

## Clinical trial results:

**A randomized, double-blind, placebo-controlled, multicenter, Phase II study to assess the efficacy and safety of filgotinib administered for 16 weeks to subjects with moderately to severely active psoriatic arthritis**

**Summary**

EudraCT number	2016-003637-14
Trial protocol	EE ES CZ BE BG
Global end of trial date	12 March 2018

### Results information

Result version number	v1 (current)
This version publication date	23 March 2019
First version publication date	23 March 2019

### Trial information

#### Trial identification

Sponsor protocol code	GLPG0634-CL-224
-----------------------	-----------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03101670
WHO universal trial number (UTN)	-

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

Analysis stage	Final
Date of interim/final analysis	17 October 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 March 2018
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

Main objective of the trial:

Primary Objective:

- Evaluate the effect of filgotinib compared to placebo on the signs and symptoms of peripheral arthritis, as assessed by the ACR20 at Week 16.

Secondary Objectives:

- Evaluate the effect of filgotinib compared to placebo on:
  - The signs and symptoms of psoriatic arthritis (PsA)
  - The signs and symptoms of peripheral arthritis
  - Psoriasis
  - Enthesitis
  - Dactylitis
  - Physical function
  - Fatigue and general quality of life
- Evaluate the safety and tolerability of filgotinib

---

Protection of trial subjects:

Study GLPG0634-CL-224 was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Council for Harmonisation (ICH) guideline for Good Clinical Practice (GCP) (Sections 7.6 and 8.2) and the original principles embodied in the Declaration of Helsinki. These standards are consistent with the requirements of the European Community Directive 2001/20/EC. For Ukraine, standards are in accordance with Ukraine Guidance "Medicinal Products. Good clinical practice CCT-H MO3Y 42-7.0:2008" approved by MoH Order of 16.02.2009 № 95 and with consideration of requirements of Directive 2001/20/EC.

The investigator (or designee) was responsible for obtaining written informed consent from each individual who participated in this study after adequate explanation of the aims, methods, objectives, and potential hazards of the study and before undertaking any study-related procedures. Subjects were informed that they were completely free to refuse to enter the study or to withdraw from it at any time for any reason.

**Population of trial subjects**

---

**Subjects enrolled per country**

---

Country: Number of subjects enrolled	Poland: 35
Country: Number of subjects enrolled	Spain: 11
Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	Bulgaria: 12
Country: Number of subjects enrolled	Czech Republic: 6
Country: Number of subjects enrolled	Estonia: 15
Country: Number of subjects enrolled	Ukraine: 51
Worldwide total number of subjects	131
EEA total number of subjects	80

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	118
From 65 to 84 years	13
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted from 09-March-2017 to 12-March-2018 in 25 investigational sites in 7 countries: Bulgaria, Czech Republic, Estonia, Poland, Ukraine, Belgium and Spain.

### Pre-assignment

Screening details:

In total, 191 subjects were screened, of whom 131 were randomized and received at least one dose of study drug.

### Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Filgotinib
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Filgotinib
Investigational medicinal product code	GLPG0634
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

1 filgotinib 200 mg tablet once daily for 16 weeks.

<b>Arm title</b>	Placebo
Arm description: -	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

1 placebo tablet once daily for 16 weeks.

<b>Number of subjects in period 1</b>	Filgotinib	Placebo
Started	65	66
Completed	60	64
Not completed	5	2
Adverse event, serious fatal	1	-
Consent withdrawn by subject	2	1
Adverse event, non-fatal	1	-
Lack of efficacy	1	1

## Baseline characteristics

### Reporting groups

Reporting group title	Filgotinib
Reporting group description: -	
Reporting group title	Placebo
Reporting group description: -	

Reporting group values	Filgotinib	Placebo	Total
Number of subjects	65	66	131
Age categorical Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	0	0	0
Adolescents (12-17 years)	0	0	0
Adults (18-64 years)	58	60	118
From 65-84 years	7	6	13
85 years and over	0	0	0
Age continuous Units: years			
median	49	51	
full range (min-max)	22 to 69	23 to 72	-
Gender categorical Units: Subjects			
Female	36	30	66
Male	29	36	65
Race Units: Subjects			
White	65	66	131
BMI Units: kg/m <sup>2</sup>			
median	27.85	29.45	
full range (min-max)	17.17 to 51.05	19.38 to 52.12	-

## End points

### End points reporting groups

Reporting group title	Filgotinib
Reporting group description: -	
Reporting group title	Placebo
Reporting group description: -	

### Primary: American College of Rheumatology 20% improvement (ACR20) Response

End point title	American College of Rheumatology 20% improvement (ACR20) Response
-----------------	---

End point description:

The signs and symptoms of peripheral arthritis were measured using ACR20.  
The primary end point was the percentage of subjects achieving ACR20 at Week 16.

