit	-46

Notes:

[31] - Mean difference in percent (%) change from baseline (CFB) based on difference in LSM of log (Primary Analysis Time Point/Baseline) was estimated.

Statistical analysis title	Cohort C: ISIS 681257: 60 mg Q4W versus Placebo
Comparison groups	Cohort C: ISIS 681257: 60 mg Q4W v Placebo
Number of subjects included in analysis	94
Analysis specification	Pre-specified
Analysis type	superiority ^[32]
P-value	< 0.0001
Method	ANCOVA
Parameter estimate	Mean Difference in % CFB
Point estimate	-82
Confidence interval	
level	95 %
sides	2-sided
lower limit	-87
upper limit	-73

Notes:

[32] - Mean difference in percent (%) change from baseline (CFB) based on difference in LSM of log (Primary Analysis Time Point/Baseline) was estimated.

Statistical analysis title	Cohort D: ISIS 681257: 20 mg Q2W versus Placebo
Comparison groups	Cohort D: ISIS 681257: 20 mg Q2W v Placebo
Number of subjects included in analysis	95
Analysis specification	Pre-specified
Analysis type	superiority ^[33]
P-value	< 0.0001
Method	ANCOVA
Parameter estimate	Mean Difference in % CFB
Point estimate	-68
Confidence interval	
level	95 %
sides	2-sided
lower limit	-78
upper limit	-54

Notes:

[33] - Mean difference in percent (%) change from baseline (CFB) based on difference in LSM of log (Primary Analysis Time Point/Baseline) was estimated.

Statistical analysis title	Cohort E: ISIS 681257: 20 mg QW versus Placebo
Comparison groups	Cohort E: ISIS 681257: 20 mg QW v Placebo

Number of subjects included in analysis	95
Analysis specification	Pre-specified
Analysis type	superiority ^[34]
P-value	< 0.0001
Method	ANCOVA
Parameter estimate	Mean Difference in % CFB
Point estimate	-89
Confidence interval	
level	95 %
sides	2-sided
lower limit	-93
upper limit	-84

Notes:

[34] - Mean difference in percent (%) change from baseline (CFB) based on difference in LSM of log (Primary Analysis Time Point/Baseline) was estimated.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to 16 weeks post-treatment period (up to approximately 1.3 years)

Adverse event reporting additional description:

Safety Set included all participants who were randomized and received at least 1 dose of study drug (ISIS 681257 or placebo).

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA

Reporting groups

Reporting group title	Cohort A: ISIS 681257: 20mg Q4W
-----------------------	---------------------------------

Reporting group description:

Cohort A participants received 20 milligrams (mg) ISIS 681257, subcutaneous (SC) injection, once every 4 weeks (Q4W), for up to 49 weeks and a maximum of 13 doses.

Reporting group title	Cohort B: ISIS 681257: 40mg Q4W
-----------------------	---------------------------------

Reporting group description:

Cohort B participants received 40 mg of ISIS 681257, SC injection, once Q4W, for up to 49 weeks and a maximum of 13 doses.

Reporting group title	Cohort C: ISIS 681257: 60mg Q4W
-----------------------	---------------------------------

Reporting group description:

Cohort C participants received 60 mg of ISIS 681257, SC injection, once Q4W, for up to 49 weeks and a maximum of 13 doses.

Reporting group title	Cohort D: ISIS 681257: 20mg Q2W
-----------------------	---------------------------------

Reporting group description:

Cohort D participants received 20 mg of ISIS 681257, SC injection, once every 2 weeks (Q2W), for up to 51 weeks and a maximum of 26 doses.

Reporting group title	Cohort E: ISIS 681257: 20mg QW
-----------------------	--------------------------------

Reporting group description:

Cohort E participants received 20 mg of ISIS 681257, SC injection, once weekly (QW), for up to 52 weeks and a maximum of 52 doses.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Participants in each cohort were randomized to receive placebo at a dose-matched volume of study drug (ISIS 681257).

Serious adverse events	Cohort A: ISIS 681257: 20mg Q4W	Cohort B: ISIS 681257: 40mg Q4W	Cohort C: ISIS 681257: 60mg Q4W

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 October 2016	Regulatory advice on inclusion of more detailed description of processes for platelet monitoring, and more frequent monitoring of liver function.
29 November 2016	Regulatory advice on inclusion of biomarkers of renal damage and increased frequency of renal monitoring. Addition of a Data Safety Monitoring Board.
30 December 2016	Adjustment of the frequency, and alert and intervention limits, for renal safety and adjustment of the frequency of liver safety testing.
05 January 2017	The study population was increased to 270 participants (54 per cohort) to support a statistical assessment of risk of platelet reduction in this population. In addition, the 10 mg weekly treatment cohort was modified to 20 mg every 2 weeks (biweekly).
30 May 2017	Regulatory advice on addition of exclusion criteria, reduced permitted timeframe for identifying critical laboratory results by the investigator and replacement of the Adverse Event (AE) definition.
25 January 2018	Updated platelet monitoring to allow for potential to return to every 2-week monitoring, clarified definition and scheduling of the follow-up period and End of Treatment visit for last participant to complete primary endpoint visit.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
