

Change from Baseline in Serum Bicarbonate Over Time (MITT Analysis Set)

CI = confidence interval; LS = least squares; MITT = modified intent-to-treat

Note: The Baseline Bicarbonate (Treatment Week 0; i.e., the mean of the Screening 1, Screening 2, and pre-dose Day 1 values, was 17.3 mEq/L in both treatment groups. Values depicted are the LS means ($\pm 95\%$ CI) change from baseline in serum bicarbonate (mEq/L). At Week 12, the LS mean serum bicarbonate increase was 4.4 (95% CI: 3.9, 5.0) mEq/L in the TRC101 treatment group vs. 1.8 (95% CI: 1.1, 2.4) mEq/L in the placebo group.
