

Clinical trial results:

A single-arm interventional Phase IV, post-authorisation study evaluating the safety of pediatric patients with transfusional hemosiderosis treated with deferasirox crushed film coated tablets

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 December 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	05 December 2019
Global end of trial reached?	Yes
Global end of trial date	05 December 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to assess the safety of crushed deferasirox FCT with respect to selected gastrointestinal (GI) disorders in pediatric patients aged ≥ 2 to < 6 years with transfusional iron overload up to 24 weeks including 30 days safety follow up.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 January 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Oman: 15
Country: Number of subjects enrolled	Egypt: 12
Country: Number of subjects enrolled	Italy: 5
Country: Number of subjects enrolled	Thailand: 5
Country: Number of subjects enrolled	Lebanon: 3
Country: Number of subjects enrolled	United Arab Emirates: 2
Country: Number of subjects enrolled	United Kingdom: 2
Worldwide total number of subjects	44
EEA total number of subjects	7

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	44
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The study was conducted in 10 sites in 7 countries (one in Egypt, three in Italy, one in Lebanon, one in Oman, two in Thailand, one in the United Arab Emirates, and one in the United Kingdom).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Deferasirox
-----------	-------------

Arm description:

Crushed deferiasirox (ICL670) FCT for oral use daily. Deferiasirox FCT dosing was based on subject's weight.

Arm type	Experimental
Investigational medicinal product name	Deferasirox
Investigational medicinal product code	
Other name	ICL670
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Deferasirox was provided in tablet forms of 90, 180 and 360 mg. Tablets were crushed in the home environment and administered by sprinkling the full dose on to soft food to be consumed immediately.

Number of subjects in period 1	Deferasirox
Started	44
Completed	39
Not completed	5
Physician decision	1
Consent withdrawn by subject	1
Adverse event, non-fatal	3

Baseline characteristics

End points

End points reporting groups

Reporting group title	Deferasirox
Reporting group description: Crushed deferasirox (ICL670) FCT for oral use daily. Deferasirox FCT dosing was based on subject's weight.	

Primary: Number of Participants with selected gastrointestinal disorders up to 24 weeks

End point title	Number of Participants with selected gastrointestinal disorders up to 24 weeks ^[1]
End point description: To assess the safety of crushed deferasirox FCT with respect to selected gastrointestinal (GI) disorders (esophagitis, stomatitis, mouth ulceration, gastric ulcers, haemorrhage, abdominal pain, diarrhea, nausea, and vomiting). Only descriptive analysis performed.	
End point type	Primary
End point timeframe: Baseline (Week 1 Day 1) up to Week 24, plus 30 day safety follow-up.	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Only descriptive analysis performed	

End point values	Deferasirox			
Subject group type	Reporting group			
Number of subjects analysed	44			
Units: Participants				
Oesophagitis	0			
Barrett's esophagitis	0			
Stomatitis	0			
Mouth ulceration	0			
Gastric ulcer	0			
Gastrointestinal haemorrhage	0			
Abdominal pain	2			
Diarrhoea	4			
Nausea	0			
Vomiting	2			

Statistical analyses

No statistical analyses for this end point

Secondary: Adverse Events profile

End point title	Adverse Events profile
End point description: Analysis of frequencies for treatment emergent Adverse Event (TEAEs), Serious Adverse Event TEAEs	

and Deaths due to AEs, through the monitoring of relevant clinical and laboratory safety parameters. Only descriptive analysis performed.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline (Week 1 Day 1) up to Week 24, plus 30 day safety follow-up.

End point values	Deferasirox			
Subject group type	Reporting group			
Number of subjects analysed	44			
Units: Participants				
On treatment-related AE	22			
On treatment related SAE	0			
On treatment Deaths	0			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants with Notable Changes in ECG values from baseline

End point title	Number of Participants with Notable Changes in ECG values from baseline
-----------------	---

End point description:

Safety measured by the notable post-baseline changes in ECG values (PR, QRS, QT, QTcF and HR intervals) compared to baseline. Baseline was defined as the last non-missing value on or prior to the first dose. Only descriptive analysis performed.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline (Week 1 Day 1) up to Week 24, plus 30 day safety follow-up.

End point values	Deferasirox			
Subject group type	Reporting group

Change from BL @ Week 12	-52.8 (± 790.26)			
Change from BL @ Week 16	71.9 (± 988.30)			
Change from BL @ Week 20	-64.3 (± 791.92)			
Change from BL @ EOT (Week 24)	-140.7 (± 824.01)			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants with worst post-baseline values in selected Chemistry parameters

End point title	Number of Participants with worst post-baseline values in selected Chemistry parameters
-----------------	---

End point description:

Safety measured by the worst post-baseline severity grade observed in a patient calculated using the normal/low/high classifications based on local laboratory normal ranges, regardless of the baseline status. Baseline was defined as the last non-missing value on or prior to the first dose. The selected chemistry parameters were: Alanine aminotransferase (ALT), Alkaline phosphatase (ALP), Aspartate aminotransferase (AST), total bilirubin, direct bilirubin, serum creatinine and Urine protein creatinine ratio (UPCR) (Protein/Creatinine represented UPCR). Only descriptive analysis performed.

