

## Clinical trial results:

**A PHASE 2, 24-WEEK, RANDOMIZED, DOUBLE-BLIND, PLACEBO-CONTROLLED, MULTICENTER STUDY, WITH AN 80-WEEK ACTIVE TREATMENT EXTENSION, TO EVALUATE THE EFFICACY AND SAFETY OF CC-90001 IN SUBJECTS WITH IDIOPATHIC PULMONARY FIBROSIS**

### Summary

EudraCT number	2016-003473-17
Trial protocol	GB GR
Global end of trial date	24 December 2021

### Results information

Result version number	v1 (current)
This version publication date	07 January 2023
First version publication date	07 January 2023

### Trial information

#### Trial identification

Sponsor protocol code	CC-90001-IPF-001
-----------------------	------------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	Bristol-Myers Squibb
Sponsor organisation address	Chaussee de la Hulpe 185, Brussels, Belgium, 1170
Public contact	EU Study Start-Up Unit, Bristol-Myers Squibb International Corporation, Clinical.Trials@bms.com
Scientific contact	Bristol-Myers Squibb Study Director, Bristol-Myers Squibb, Clinical.Trials@bms.com

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 December 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	24 December 2021
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the effect of CC-90001, 200 mg and 400 mg, when orally administered (PO) once daily (QD), compared with placebo, on percent of predicted forced vital capacity (FVC) after 24 weeks of treatment in subjects with idiopathic pulmonary fibrosis (IPF).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 July 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 15
Country: Number of subjects enrolled	Taiwan: 1
Country: Number of subjects enrolled	Germany: 10
Country: Number of subjects enrolled	United Kingdom: 23
Country: Number of subjects enrolled	Russian Federation: 13
Country: Number of subjects enrolled	Turkey: 5
Country: Number of subjects enrolled	Ukraine: 23
Country: Number of subjects enrolled	Canada: 15
Country: Number of subjects enrolled	United States: 20
Country: Number of subjects enrolled	Brazil: 8
Country: Number of subjects enrolled	Colombia: 2
Worldwide total number of subjects	135
EEA total number of subjects	10

Notes:

### Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	36
From 65 to 84 years	98
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Participants in the placebo arm during treatment period were re-randomized during the active treatment period to receive either CC-90001 200mg or CC-90001 400mg.

1 participant in the active treatment period did not have the end of study form filled out and therefore was listed in the missing row.

### Period 1

Period 1 title	Placebo Controlled Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	CC-90001 200mg (IPF Study)

Arm description:

CC-90001 200mg PO QD

Arm type	Experimental
Investigational medicinal product name	CC-90001
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

200mg PO QD (One 200mg tablet)

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

one placebo tablet PO QD

<b>Arm title</b>	CC-90001 400mg (IPF Study)
------------------	----------------------------

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Re-randomization occurred after placebo treatment phase going into active treatment extension treatment phase

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Re-randomization occurred after placebo treatment phase going into active treatment extension treatment phase

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Re-randomization occurred after placebo treatment phase going into active treatment extension treatment phase

[4] - The number of subjects at this milestone seems inconsistent with the number of subjects in the

arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Re-randomization occurred after placebo treatment phase going into active treatment extension treatment phase

[5] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Re-randomization occurred after placebo treatment phase going into active treatment extension treatment phase

[6] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Re-randomization occurred after placebo treatment phase going into active treatment extension treatment phase

[7] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Re-randomization occurred after placebo treatment phase going into active treatment extension treatment phase

## Statistical analyses

No statistical analyses for this end point

## Secondary: Percentage of participants who had disease progression

End point title	Percentage of participants who had disease progression <sup>[5]</sup>
-----------------	---

End point description:

Disease progression is defined as one or more of the following:

- Death from respiratory failure,
- Absolute decrease of  $\geq 10\%$  from baseline in % predicted FVC at two consecutive evaluations at a minimum of 4 weeks between evaluations
- Decrease from baseline of  $\geq 50$  meters in 6MWT distance (in the absence of a readily explainable cause, such as injury or trauma).
- Unexplained worsening hypoxemia (an absolute decrease from baseline of 4% or more in arterial oxygen saturation by pulse oximetry [SpO<sub>2</sub>]).

FAS population is defined as all randomized participants who received at least one dose of the investigational product.

Baseline is defined as day 1 of treatment.

End point type	Secondary

## Secondary: Mean change from baseline in total score and domains on the Saint George's Respiratory Questionnaire (SGRQ)

End point title	Mean change from baseline in total score and domains on the Saint George's Respiratory Questionnaire (SGRQ) <sup>[6]</sup>
-----------------	--

End point description:

The SGRQ is a quality of life health questionnaire that has been validated in IPF. It consists of 76 items in three domains:

- Symptoms
- Activity
- Impact of disease on daily life

A total score is calculated from 0 (no health impairment) to 100 (maximum health impairment). In addition to the total score, there is also a score for each domain: symptoms, activity, and impact which are scored 0-100. Each component score is derived by dividing the summed weights, unique for all questions, by the maximum possible weight.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline up to week 24

Notes:

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Different reporting arms for different periods.

