

Clinical trial results:

A Phase 2 Randomized, Double-Blind, Placebo-Controlled Clinical Trial to Evaluate the Safety and Efficacy of BMN 111 in Infants and Young Children with Achondroplasia, Age 0 to < 60 Months

Summary

EudraCT number	2016-003826-18
Trial protocol	GB
Global end of trial date	26 January 2022

Results information

Result version number	v1 (current)
This version publication date	28 March 2023
First version publication date	28 March 2023

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002033-PIP01-16
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 January 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 January 2022
Global end of trial reached?	Yes
Global end of trial date	26 January 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objectives of the study were to:

- Evaluate the safety and tolerability of Vosoritide in children aged 0 to < 60 months with ACH
- Evaluate the effect of Vosoritide on change from baseline in length/height Z-score

Protection of trial subjects:

This clinical study was designed, implemented and reported in accordance with the protocol and also with the following:

- European Clinical Trial Directive 2001/20/EC and Good Clinical Practice (GCP) Directive 2005/28/EC, for studies conducted within any European country
- United States (US) Code of Federal Regulations (CFR) sections that address clinical research studies, and/or other national and local regulations, as applicable
- International Council on Harmonisation, Harmonised Tripartite Guideline: Guideline for GCP E6 (ICH E6)
- The ethical principles established by the Declaration of Helsinki

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 June 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	19 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 8
Country: Number of subjects enrolled	United States: 41
Country: Number of subjects enrolled	Japan: 8
Country: Number of subjects enrolled	Australia: 18
Worldwide total number of subjects	75
EEA total number of subjects	0

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	40
Children (2-11 years)	35
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This was a multi-center study conducted by 16 principal investigators at 16 study centers in four countries (United States, Australia, United Kingdom and Japan).

Pre-assignment

Screening details:

A total of 75 participants (full analysis set [FAS]) were enrolled into the study, of which 11 participants were enrolled to receive vosoritide (sentinel participants). 64 participants were randomized to receive vosoritide or placebo (32 randomized for vosoritide and 32 for placebo), which constituted the FAS (randomized).

Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

Participants & site members were blinded to study treatment. The investigator and staff involved with the study also remained blinded to the treatment randomization code. In an emergency medical situation where participant management would be determined or significantly altered by knowing the treatment assignment, the investigator could be unblinded without prior written approval from the Medical Monitor.

Arms

Are arms mutually exclusive?	Yes
Arm title	Sentinel

Arm description:

Cohort 1 Sentinel: Participants stratified by age ≥ 24 to < 60 months, received vosoritide 15 $\mu\text{g/kg/day}$ (n=4)

Cohort 2 Sentinel: Participants stratified by age ≥ 6 to < 24 months, received vosoritide 15 $\mu\text{g/kg/day}$ & 30 $\mu\text{g/kg/day}$ (n=4)

Cohort 3 Sentinel: Participants stratified by age 0 to < 6 months, received vosoritide 30 $\mu\text{g/kg/day}$ (n=3)

Arm type	Active comparator
Investigational medicinal product name	BMN 111
Investigational medicinal product code	
Other name	Vosoritide
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Cohort 1 Sentinel participants received a 15 $\mu\text{g/kg}$ vosoritide single daily subcutaneous injection for 52 weeks.

Cohort 2 Sentinel participants Initially dosed with single daily subcutaneous injection of vosoritide 15 $\mu\text{g/kg/day}$ and were adjusted to 30 $\mu\text{g/kg/day}$ following the review of safety and PK data then adjusted to 15 $\mu\text{g/kg/day}$ during the visit immediately preceding the 2-year birthday.

Cohort 3 Sentinel participants received a 30 $\mu\text{g/kg}$ vosoritide single daily subcutaneous injection for 52 weeks.