A subject achieved ACR20 response when this subject had:

- $\geq 20\%$  improvement from baseline in the 68 tender joint count (TJC68), and
- $\geq 20\%$  improvement from baseline in the 66 swollen joint count (SJC66), and
- $\geq 20\%$  improvement from baseline in at least 3 of the following 5 criteria:
  - Patient's Global Assessment of Disease Activity (PGADA) (0–100 mm visual analog scale (VAS))
  - Physician's Global Assessment of Disease Activity (PhGADA) (0–100 mm VAS)
  - Patient's Global Assessment of psoriatic arthritis (PsA) pain intensity (0–100 mm VAS)
  - Patient's assessment of physical function as measured by Health Assessment Questionnaire-Disability Index (HAQ-DI) score
  - C-Reactive Protein (CRP)

End point type	Primary
----------------	---------

End point timeframe:

From Baseline to Week 16.

End point values	Filgotinib	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	65	66		
Units: percent				
number (confidence interval 95%)				
Week 16	80.0 (68.73 to 87.92)	33.3 (23.16 to 45.34)		

### Statistical analyses

Statistical analysis title	Treatment Difference (Filgotinib 200 mg - Placebo)
----------------------------	--

Statistical analysis description:

ACR20 Response Rate difference at Week 16 (NRI)

Comparison groups	Filgotinib v Placebo
-------------------	----------------------

Number of subjects included in analysis	131
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.0001
Method	Cochran-Mantel-Haenszel
Parameter estimate	Mean difference (final values)
Point estimate	46.7
Confidence interval	
level	95 %
sides	2-sided
lower limit	30.2
upper limit	59.56

## Secondary: Minimal Disease Activity (MDA) Response

End point title	Minimal Disease Activity (MDA) Response
-----------------	---

End point description:

The disease activity in PsA was measured using the MDA, which is a measure to indicate disease remission. The endpoint was the percentage of subjects achieving MDA at Week 16.

A subject was classified as having achieved MDA when at least 5 out of 7 of the following criteria were met:

- TJC68  $\leq$  1
- SJC66  $\leq$  1
- Psoriasis Area and Severity Index (PASI)  $\leq$  1 for subjects with a baseline affected Body Surface Area (BSA) of  $\geq$  3% (or for subjects with a baseline affected BSA < 3%, this criterion was considered met)
- Patient's Global Assessment of PsA pain intensity score  $\leq$  15 (0 to 100 mm VAS)
- PGADA  $\leq$  20 (0 to 100 mm VAS)
- HAQ-DI  $\leq$  0.5
- Spondyloarthritis Research Consortium of Canada (SPARCC) Enthesitis Index  $\leq$  1 for subjects with enthesitis (SPARCC Enthesitis Index > 0) at baseline (or for subjects without enthesitis [SPARCC = 0] at baseline, this criterion was considered met).

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline to Week 16.

End point values	Filgotinib	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	65	66		
Units: percent				
number (confidence interval 95%)				
Week 16	23.1 (14.51 to 34.64)	9.1 (4.23 to 18.45)		

## Statistical analyses

<b>Statistical analysis title</b>	Treatment difference (Filgotinib 200 mg - Placebo)

level	95 %
sides	2-sided
lower limit	4.94
upper limit	29.15

## Secondary: Disease Activity Score for 28 joint count using C-reactive protein - DAS28(CRP)

End point title	Disease Activity Score for 28 joint count using C-reactive protein - DAS28(CRP)
-----------------	---

End point description:

The DAS28(CRP) is a composite score combining several parameters.

