

Clinical trial results:

A Phase 3, Multicenter, Randomized, Double-Blind Study With an Active-Controlled Initial Treatment Period Followed by a Dose-Blind Maintenance Treatment Period to Evaluate the Efficacy and Safety of Bimekizumab in Adult Subjects With Moderate to Severe Chronic Plaque Psoriasis

Summary

Paediatric regulatory details	
Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No
•• .	•

Notes:

Results analysis stage	
Analysis stage	Final
Date of interim/final analysis	09 April 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	26 February 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Compare the efficacy of bimekizumab administered subcutaneously (sc) for 16 weeks versus adalimumab in the treatment of subjects with moderate to severe plaque psoriasis (PSO)

Protection of trial subjects:

During the conduct of the study all participants were closely monitored.

Background therapy:

Background therapy as permitted in the protocol

Evidence for comparator:

Adalimumab is a widely used treatment option for patients with moderate to severe plaque PSO who are candidates for systemic therapy or phototherapy. Adalimumab is a human immunoglobulin (Ig) G1 monoclonal antibody that binds specifically to tumor-necrosis factor (TNF). The efficacy of TNFa inhibitors in treating psoriasis is attributed to their inhibition of Th17-Tcells.

Actual start date of recruitment	26 January 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	3 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Subject disposition

Recruitment

Recruitment details:

The study started to enroll patients in January 2018 and concluded in February 2020.

Pre-assignment

Screening details:

This study included 4 periods: a Screening Period (2 to 5 weeks), an Initial Treatment Period (16 weeks), a Maintenance Treatment Period (40 weeks), and a Safety Follow-Up (SFU) Visit (20 weeks after the final dose of study drug). Participant Flow refers to the Randomized Set.

Period 1	
Period 1 title	Initial Treatment Period: Wk0-Wk16
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Carer, Investigator, Subject, Assessor
Arms	
Are arms mutually exclusive?	Yes
Arm title	Bimekizumab Arm 2

Arm description:

Study participants received bimekizumab dose regimen 1 for 16 weeks and proceeded with bimekizumab dose regimen 2 until Week 56. Study participants received placebo at pre-specified time-points to maintain the blinding.

Arm type	Experimental
Investigational medicinal product name	Bimekizumab
Investigational medicinal product code	UCB4940
Other name	BKZ
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Study participants received bimekizumab at pre-defined timepoints in dose regimen 1 and/or dose regimen 2.

Arm title	Bimekizumab Arm 1

Arm description:

Study participants received bimekizumab dose regimen 1 for 56 weeks. Study participants received placebo at pre-specified time-points to maintain the blinding.

Arm type	Experimental
Investigational medicinal product name	Bimekizumab
Investigational medicinal product code	UCB4940
Other name	BKZ
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Study participants received bimekizumab at pre-defined timepoints in dose regimen 1 and/or dose regimen 2.

Arm title	Adalimumab Arm
-----------	----------------

Arm description:

Study participants received adalimumab for 24 weeks and then received bimekizumab dose regimen 1 until Week 56. Study participants received placebo at pre-specified time-points to maintain the blinding.

Arm type Ac	ctive comparator
-------------	------------------

Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Adalimumab (ADA) was administered according to the labeling recommendations.

End point title	Percentage of Participants with a Psoriasis Area and Severity
	Index 90 (PASI90) response at Week 16

End point description:

The PASI90 response assessments are based on at least 90% improvement in the PASI score from Baseline. Body divided into 4 areas: head, arms, trunk to groin, and legs to top of buttocks. Assignment of an average score for the redness, thickness, and scaling for each of the 4 body areas with a score of 0 (clear) to 4 (very marked). Determining the percentage of skin covered with PSO for each of the body areas and converting to a 0 to 6 scale. Final PASI= average redness, thickness, and scaliness of the psoriatic skin lesions, multiplied by the involved psoriasis area score of the respective section, and weighted by the percentage of the person's affected skin for the respective section. The minimum possible PASI score is 0= no disease, the maximum score is 72= maximal disease.