Arm title	Randomized Vosoritide
-----------	-----------------------

Arm description:

Cohort 1: Vosoritide 15 $\mu\text{g/kg/day}$ (n=15)

Cohort 2: Vosoritide 15 $\mu\text{g/kg/day}$ & 30 $\mu\text{g/kg/day}$ (n=8)

Cohort 3: Vosoritide 30 $\mu\text{g/kg/day}$ (n=9)

Arm type	Experimental
Investigational medicinal product name	BMN 111
Investigational medicinal product code	
Other name	Vosoritide
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Cohort 1: Participants received a vosoritide 15 µg/kg daily subcutaneous injection for 52 weeks.

Cohort 2: Participants received vosoritide 15 µg/kg to 30 µg/kg daily subcutaneous injection for 52 weeks.

Cohort 3: Participants received vosoritide 30 µg/kg daily subcutaneous injection for 52 weeks.

Arm title	Randomized Placebo
------------------	--------------------

Arm description:

Cohort 1: Placebo (n=16)

Cohort 2: Placebo (n=8)

Cohort 3: Placebo (n=8)

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received a placebo single daily subcutaneous injection for 52 weeks.

Number of subjects in period 1	Sentinel	Randomized Vosoritide	Randomized Placebo
Started	11	32	32
Completed	11	31	31
Not completed	0	1	1
Consent withdrawn by subject	-	-	1
AE of sudden infant death syndrome, not related	-	1	-

Primary: Number of participants with adverse events (AEs) by severity grade and study drug treatment-emergent adverse events (TEAEs)

End point title	Number of participants with adverse events (AEs) by severity grade and study drug treatment-emergent adverse events (TEAEs) ^[1]
-----------------	--

End point description:

A treatment-emergent Adverse Events (TEAE) is any Adverse Events that newly appeared, increased in frequency or worsened in severity following initiation of study drug administration. A severity grade was defined by the Common Terminology Criteria for Adverse Events (CTCAE) Version 4.03. As per CTCAE, Grade 1 scales as Mild; Grade 2 scales as Moderate; Grade 3 scales as severe or medically significant but not immediately life threatening; Grade 4 scales as life-threatening consequences; and Grade 5 scales as death related to AE. Safety Population includes all sentinel and randomized participants in the FAS who received at least one dose of vosoritide or placebo in this study.

Serious adverse event (SAE)

End point type	Primary
----------------	---------

End point timeframe:

Up to Week 56 (Safety Follow-Up +/-7d)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was analyzed for this endpoint.

End point values	Sentinel	Randomized Vosoritide	Randomized Placebo

Participants with any treatment-related AE	8	29	17	
Participants with any treatment-related SAEs	0	0	0	
Participants with any AE of CTCAE grade ≥3	0	2	3	
Participants who died	0	1	0	

Statistical analyses

No statistical analyses for this end point

Primary: Change from baseline in height Z-score at Week 52

End point title	Change from baseline in height Z-score at Week 52 ^[2]
-----------------	--

End point description:

Standing Height/body length was converted to an age-and sex-appropriate standard deviation score (SDS), also referred to as a Z-score, by comparison with reference data available for average stature children from the Centers for Disease Control and Prevention(CDC).

The primary efficacy analysis population was the subset of randomized participants in the FAS. The Full Analysis Set (FAS) was defined according to the intent-to-treat principle and included all enrolled sentinel and randomized participants with a signed informed consent.

FAS Randomized population includes randomized vosoritide (32 participants) and randomized placebo (32 participants).

FAS analysis population includes All vosoritide (43 participants) and Placebo (32 participants).

End point type	Primary
----------------	---------

End point timeframe:

Baseline to Week 52

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Statistical analysis for FAS (All Vosoritide and Placebo) includes Sentinel participants.