DAS28(CRP) was calculated as follows:

$$\text{DAS28(CRP)} = 0.56 \times \sqrt{\text{TJC28}} + 0.28 \times \sqrt{\text{SJC28}} + 0.36 \times \ln(\text{CRP} + 1) + 0.014 \times \text{PGADA} + 0.96$$

Where:

- $\ln(\text{CRP} + 1)$  is the natural logarithm of (CRP value [mg/L] + 1)
- PGADA is on a 0 to 100 mm VAS scale.

The DAS28(CRP) could range from 2 to 10, with a higher value indicating a more severe disease activity status.

End point type	Secondary
----------------	-----------

End point timeframe:  
From Baseline to Week 16.

End point values	Filgotinib	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	65	66		
Units: score on a scale				
arithmetic mean (standard deviation)				
Baseline	4.9 (± 1.00)	5.1 (± 1.04)		
Week 16	2.9 (± 1.09)	4.1 (± 1.22)		

## Statistical analyses

<b>Statistical analysis title</b>	Treatment Difference (Filgotinib 200 mg - Placebo)
Statistical analysis description: Comparison of DAS28(CRP) change from baseline at Week 16 (LOCF)

## Secondary: European League Against Rheumatism (EULAR) response and remission

End point title	European League Against Rheumatism (EULAR) response and remission
-----------------	---

End point description:

The end point was the percentage of subjects achieving EULAR response (good, moderate or none) or EULAR remission at Week 16.

DAS28 (CRP) was categorized into EULAR response categories (none, moderate, good) as follows:

Good = Actual DAS28 (CRP) ≤ 3.2 AND Improvement in DAS28 (CRP) from baseline > 1.2;

Moderate = Actual DAS28 (CRP) ≤ 3.2 AND Improvement in DAS28 (CRP) from baseline > 0.6 to ≤ 1.2, Actual DAS28 (CRP) > 3.2 to ≤ 5.1 or > 5.1 AND Improvement in DAS28 (CRP) from baseline > 1.2, or Actual DAS28 (CRP) > 3.2 to ≤ 5.1 AND Improvement in DAS28 (CRP) from baseline > 0.6 to ≤ 1.2.

None = Actual DAS28 (CRP) > 5.1 AND Improvement in DAS28 (CRP) from baseline > 0.6 to ≤ 1.2;

Improvement in DAS28 (CRP) from baseline ≤ 6.0 irrespective of the Actual DAS28 (CRP);

EULAR remission was defined when scores on TJC28, SJC28, CRP, and PGADA were all ≤ 1.

End point type	Secondary
End point timeframe:	
From Baseline to Week 16.	

End point values	Filgotinib	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	65	66		
Units: percent

## Secondary: Psoriatic Arthritis Response Criteria (PsARC)

End point title	Psoriatic Arthritis Response Criteria (PsARC)
-----------------	---

End point description:

The end point was the percentage of subjects achieving PsARC response at Week 16.

A PsARC responder was defined as having an improvement in  $\geq 2$  of the 4 factors (with at least one factor being a joint count) and no worsening in the remaining factors:

- TJC68 (improvement defined as a decrease from baseline of  $\geq 30\%$ )
- SJC66 (improvement defined as a decrease from baseline of  $\geq 30\%$ )
- PGADA (0 to 100 mm VAS, improvement defined as a decrease from baseline of  $\geq 20$  mm)

- PhGADA (0 to 100 mm VAS, improvement defined as a decrease from baseline of  $\geq 20$  mm)

End point type	Secondary
End point timeframe:

Dispersion value	3.93

## Secondary: 66/68-Joint Count

End point title	66/68-Joint Count
End point description: Each of 66 joints were evaluated for swelling (SJC66) and each of 68 joints for tenderness (TJC68).  The assessment for each joint was from the following selections: tender only, swollen only, tender and swollen, asymptomatic, temporarily not assessable, or permanently not assessable. Both "temporarily not assessable" and "permanently not assessable" selections were treated as missing assessments.	
End point type	Secondary
End point timeframe: From Baseline to Week 16.