End point type	Secondary

Secondary: Palatability score in Chelation naive participants

End point title	Palatability score in Chelation naive participants
-----------------	--

End point description:

The palatability (taste and ability to consume medicine) questionnaire consisted of 4 items, three items measuring taste or ability to consume medicine and one item measuring aftertaste. The aftertaste item was treated separately. Among the taste items, first one measured taste on a five point response scale. The last two items measured what happened after taking the medicine, i.e., swallowed or vomited etc. and how the perceived amount of liquid taken with the medicine was, enough, not enough or too much. The palatability summary score was calculated from these three items using a scoring matrix and the score ranges from 0 to 11. A higher score indicates better palatability. Only descriptive analysis was performed.

Secondary: Number of Participants pre-treated with deferasirox with Palatability After taste item scoring

End point title	Number of Participants pre-treated with deferasirox with Palatability After taste item scoring
-----------------	--

End point description:

The palatability (taste and ability to consume medicine) questionnaire consisted of 4 items, three items measuring taste or ability to consume medicine and one item measuring aftertaste. The aftertaste item was treated as a separate item and scored on a 5-point response scale with the response format Very good = 1 (best), Good = 2, Neither good nor bad = 3, Bad = 4, Very bad = 5 (worst). Only descriptive analysis performed using frequency counts.

Secondary: GI Symptom Score in Chelation naive participants

End point title	GI Symptom Score in Chelation naive participants
-----------------	--

End point description:

The GI symptom score was calculated from responses to 5 questions, each with a possible score of 1 to 5, for an overall possible score range of 5 to 25, where a lower score represents a less severe GI symptom and a higher score represents a more severe GI symptom. GI symptom scores were summarized using descriptive statistics at week 2, week 3, week 4, week 8, week 12, week 16, week 20 and EOT.

End point type	Secondary

Secondary: Number of Participants with GI Bowel Movements item scoring in Chelation naive participants

End point title	Number of Participants with GI Bowel Movements item scoring in Chelation naive participants
-----------------	---

End point description:

The GI symptom questionnaire consisted of 6 items, 5 of which were scored using a 1-5 rating scale. The sixth item assessed bowel movement frequency during the past week, using 7 response options 0 = 0 ("None"), 1 = 1, 2 = 2, 3 = 3, 4 = 4, 5 = "5 - 10" and 6 = "11 or more". The GI bowel movements

item score was presented descriptively using frequency counts.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent adverse events (TEAEs) were collected from first dose of study treatment until end of study treatment plus 30 days post-treatment, assessed for approximately 28 weeks.

Assessment type	Systematic

Reporting groups

Reporting group title	All Patients
-----------------------	--------------

Reporting group description:

All Patients

Serious adverse events	All Patients		
Total subjects affected by serious adverse events			
subjects affected / exposed	2 / 44 (4.55%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		
General disorders and administration site conditions			
Pyrexia			
subjects affected / exposed	1 / 44 (2.27%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Infections and infestations			
Bronchitis			
subjects affected / exposed	1 / 44 (2.27%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	All Patients		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	29 / 44 (65.91%)		
Investigations			

Urine protein/creatinine ratio increased subjects affected / exposed occurrences (all)	12 / 44 (27.27%) 14		
Blood creatinine increased subjects affected / exposed occurrences (all)	9 / 44 (20.45%) 12		
Alanine aminotransferase increased subjects affected / exposed occurrences (all)	7 / 44 (15.91%) 11		
Bilirubin conjugated increased subjects affected / exposed occurrences (all)	6 / 44 (13.64%) 6		
General disorders and administration site conditions Pyrexia subjects affected / exposed occurrences (all)	5 / 44 (11.36%) 5		
Gastrointestinal disorders Diarrhoea subjects affected / exposed occurrences (all)	4 / 44 (9.09%) 4		
Respiratory, thoracic and mediastinal disorders Cough subjects affected / exposed occurrences (all) Rhinorrhoea subjects affected / exposed occurrences (all)	6 / 44 (13.64%) 8 3 / 44 (6.82%) 5		
Infections and infestations Gastroenteritis subjects affected / exposed occurrences (all) Upper respiratory tract infection subjects affected / exposed occurrences (all)	4 / 44 (9.09%) 5 10 / 44 (22.73%) 13		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 April 2018	Deferasirox FCT 90 mg, 180 mg, and 360 mg (Deferasirox FCT), was commercially available in some participating countries but not in all countries. The purpose of this amendment was to enable Novartis Drug Supply Management to supply labeled study drug to countries where Deferasirox FCT was not commercially available and also to enable countries where Deferasirox FCT was commercially available to follow their local processes for using commercial products in clinical studies. Two guidances were provided related to collection of Observer Reported Outcomes (ObsROs). In addition, some updates were made to provide further clarification on some aspects of the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
