

Clinical trial results:

A Multicenter, Double-Blind, Randomized, Placebo-Controlled, Phase 2 Study to Evaluate the Efficacy and Safety of Elafibranor at Doses of 80 mg and 120mg after 12 Weeks of Treatment in Patients With Primary Biliary Cholangitis (PBC) and Inadequate Response to Ursodeoxycholic Acid

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 October 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 October 2018
Global end of trial reached?	Yes
Global end of trial date	31 October 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the study was to evaluate the efficacy of elafibranor 80 milligram (mg) and 120 mg compared with placebo in subjects with primary biliary cholangitis (PBC) as measured by the relative change from baseline in serum alkaline phosphatase (ALP) levels.

Protection of trial subjects:

This study was conducted in accordance with the principles laid down by the 18th World Medical Assembly (Helsinki, 1964) and all applicable amendments laid down by the World Medical Assemblies, and the Good Clinical Practice (GCP) guideline (CHMP, 2016). This study also complied with applicable local regulatory requirements and laws of each country in which the study was performed, as well as any applicable guidelines.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 April 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 6
Country: Number of subjects enrolled	United Kingdom: 9
Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	United States: 23
Worldwide total number of subjects	45
EEA total number of subjects	22

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	34
From 65 to 84 years	11
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 68 subjects were screened, out of which 45 subjects were randomized, 15 subjects in each of the 3 treatment groups.

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Elafibranor 80mg

Arm description:

Subjects received elafibranor 80 milligram (mg) tablets orally once daily for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Elafibranor 80mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received elafibranor 80 milligram (mg) tablets orally once daily for 12 weeks.

Arm title	Elafibranor 120mg
------------------	-------------------

Arm description:

Subjects received elafibranor 120 mg tablets orally once daily for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Elafibranor 120mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received elafibranor 120 mg tablets orally once daily for 12 weeks.

Arm title	Placebo
------------------	---------

Arm description:

Subjects received matching placebo tablets orally once daily for 12 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received placebo tablets orally once daily for 12 weeks.

Secondary: Change From Baseline in 5D Itch Scale Total Score

End point title	Change From Baseline in 5D Itch Scale Total Score
End point description: 5D-Itch Scale is reliable, multidimensional measure of itching that has been validated in subjects with chronic pruritus to detect changes over time. It consists of 5 domains: duration, degree, direction, disability, and distribution. Duration, degree and direction domains each include 1 item, while disability domain has 4 items (sleep, leisure/social, housework/errands, work/school). All items of first 4 domains were measured on a 5-point Likert scale. Distribution domain included 16 potential locations of itch, 15 body part items (head/scalp, soles, face, palms, chest, abdomen, back, buttocks, thighs, lower legs,	

tops of feet/toes, tops of hands/fingers, upper arms, groin, forearms) and 1 point of contact with clothing/bandages. Scores of each of 5 domains are achieved separately and then summed together to obtain total 5-D score. 5-D scores can range between 5 (no pruritus) and 25 (most severe pruritus). mITT population included. N= number of subjects evaluable for this endpoint.

Secondary: Change From Baseline in Pruritus as Assessed by Visual Analogue Scale (VAS) Total Score

End point title	Change From Baseline in Pruritus as Assessed by Visual Analogue Scale (VAS) Total Score
-----------------	---

End point description:

The VAS is a reliable and validated method of pruritus assessment. The VAS is adequate in assessing the severity of the symptom; it does not take into account other aspects of pruritus, such as the relative impact of pruritus on quality of life. The VAS, for pruritus assessment, requires the subject to use abstract thought processes to convert their itch severity to a mark on a continuum. A subject draws a line anywhere on the scale ranging from 0 to 10 (where 0 represents 'no itching' and 10 represents 'worst possible itching') that best represents the severity of subject's itching and the scoring involves manual measuring of the mark with a ruler on range of 0 to 100 millimeter (mm). Higher scores indicate worse itching. mITT: randomized subjects received at least one study drug dose with available baseline value and at least one post baseline value for primary endpoint. Here 'N' (number of subjects analyzed) signifies subjects evaluable for this endpoint.

Secondary: Number of subjects With Treatment Emergent Adverse Events (TEAEs) and Serious Treatment Emergent Adverse

End point title	Number of subjects With Treatment Emergent Adverse Events (TEAEs) and Serious Treatment Emergent Adverse
-----------------	--

End point description:

An adverse event (AE) is defined as any untoward medical occurrence in patient or clinical investigation patient administered a pharmaceutical product and which does not necessarily have to have a causal relationship with this treatment. A serious adverse event (SAE) is any untoward medical occurrence that

at any dose: results in death, is life-threatening, requires inpatient hospitalization/prolongation of existing hospitalization, results in persistent or significant disability/incapacity, is congenital anomaly/birth defect, is another medically important condition. TEAEs is defined as it is not present when active phase of study begins and is not a chronic condition that is part of patient's medical history, or it is present at start of active phase or as part of patient's medical history, but severity/frequency increases during active phase. Safety Set included all randomized subjects who were administered at least one dose.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 December 2017	The overall reason for this amendment was to include an end of study (EOS) visit for all subjects who completed the double-blind treatment period (at least 16 days but not more than 30 days after visit 5 [Week 12]), to clarify instructions for investigators and to add windows for pharmacokinetic (PK) sample collection.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