## Secondary: Psoriasis Area and Severity Index (PASI) Score Including Body Surface Area

End point title	Psoriasis Area and Severity Index (PASI) Score Including Body Surface Area
-----------------	--

End point description:

PASI score was used to measure the severity & extent of psoriasis. Psoriasis representative sites were selected for each body region (head [h], upper limbs [u], trunk [t], & lower limbs [l]), & were separately scored by using 3 parameters (erythema [E], infiltration [I] & desquamation [D]), each of which was graded on a severity scale of 0 to 4 (0 = none; 4 = very severe). The area-wise % involvement of the involved sites (head [Ah], upper limbs [Au], trunk [At], & lower limbs [Al]) was calculated as: 0 = no involvement, 1 = < 10%, 2 = 10% to < 30%, 3 = 30% to < 50%, 4 = 50% to < 70%, 5 = 70% to < 90%, & 6 = 90% to 100%.

The formula for PASI score was:

$$\text{PASI} = 0.1 \times (\text{Eh} + \text{Ih} + \text{Dh}) \times \text{Ah} + 0.2 \times (\text{Eu} + \text{Iu} + \text{Du}) \times \text{Au} + 0.3 \times (\text{Et} + \text{It} + \text{Dt}) \times \text{At} + 0.4 \times (\text{El} + \text{Il} + \text{Dl}) \times \text{Al}$$

The total PASI score ranged from 0 (no disease) to 72 (maximal disease but was considered unreliable when BSA < 3).

End point values reported are for the subgroup of subjects who had at least 3% BSA at baseline.

## Secondary: Modified Nail Psoriasis Area and Severity Index (mNAPSI)

End point title	Modified Nail Psoriasis Area and Severity Index (mNAPSI)
End point description: The mNAPSI was used to assess each nail abnormality for each of the subject's nails. Three features or groups of features (pitting, onycholysis together with oil-drop dyschromia, and crumbling) of each fingernail were graded on a scale from 0 to 3. Four features (leukonychia, splinter hemorrhages, hyperkeratosis, and red spots in the lunula) were graded as either present (1) or absent (0) for each fingernail. Each fingernail had a score between 0 and 13. The total mNAPSI score was the sum of all individual scores of all abnormalities across all fingernails, and ranged from 0 to 130.	
End point values are reported for the subgroup of subjects who had psoriatic nails at baseline.	
End point type	Secondary
End point timeframe: From Baseline to Week 16.

## Secondary: Spondyloarthritis Research Consortium of Canada (SPARCC) Enthesitis Index

End point title	Spondyloarthritis Research Consortium of Canada (SPARCC) Enthesitis Index
-----------------	---

### End point description:

The enthesitis examination was based on 16 anatomical sites: the medial epicondyle, the lateral epicondyle, the supraspinatus insertion, the bilateral greater trochanter, the quadriceps tendon insertion into superior border of patella, the patellar ligament insertion into inferior pole of patella or tibial tuberosity, the Achilles tendon insertion, and the plantar fascia insertion, all left and right. Tenderness at each site was quantified on a dichotomous basis: 0 means nontender and 1 means tender. The SPARCC Enthesitis Index was derived as the sum of the tenderness over the 16 sites mentioned above and ranges from 0 to 16.

End point values are reporting for the subgroup of patients who had enthesitis at baseline according to the SPARCC.

End point type	Secondary

### Secondary: Leeds Dactylitis Index (LDI)

End point title	Leeds Dactylitis Index (LDI)
-----------------	------------------------------

End point description:

The LDI measured the ratio of the circumference of the affected digit to the circumference of the digit on the contralateral hand or foot using a Leeds Dactylometer.

LDI score of a dactylitic finger/toe =  $\{[(A/B)-1] \times 100\} \times C$

Where:

A = circumference of the dactylitic finger/toe (mm)

B = circumference of the contralateral digit (mm)

C = tenderness score (0 = no tenderness, 1 = tender)

If both ipsilateral and contralateral digits were thought to be dactylitic, then the reference value was used as the comparator (ie, B in the above formula). Binary tenderness score was used in LDI score calculation.

The total LDI score equaled to the sum of the nonnegative individual LDI scores across all fingers and toes.

End point values are reported for the subgroup of patients who had dactylitis at baseline according to the LDI. This index has no bounds and higher scores indicate more severe disease activity.