Secondary: Change from Baseline in functional independence measure for children (WeeFIM-II) Score at Week 52

End point title	Change from Baseline in functional independence measure for children (WeeFIM-II) Score at Week 52
-----------------	---

End point description:

The Pediatric Functional Independence Measure-II (WeeFIM®-II) is designed to measure the functional independence of children between the ages of 6 months and 18 years who have physical or general developmental limitations (Msall 1994b). The WeeFIM-II is comprised of 3 domains that are rated by clinicians based on information obtained from parents/caregivers (self-care [score range 8 to 56], mobility [score range 8 to 35], and cognition [score range 8 to 35]) and provides a total score between 18 (worst) and 126 (Best).

The Wee-FIM-II is only validated in children ages 6 months to 18 years. Therefore results for Cohort 3 is not summarized.

The number of participants analyzed is reported in sequence: (n=Cohort 1 Placebo, Cohort 1 Vosoritide, Cohort 2 Placebo, Cohort 2 Vosoritide) incl sentinel for each category.

WeeFIM-II Total Score: (n=14, 19, 6, 11)

WeeFIM : Self-Care Score: (n=14, 19, 6, 11)

WeeFIM: Mobility Score: (n=14, 19, 6, 11)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to Week 56 Safety Follow-Up.

Adverse event reporting additional description:

The Safety Population was a subset of the FAS who received at least one dose of vosoritide or placebo in the study.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 August 2018	<ul style="list-style-type: none">• The lower age range of participating participants who have a ≥ 6-month period of pretreatment growth assessment in 111-901 immediately before study entry was revised from ≥ 3 months to ≥ 6 months.• Language updated to state that no two sentinel participants would be dosed on the same day for any cohort.• Echocardiogram would be performed at the Week 56 Safety Follow-up and Early Termination visits• Use of residual plasma samples for cGMP PD biomarker assessment in all age groups was added to procedures.• An anti-vosoritide immunogenicity assessment was added at Week 3.• Bone metabolism urine biomarkers, vosoritide pharmacodynamic urine biomarkers, and urine chemistry assessments were added at Week 39.• The sleep study scheduled at the Week 26 visit was removed.• DXA scans would no longer include tibia scans.• If the 111-901 visit at which the participant entered 111-206 and the 111-206 Screening visit were on the same day, the procedures common to both visits were performed one time only.• On days when PK samples were being drawn, ECG would be performed within a 5-minute window prior to the 30-minute PK assessment.• Exclusion criterion #6 was revised from "...as determined by the Investigator based on the following assessments...) to (...as determined by the Investigator and informed by the following assessments...). The determination about whether presence of cervicomedullary compression is likely to require surgical intervention will be informed by physical exam, polysomnography, and MRI.• Exclusion criterion #15 was revised to include cervicomedullary decompression surgery (Cohorts 2 and 3 only).• Inclusion/exclusion criteria was added for Cohort 3 participants enrolling in the observational period.• A table of restricted medications, including growth hormone, was added. For participants enrolled in Cohort 3 (0 to < 6 months old), the collection period for all AEs was to begin after informed consent is obtained.
08 February 2019	<p>The following exploratory objectives were revised to secondary objectives.</p> <ul style="list-style-type: none">• Evaluate the effect of vosoritide on growth parameters and body proportions, including change from baseline in upper:lower segment ratio• Evaluate the effect of vosoritide on sleep apnea• Evaluate the effect of vosoritide on skull and brain morphology, including foramen magnum, ventricular and brain parenchymal dimensions• Describe the incidence of surgical interventions, including cervical decompression, adenotonsillectomy, and typanostomy <p>The secondary imaging assessment procedures, excluding the MRI assessment, were moved to the secondary safety variables section. The hip imaging assessment was removed, the X-ray assessment was modified to include long bone growth, and the DXA assessment would no longer include the forearm. Also, the paragraph discussing the possibility of non-radiological methods of assessment for participants in Cohort 3 was deleted.</p> <p>The screening baseline hip assessment with pelvis X-ray was removed from the Schedule of Events.</p> <p>Footnotes were changed to modify procedures and to add early termination visits (ETV) for anthropomorphic measurements, DXA, and X-rays.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