The Randomized Set (RS) consisted of all randomized study participants. Both BKZ Arm 1 and BKZ Arm 2 are identical in terms of treatment received until Week 16 and therefore they are combined for analyses.

[8] - P-values for the comparison of treatment groups were based on the CMH test from the general association.

Secondary: Percentage of Participants With a PASI75 Response at Week 4 End point title Percentage of Participants With a PASI75 Response at Week 4

End point description:

The PASI75 response assessments are based on at least 75% improvement in the PASI score from Baseline. Body divided into 4 areas: head, arms, trunk to groin, and legs to top of buttocks. Assignment of an average score for the redness, thickness, and scaling for each of the 4 body areas with a score of 0 (clear) to 4 (very marked). Determining the percentage of skin covered with PSO for each of the body areas and converting to a 0 to 6 scale. Final PASI= average redness, thickness, and scaliness of the psoriatic skin lesions, multiplied by the involved psoriasis area score of the respective section, and weighted by the percentage of the person's affected skin for the respective section. The minimum possible PASI score is 0= no disease, the maximum score is 72= maximal disease.

The Randomized Set (RS) consisted of all randomized study participants. Both BKZ Arm 1 and BKZ Arm 2 are identical in terms of treatment received until Week 16 and therefore they are combined for analyses.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent AEs were collected from Baseline to Safety Follow-Up Visit (up to Week 72)

Adverse event reporting additional description:

Treatment-emergent AEs were defined as those AEs that had a start date on or following the first dose of study treatment through the final dose of study treatment + 140 days (covering up to Safety Follow-Up Visit for study participants not enrolling in Open-label Extension (OLE) study).

Up Visit for study participants not enrolli	ng in Open-label Extension (OLE) study).
Assessment type	Non-systematic

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 April 2018	Protocol Amendment 2 (06 Apr 2018) included the following modifications: • Extended the duration of the Screening Period, and therefore the overall study duration, by 1 week • Updated list of current treatment for Psoriasis (PSO) to reflect changes in labeling and approved countries • Updated list of completed and ongoing bimekizumab studies to reflect completion of study UP0042 • Clarified calculation of PASI response rates • Removed references to pharmacodynamic (PD) assessments as they were not conducted in this study • Updated the schedule of study assessments to include a hematology and biochemistry sample at Week 28, and to modify the visits at which the Tuberculosis (TB) questionnaire, body weight, physical examination, and Electrocardiogram (ECG) were assessed • Clarified that all visits from first dose to Week 24 would have a ±3 day visit window, while all visits from Week 28 to end of study would have a ±7 day window • Clarified the dosing window • Clarified the dosing window • Modified exclusion criterion to clarify exclusion of study participants who participated in other studies of bimekizumab, other medications (systemic or topical), or devices • Modified exclusion criteria to exclude use of prohibited PSO medications • Modified exclusion criteria to exclude use of prohibited PSO medications • Modified exclusion criteria for nonresponders and for study participants with newly diagnosed inflammatory bowel disease (IBD) • Clarified withdrawal criteria for study participants with depression or suicidal ideation or behavior • Corrected information pertaining to how adalimumab was supplied • Updated prohibited concomitant medications to include tildrakizumab and risankizumab • Corrected discrepancies between Study procedures by visit and Schedule of study assessments • Revised Psoriatic Arthritis Screening and Evaluation (PASE) questionnaire scoring • Clarified definition of abortion
06 April 2018	Continuation of Protocol Amendment 2: • Provided additional details for requirements for investigational medicinal product (IMP) rechallenge in the event of potential drug-induced liver injury (PDILI) • Defined a bimekizumab Set as an analysis population • Clarified regions for analyses • Updated the sequence testing and analysis of secondary efficacy variables In addition, minor spelling, editorial, and formatting changes were made, and the List of abbreviations was updated.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