## Secondary: Mean change from baseline in The University of California San Diego Shortness of Breath Questionnaire (UCSD-SOBQ)

End point title	Mean change from baseline in The University of California San Diego Shortness of Breath Questionnaire (UCSD-SOBQ) <sup>[7]</sup>
-----------------	--

End point description:

The UCSD-SOBQ is a 24-item dyspnea questionnaire that asks participants to rate themselves from 0 ("Not at all") to 5 ("Maximally or unable to do because of breathlessness") in two areas: 1) how short of breath they are while performing various activities (21 items); and 2) how much shortness of breath, fear of hurting themselves by overexerting, and fear of shortness of breath limit them in their daily lives (3 items). If the subject does not routinely perform the activity, they are asked to estimate the degree of shortness of breath anticipated. The UCSD-SOBQ is scored by summing responses across all 24 items to form a total score. Scores range from 0 to 120. The lower the score the better.

End point type	Secondary

## Secondary: Mean change in distance walked in the 6-minute Walk Test (6MWT)

End point title	Mean change in distance walked in the 6-minute Walk Test (6MWT) <sup>[8]</sup>
-----------------	--

End point description:

Mean change in distance walked in the 6-minute Walk Test (6MWT)

The 6MWT measures the distance a participant is able to walk on a hard, flat surface, over a total of six minutes.

The time points which will be measured are from baseline to Week 24, Extension Week 52, Extension

FAS population is defined as all randomized participants who received at least one dose of the investigational product.

Baseline is defined as day 1 of treatment. Week 24 is the start of baseline of the active treatment extension period.

Here "9999" signifies NA

End point type	Secondary

## Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse Events, Serious Adverse events and all cause mortality: approximately 108 weeks.

Adverse event reporting additional description:

AEs, SAEs and All cause mortality are calculated from first dose, to 4 weeks after last treatment.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 August 2017	<p>Added new inclusion criterion #4 regarding consideration of treatment options for idiopathic pulmonary fibrosis (IPF)</p> <p>Revised inclusion criterion #6 regarding the diagnosis of IPF via high resolution computerized tomography (HRCT)</p> <p>Increased the time prior to randomization for acceptance of historical HRCT from</p> <p>Revised inclusion criterion #11 and Protocol Summary regarding the lower limit for diffusion capacity of the lung for carbon monoxide (DLCO)</p> <p>In response to recommendations of investigators, the lower limit for hemoglobin corrected percent predicted DLCO was changed from <math>\geq 30\%</math> to <math>\geq 25\%</math>.</p> <p>Revised exclusion criterion #9 regarding respiratory disorder</p> <p>Added to the term pulmonary arterial hypertension, requiring treatment to exclude those patients with more advanced disease.</p> <p>Revised exclusion criterion #12 regarding IPF targeted therapies</p> <p>Mycophenolate mofetil was added to the list of excluded medications as it may be used off-label to treat IPF.</p> <p>Included External Data Monitoring Committee (DMC) (Section 9.9.3 and Protocol Summary)</p> <p>Revised Acute Exacerbation Criteria</p> <p>Mandatory Discontinuation Due to Unsuccessful Treatment of Acute Exacerbation</p>
18 July 2018	<p>The rationale for the following changes is to allow idiopathic pulmonary fibrosis (IPF) subjects who were randomized to placebo the opportunity to receive CC-90001 (200 mg or 400 mg orally [PO] once a day [QD]) after 24 weeks of treatment. In the current study design, these subjects are not given the opportunity to receive CC-90001. It will also afford all subjects to receive active treatment for an additional 52 weeks (80-week Active Treatment Extension Phase).</p>
28 August 2019	<p>The primary purpose of this amendment is to allow subjects with idiopathic pulmonary fibrosis (IPF) receiving protocol-allowable standard of care (SOC) treatment to be enrolled in the study.</p> <p>Consequently, the number of subjects planned for enrollment was increased from 135 to 165 to obtain an adequate number of subjects receiving SOC.</p> <p>Another significant change incorporated into this amendment is the exclusion of nintedanib as an SOC treatment option, which was initially communicated to all sites as an Administrative Investigator Letter globally on 26 Sep 2018, based on results from a drug-drug interaction (DDI) study.</p> <p>A separate, exploratory substudy in subjects with progressive pulmonary fibrosis (PPF) will be initiated after a decision from an interim analysis allows continuation of the IPF study as planned. Approximately 45 qualifying PPF subjects would be enrolled into the substudy. As a result, the total number of randomized subjects into the entire study would increase from 165 to approximately 210 subjects.</p>
