Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 October 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 November 2023
Global end of trial reached?	Yes
Global end of trial date	22 July 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- To assess the safety and tolerability of rMenB+OMV NZ and MenACWY, when administered concomitantly or alone, in healthy subjects 16-18 years of age.
- To demonstrate the non-inferiority of the antibody response to rMenB+OMV NZ given concomitantly with MenACWY to healthy subjects 16-18 years of age compared to rMenB+OMV NZ administered alone, as measured by serum bactericidal assay using human complement (hSBA) Geometric Mean Titers (GMTs) against *N. meningitidis* serogroup B indicator strains M14459 (fHbp), 96217 (NadA), NZ98/254 (PorA) and M07-0241084 (NHBA), at 1 month after the second vaccination with rMenB+OMV NZ.
- To demonstrate the non-inferiority of the antibody response to MenACWY given concomitantly with rMenB+OMV NZ to healthy subjects 16-18 years of age compared to MenACWY administered alone, as measured by hSBA GMTs against each of the *N. meningitidis* serogroups A, C, W and Y, at 1 month after the (study) vaccination with MenACWY.

Protection of trial subjects:

Vaccine administration was preceded by a review of the subjects' medical history (including previous vaccination and occurrence of undesirable events) and a general physical examination at the first visit and symptom-directed physical examination before subsequent vaccinations. Protocol procedures, including blood sampling, were done by a qualified healthcare professional. The subjects were observed closely for at least 30 minutes following the administration of the vaccine(s)/product(s), with appropriate medical treatment readily available in case of anaphylaxis and syncope.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 August 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Italy: 111
Country: Number of subjects enrolled	United States: 834
Worldwide total number of subjects	945
EEA total number of subjects	111

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	864
Adults (18-64 years)	81
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study ended on Day 271 for participants who had not reached Day 271 when Protocol Amendment 7 took effect, and on Day 451 for those who had already passed Day 271. Safety follow-up period for each participant was from Day 1 up to Day 451 or Day 271 for participants who have not reached Day 271 at the time Protocol Amendment 7 took effect.

Pre-assignment

Screening details:

A total of 945 participants were enrolled in the study, of which only 940 were randomized into the 3 treatment groups. After randomization, 2 participants did not receive the vaccine and making it a total of 938 participants in the exposed set.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Monitor, Data analyst, Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	MenB+MenACWY Group

Arm description:

Participants received 1 dose of rMenB+OMV NZ vaccine administered concomitantly with 1 dose of MenACWY vaccine, as separate injections in each arm at Day 1, 1 dose of rMenB+OMV NZ vaccine at Day 61 and 1 dose of placebo at Day 91.

Arm type	Experimental
Investigational medicinal product name	rMenB+OMV NZ
Investigational medicinal product code	
Other name	Bexsero
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

2 dose of rMenB+OMV NZ vaccine administered intramuscularly.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

1 dose of Placebo administered intramuscularly.

Investigational medicinal product name	MenACWY
Investigational medicinal product code	
Other name	Menveo
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

1 dose of MenACWY vaccine administered intramuscularly.

Arm title	MenB Group
------------------	------------

Arm description:

Participants received 1 dose of rMenB+OMV NZ vaccine administered concomitantly with 1 dose of

placebo, as separate injections in each arm at Day 1, 1 dose of rMenB+OMV NZ vaccine at Day 61 and 1 dose of MenACWY at Day 91.

Arm type	Experimental
Investigational medicinal product name	rMenB+OMV NZ
Investigational medicinal product code	
Other name	Bexsero
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

2 dose of rMenB+OMV NZ vaccine administered intramuscularly.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

1 dose of Placebo administered intramuscularly.

Investigational medicinal product name	MenACWY
Investigational medicinal product code	
Other name	Menveo
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

1 dose of MenACWY vaccine administered intramuscularly.

Arm title	MenACWY Group
------------------	---------------

Arm description:

Participants received 1 dose of MenACWY vaccine administered concomitantly with 1 dose of placebo, as separate injections in each arm at Day1, 1 dose of rMenB+OMV NZ vaccine each administered at Day 61 and at Day 91.

Arm type	Experimental
Investigational medicinal product name	rMenB+OMV NZ
Investigational medicinal product code	
Other name	Bexsero
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

2 dose of rMenB+OMV NZ vaccine administered intramuscularly.

Investigational medicinal product name	MenACWY
Investigational medicinal product code	
Other name	Menveo
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

1 dose of MenACWY vaccine administered intramuscularly.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

1 dose of Placebo administered intramuscularly.

Number of subjects in period 1 ^[1]	MenB+MenACWY Group	MenB Group	MenACWY Group
Started	310	308	320
Completed	297	284	298
Not completed	13	24	22
Adverse event, non-fatal	-	-	1
Migrated / moved from the study area	-	-	1
Not specified	1	2	3
Lost to follow-up	6	13	9
Consent withdrawal, not due to a (S)AE	5	9	6
Protocol deviation	1	-	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: A total of 945 participants were enrolled in the study, of which only 940 were randomized into the 3 treatment groups. After randomization, 2 participants did not receive the vaccine and making it a total of 938 participants in the exposed set.

