

Table 14.61 Dose proportionality for last dose of GR3027: C_{max} 0 to 12h (PKASC)

Parameter ID	Parameter	Proportionality constant (β)	90% confidence interval	Model	R-Squared
C _{MAX}	C _{max} (ng/mL)	1.2239	(1.0349, 1.4129)	$\ln C_{MAX} = 1.7264 + 1.2239 \times [\ln Dose]$	0.89
<p>The following model was used to estimate β and the corresponding 90% confidence interval: $\ln(C_{MAX}) = \text{Intercept} + \beta \times \ln(\text{Dose})$</p> <p>Program: \Subprogs\Tables\PK dose prop.sas</p> <p>Date and time program was run: 2020-03-05T10:52.</p> <p>Source: Listing 16.2.4.4 PK parameters; Dataset: ADaM.ADPP 2020-02-27T10:10</p>
