

Clinical trial results:

International phase I/II expansion trial of the MEK inhibitor selumetinib in combination with dexamethasone for the treatment of relapsed/refractory RAS-pathway mutated paediatric and adult Acute Lymphoblastic Leukaemia

Summary

EudraCT number	2016-003904-29
Trial protocol	GB NL FR DK
Global end of trial date	26 August 2021

Results information

Result version number	v1 (current)
This version publication date	20 April 2025
First version publication date	20 April 2025

Trial information

Trial identification

Sponsor protocol code	RG_16-186
-----------------------	-----------

Additional study identifiers

ISRCTN number	ISRCTN92323261
ClinicalTrials.gov id (NCT number)	NCT03705507
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 December 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 July 2021
Global end of trial reached?	Yes
Global end of trial date	26 August 2021
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To define the recommended phase II dose (RP2D) of selumetinib in combination with dexamethasone in adult and paediatric patients with relapsed/refractory, RAS pathway mutant ALL, and to assess the preliminary anti-leukemic activity of the combination in those patients.

Protection of trial subjects:

Trial Safety Committee (TSC) was established to provide independent oversight of the trial and provide advice through its independent chair. The TSC will include a patient representative and a sponsor's representative. The Chief Investigator will report to the committee on behalf of the TMG. The TSC will assume responsibility for the oversight of the trial on behalf of the Coordinating Sponsor. The TSC will meet or hold teleconferences at least once a year, or more often if required. The TSC will take on the responsibilities similar to that of a data monitoring committee on late phase trials. Established by the Sponsor, the TSC will assess at intervals the progress of a clinical trial, the safety data, and the critical efficacy endpoints, including dose decisions, and to recommend to the Sponsor whether to continue, modify, or stop a trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 April 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 2
Country: Number of subjects enrolled	United Kingdom: 10
Worldwide total number of subjects	12
EEA total number of subjects	2

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	3

Adolescents (12-17 years)	1
Adults (18-64 years)	4
From 65 to 84 years	4
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The trial opened to recruitment on 17th April 2018 with the first patient recruited on 18th May 2018. The last patient was recruited on 10th August 2021 and the trial closed to recruitment on 3rd May 2023. Patients were recruited from sites across the UK, and one site in the Netherlands. Sites also opened in France & Denmark but did not recruit.

Pre-assignment

Screening details:

RAS pathway activating mutations (NRAS, KRAS, FLT3, PTPN11, cCBL, NF1, BRAF, IKZF2, IKZF3, IL7Rα or JAK1) were identified during the trial screening process with local analysis or central analysis by Northern Genetics Service.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Group A

Arm description:

Group A enrolled patients who are 18 years or older

Arm type	Experimental
Investigational medicinal product name	Selumetinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

All patients entered onto the dose finding element of the trial will receive treatment as per protocol. Starting dose (dose level 0) 75mg BD PO. Cycle 1 D1: single dose, Cycle 1 D4-D28: BD dosing, Subsequent cycles 2-6: D1-28: BD dosing.

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Cycle 1 D2-4 & D8-11: 6mg/m²/day, D15-18 & D22-25: 4mg/m²/day.

Cycle 2 D1-4: 4mg/m²/day

Subsequent cycles 3-6, D1-5 only 6mg/m²/day

Arm title	Group P
------------------	---------

Arm description:

Group P enrolled patients under 18 years of age

Arm type	Experimental
Investigational medicinal product name	Selumetinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

All patients entered onto the dose finding element of the trial will receive treatment as per protocol.
Starting dose (dose level -1) 20mg/m² BD PO. Cycle 1 D1 single dose, Cycle 1 D4-D28: BD dosing,
Subsequent cycles 2-6: D1-28: BD dosing.

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Cycle 1 D2-4 & D8-11: 6mg/m²/day, D15-18 & D22-25: 4mg/m²/day.