Primary: Number of participants with solicited local adverse events (AEs) after the vaccination with rMenB+OMV NZ at Day 1

End point title	Number of participants with solicited local adverse events (AEs) after the vaccination with rMenB+OMV NZ at Day 1 ^[1]
End point description: Solicited local adverse events assessed are injection site pain, erythema, swelling, induration. Any solicited local AEs = occurrence of the symptom regardless of intensity grade. Analysis was performed on the Exposed set (ES), which included all participants who received at least one dose of the study treatment and had the electronic diary (eDiary) for solicited events completed after the administration of study treatment and for whom data were available during the specified period. Allocation per group is based on the treatment administered. Only participants with data available at specified timepoints were included in the analysis.	
End point type	Primary
End point timeframe: During 7 days after the rMenB+OMV NZ vaccination at Day 1	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: The analysis of this primary endpoint was descriptive i.e. no statistical hypothesis test was performed.

Primary: Number of participants with any unsolicited AEs (including all Serious Adverse Events) at Day 1

End point title	Number of participants with any unsolicited AEs (including all Serious Adverse Events) at Day 1 ^[22]
-----------------	---

End point description:

Unsolicited adverse events are defined as any AE reported in addition to those solicited during the clinical study. Also, any 'solicited' symptom with onset outside the specified period of follow-up for solicited symptoms are reported as an unsolicited adverse event. Any solicited AE that has not resolved within 30 days post vaccination and is reported during clinic visits or safety follow-up calls is entered into the subject's electronic Case Report Form (eCRF) as an unsolicited AE. Serious Adverse Events (SAEs) are any untoward medical occurrence that result in death, are life-threatening, require hospitalization or prolongation of existing hospitalization, result in disability/incapacity and is a congenital anomaly/birth defect in the offspring of a study subject. Analysis was performed on ES population. Only participants with data available at specified timepoints were included in the analysis.

Immune response to MenACWY given with or without rMenB+OMV NZ, as measured by lectrochemiluminescence-based multiplex (ECL) GMCs against each of the serogroups A, C, W and Y. ECL (validated assay) was used because ELISA is not validated. Analysis was performed on the PPS population, which included participants who received at least 1 dose of the study intervention to which they were randomized and had post-vaccination data available at the specified timepoint minus participants with protocol deviations that led to exclusion from the PPS. 99999" is used as a placeholder value for the results for all the groups since the analysis of final results for these groups is ongoing and will be updated subsequently.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Solicited AEs: within 7 days post-vaccination. Unsolicited AEs: within 30 days post-vaccination. All-cause mortality, SAEs, MAAEs, AEs leading to withdrawal, and AESIs: monitored from Day 1 to study end at Day 271 or Day 451, depending on participation date

Assessment type	Systematic

Reporting groups

Reporting group title	MenB+MenACWY Group
-----------------------	--------------------

Reporting group description:

Participants received 1 dose of rMenB+OMV NZ vaccine administered concomitantly with 1 dose of MenACWY vaccine, as separate injections in each arm at Day 1, 1 dose of rMenB+OMV NZ vaccine at Day 61 and 1 dose of placebo at Day 91.

Reporting group title	MenACWY Group
-----------------------	---------------

Reporting group description:

Participants received 1 dose of MenACWY vaccine administered concomitantly with 1 dose of placebo, as separate injections in each arm at Day1, 1 dose of rMenB+OMV NZ vaccine each administered at Day 61 and at Day 91.

Reporting group title	MenB Group
-----------------------	------------

Reporting group description:

Participants received 1 dose of rMenB+OMV NZ vaccine administered concomitantly with 1 dose of placebo, as separate injections in each arm at Day 1, 1 dose of rMenB+OMV NZ vaccine at Day 61 and 1 dose of MenACWY at Day 91.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 August 2019	As per the recommendation from CBER the study has been amended to include an update in development and validation of a new "agar-overlay" serum bactericidal assay using human serum complement (hSBA). Additional changes include validation of the MenB manual to measure immunogenicity of the meningococcal group B vaccine, a modification in the definition of 4-fold increase in post-vaccination hSBA titer definition when the pre-vaccination titer is below the limit of detection, and a modification in the population set to be used for safety analysis wherein the exposed set is to be used for all safety analyses.
23 January 2020	The inclusion of a booster recommendation in Menveo's US Prescription Insert, with the recommendation to administer the booster at least 4 years after the priming dose, has only been approved by US FDA in December 2019. As a result, the company intends to align the inclusion criterion in the V72_79 study with the recently introduced booster recommendation in the US and amend the protocol accordingly to allow inclusion of subjects who have received a meningococcal ACWY vaccine 4 years or greater in the past.
21 June 2022	The purpose of the amendment is to update the exclusion criteria of the protocol, align COVID-19 reporting requirements to local guidelines, and to update the definition of End of Study (EoS).
11 October 2022	The purpose of the amendment is to shorten the safety follow-up period to 6 months in subjects who have not reached the 6-month safety follow-up after the last dose and to extend the visit window to 28 days post reference day to mitigate the impact of COVID pandemic, including quarantine, mandatory vaccination, or other disturbances in the study procedures.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
