Notes:

General information about the trial

Main objective of the trial:

Primary Efficacy Objective (Part 1)

- To evaluate the efficacy of tildrakizumab in subjects with AS or nr-axSpA, as measured by the proportion of subjects achieving Assessment of SpondyloArthritis international Society (ASAS) criteria defined as $\geq 20\%$ improvement in 3 of 4 assessment domains (ASAS20) response criteria at Week 24.

Primary Safety Objective (Parts 1 and 2)

- To assess the safety/tolerability and immunogenicity of multiple-dose administration of tildrakizumab in subjects with AS or nr-axSpA.

Protection of trial subjects:

The trial and site activities were monitored according to the ICH-GCP guidelines considering every aspect of the trial, ensuring that the rights, safety and well-being of patients are protected and consistent with the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 February 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 June 2017	<ol style="list-style-type: none">1. Allowance of subjects who failed to meet minimal response criteria at Week 16 to continue in Part 1 and 2 of the study, with the possibility for adjustment of background therapy at Week 16.2. Amendment of primary and secondary endpoints to improve characteristics for the power of the study.3. Revision of ASAS20, ASAS40, and ASAS70 definitions for clarification.4. Addition of exclusion criteria regarding bilateral sacroiliac joint fusion and fused disc/vertebral units.5. Addition of definition of stable dose for NSAIDs.7. Addition of 2 stages to study to prioritize the development program for AS and nr-axSpA.8. Addition of requirement that any non-drug therapy was stable for 4 weeks prior to IMP initiation.
19 March 2018	<ol style="list-style-type: none">1. Added reference to LTE study throughout.2. Correction of text describing the definition of minimal response.3. Addition of text describing requirements for subjects taking low-potency opioids.4. Clarification that measurement of height was only required once, at Screening.5. Addition of high sensitivity CRP collection at Screening for subjects with non-radiographic axial spondyloarthritis.6. Editorial and administrative changes implemented throughout the document.