Cycle 2 D1-4: 4mg/m²/day

Subsequent cycles 3-6, D1-5 only 6mg/m²/day

Primary: Dose Limiting Toxicities

End point title	Dose Limiting Toxicities ^[1]
End point description:	
The occurrence/non-occurrence of dose limiting toxicities (DLTs) in the trial defined assessment period. A DLT is defined as any toxicity which is dose limiting, is not attributable to the disease or disease-related processes under investigation, and is considered at least possibly related to either of the investigational medicinal products (IMPs), as defined in the protocol.	
End point type	Primary
End point timeframe:	
DLTs will be assessed from the first dose on Cycle 1 Day 1 up until Cycle 1 Day 28 during Phase I only.	
Notes:	

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Primary Objective to define the recommended phase II dose (RP2D) of selumetinib/dexamethasone combination in adult and paediatric patients with relapsed/refractory RAS pathway mutant ALL. Modified 2-stage Bayesian Continual Reassessment Method (CRM) was used to determine the maximum tolerated dose independently for each patient group based on the occurrence/non-occurrence of DLT. Dose decision was then made by the Trial Safety Committee. The CRM Dose Decision endpoint is the statistical analysis

End point values	Group A	Group P

Statistical analyses

No statistical analyses for this end point

Primary: CRM Dose Decision

End point title	CRM Dose Decision ^[2]
End point description:	
The trial target rate of DLT is 0.17 (17%).	
For Group A: Dose level 0 has the closest posterior probability estimate (0.154) to this target rate of 0.17. Therefore, the modified Continual Reassessment Method (CRM) recommended dose level 0 for future adult patients (Group A).	
For Group P: Dose level -1 has the closest posterior probability estimate (0.207) to this target rate of 0.17. Therefore, the modified Continual Reassessment Method	

(CRM) recommended dose level -1 for future paediatric patients (Group P).

End point type	Primary
----------------	---------

End point timeframe:

DLTs will be assessed from the first dose on Cycle 1 Day 1 up until Cycle 1 Day 28 during Phase I only.

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Primary Objective to define the recommended phase II dose (RP2D) of selumetinib/dexamethasone combination in adult & paediatric patients with relapsed/refractory RAS pathway mutant ALL. Modified 2-stage Bayesian Continual Reassessment Method (CRM) was used to determine the maximum tolerated dose independently for each patient group based on occurrence/non-occurrence of DLT. Dose decision was then made by Trial Safety Committee. This result of posterior probability is the statistical analysis.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 July 2017	SA01: Protocol version 2.0 Submission to ethics committee to address changes made for the initial competent authority approval. Clairification of DLTs, contraception/pregnancy and associated eligibility criteria, dose rationale, risk mitigation startegy for AEs identified in Selumetinib IB.
25 October 2017	SA02: Protocol version 3.0 Various minor changes and corrections throughout protocol including changes and clarifications to schedule of events, eligibility criteria, outcome measures and IMP details.
26 January 2018	SA03: Protocol version 4.0 Change of Chief Investigator, coinvestigators, and trial management staff and updated contact details.
14 December 2018	SA07: Protocol version 5.0 Urgent Safety Measure to reduce dexamethasone dose in cycle 1 for Group A.
01 May 2019	SA10: Protocol version 6.0 Urgent Safety Measure to reduce dexamethasone dose in cycle 1 for Group P and mandate fluoroquinolone prophylaxis during cycle 1 for all patients.
09 September 2019	SA11: Protocol version 7.0 Urgent Safety Measure to amend dexamethasone dosing schedule from continuous to pulsed in cycle 1, to mandate fluoroquinolone prophylaxis during cycle 1 and 2 and to mandate co-trimoxazole prophylaxis during the trial for all patients.
29 November 2019	SA13: Protocol version 8.0 Changes and clarifications to schedule of events and sampling. Addition of possibility of continued access beyond 6 cycles of treatment. Other minor corrections/amendments.
22 March 2020	SA15: Protocol version 9.0 Clarification of screening process for central RAS mutation testing and Trial Office approved local testing throughout, and Inclusion of additional RAS-pathway activating mutations (NF1, BRAF, IKZF2, IKZF3, IL7Ra or JAK1) tested for locally that can be used for eligibility. Other minor corrections/amendments.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Trial terminated early from poor recruitment, due to a change in the standard of care for this patient population with the use of CAR-T cells.
