Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 December 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 December 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study is to assess the efficacy of TAK-659 measured by the independent radiologic review committee (IRC)-assessed overall response rate (ORR) in participants with relapsed or refractory DLBCL.

Protection of trial subjects:

All study participants were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 October 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 14
Country: Number of subjects enrolled	United Kingdom: 6
Country: Number of subjects enrolled	Italy: 8
Country: Number of subjects enrolled	Spain: 6
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	United States: 14
Worldwide total number of subjects	49
EEA total number of subjects	34

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	23
From 65 to 84 years	26
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants took part in the study at 26 investigative sites in France, Great Britain, Italy, Spain, Canada, United States from 10 October 2017 to 17 December 2019. The study was terminated by the sponsor before the initiation of the stage 2 efficacy evaluation.

Pre-assignment

Screening details:

Participants with a diagnosis of relapsed or refractory diffuse large B-cell lymphoma who had at least 2 prior lines of chemotherapy were enrolled in Cohorts A and B. Cohort A received a single dose and Cohort B received ramp-up doses of TAK-659 in Stage 1 of the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort A: TAK-659 100 mg

Arm description:

TAK-659 100 mg tablet, orally, once daily (QD), during each 28-days cycle (median exposure was 41 days).

Arm type	Experimental
Investigational medicinal product name	TAK-659
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

TAK-659 tablets

Arm title	Cohort B: TAK-659 Ramp-up Dosing
------------------	----------------------------------

Arm description:

TAK-659 60-100 mg tablet, orally, QD, dose based on safety and tolerability during each 28-days cycle (median exposure was 28 days).

Arm type	Experimental
Investigational medicinal product name	TAK-659
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

TAK-659 tablets

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From the signing of the informed consent form (ICF) through 28 days after administration of the last dose of study drug or until the start of subsequent anticancer therapy, whichever occurs first (Up to approximately 14 months).

Adverse event reporting additional description:

At each visit the investigator had to document any occurrence of adverse events and abnormal laboratory findings. Any event spontaneously reported by the participant or observed by the investigator was recorded, irrespective of the relation to study treatment.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 November 2017	<ul style="list-style-type: none">• The study design was revised to add a dose exploration phase (Stage 1) to select the dosing regimen for use in the efficacy evaluation phase of the study (Stage 2), and statistical methods were revised accordingly.• Clinical experience with TAK-659 was revised to include updated safety and efficacy data from Studies C34001 and C34002, and the rationale for dose and schedule selection was revised with updated safety and efficacy data from Study C34001.• The objectives and endpoints were revised to reflect new 2-phase study design: dose exploration phase, (Stage 1) and efficacy evaluation phase (Stage 2). Secondary objectives and endpoints were revised, as were PK measurements.• The expected numbers of participants and study centers and the expected duration of the study were increased.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