## Secondary: Psoriatic Arthritis Impact of Disease (PsAID)

End point title	Psoriatic Arthritis Impact of Disease (PsAID)
-----------------	---

End point description:

PsAID was calculated using the following formula:

$$\text{PsAID} - 9 = \text{PsAID1 (pain) NRS} \times 0.174 + \text{PsAID2 (fatigue) NRS} \times 0.131 + \text{PsAID3 (skin) NRS} \times 0.121 + \text{PsAID4 (work and/or leisure activities) NRS} \times 0.110 + \text{PsAID5 (function) NRS} \times 0.107 + \text{PsAID6 (discomfort) NRS} \times 0.098 + \text{PsAID7 (sleep) NRS} \times 0.089 + \text{PsAID8 (coping) NRS} \times 0.087 + \text{PsAID9 (anxiety) NRS} \times 0.085$$

Each of the 9 items was on a scale of 0 to 10, so the PsAID score also gave a number between 0 and 10.

A higher score on the PsAID indicated more impact of the disease.

deaths causally related to treatment / all	1 / 1	0 / 0	

Frequency threshold for reporting non-serious adverse events: 2 %

Non-serious adverse events	Filgotinib	Placebo	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	37 / 65 (56.92%)	39 / 66 (59.09%)	
Investigations			

Blood cholesterol increased subjects affected / exposed occurrences (all)	5 / 65 (7.69%) 5	0 / 66 (0.00%) 0	
Gamma-glutamyltransferase increased subjects affected / exposed occurrences (all)	4 / 65 (6.15%) 4	0 / 66 (0.00%) 0	
Blood creatine phosphokinase increased subjects affected / exposed occurrences (all)	2 / 65 (3.08%) 2	1 / 66 (1.52%) 1	
Blood glucose increased subjects affected / exposed occurrences (all)	2 / 65 (3.08%) 2	1 / 66 (1.52%) 1	
Alanine aminotransferase increased subjects affected / exposed occurrences (all)	1 / 65 (1.54%) 1	2 / 66 (3.03%) 2	
Nervous system disorders Headache subjects affected / exposed occurrences (all)	3 / 65 (4.62%) 4	5 / 66 (7.58%) 7	
Dizziness subjects affected / exposed occurrences (all)	2 / 65 (3.08%) 2	2 / 66 (3.03%) 2	
Blood and lymphatic system disorders Lymphopenia subjects affected / exposed occurrences (all)	0 / 65 (0.00%) 0	2 / 66 (3.03%) 2	
Gastrointestinal disorders Diarrhoea subjects affected / exposed occurrences (all)	2 / 65 (3.08%) 3	2 / 66 (3.03%) 2	
Abdominal pain subjects affected / exposed occurrences (all)	2 / 65 (3.08%) 2	0 / 66 (0.00%) 0	
Nausea subjects affected / exposed occurrences (all)	2 / 65 (3.08%) 4	0 / 66 (0.00%) 0	

Skin and subcutaneous tissue disorders Psoriasis subjects affected / exposed occurrences (all)	3 / 65 (4.62%) 3	3 / 66 (4.55%) 3	
Musculoskeletal and connective tissue disorders Back pain subjects affected / exposed occurrences (all)	2 / 65 (3.08%) 2	0 / 66 (0.00%) 0	
Infections and infestations Nasopharyngitis subjects affected / exposed occurrences (all)  Urinary tract infection subjects affected / exposed occurrences (all)	8 / 65 (12.31%) 10  1 / 65 (1.54%) 1	10 / 66 (15.15%) 11  2 / 66 (3.03%) 2	
Metabolism and nutrition disorders Hyperlipidaemia subjects affected / exposed occurrences (all)  Hyperglycaemia subjects affected / exposed occurrences (all)	2 / 65 (3.08%) 2  1 / 65 (1.54%) 1	0 / 66 (0.00%) 0  2 / 66 (3.03%) 2	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 June 2017	The protocol was updated with current clinical information around serious infections and lymphoma and other malignancies in the benefit/risk assessment in accordance with the most current version of the Investigator's Brochure (Edition v 12, dated (22 May 2017)). Also, an additional optional sub study in which urine and stool samples will be collected for biomarker analysis was added.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
