Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 September 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	23 September 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to evaluate the efficacy and safety of rivoceranib plus best supportive care (BSC) compared to placebo plus BSC in participants with advanced or metastatic gastric cancer (GC).

Protection of trial subjects:

The study was conducted in accordance with the Good Clinical Practice (GCP) guideline developed by the International Conference on Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use (ICH). The clinical trial was also conducted in compliance with Declaration of Helsinki, protocol, Standard specified in the Section 3 in the Article 14 and the Section 2 in the Article 80 in Pharmaceutical Law, Notification 28 from MHLW dated March 27th, 1997 "Ordinance on the criteria for the implementation of clinical trials of the drug (GCP)".

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 March 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 19
Country: Number of subjects enrolled	Germany: 10
Country: Number of subjects enrolled	Italy: 31
Country: Number of subjects enrolled	Japan: 59
Country: Number of subjects enrolled	Korea, Republic of: 214
Country: Number of subjects enrolled	Poland: 10
Country: Number of subjects enrolled	Romania: 8
Country: Number of subjects enrolled	Russian Federation: 33
Country: Number of subjects enrolled	Taiwan: 37
Country: Number of subjects enrolled	United Kingdom: 7
Country: Number of subjects enrolled	United States: 5
Country: Number of subjects enrolled	Ukraine: 27
Worldwide total number of subjects	460
EEA total number of subjects	78

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	292
From 65 to 84 years	167
85 years and over	1

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants were randomized to receive either rivoceranib +best supportive care (BSC) or placebo +BSC for approximately 24 months. Participants who benefited from rivoceranib were permitted to continue rivoceranib during an extension period of the study, up to approximately 36 months.

Period 1

Period 1 title	Core Phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Rivoceranib Plus Best Supportive Care (BSC)

Arm description:

Participants received rivoceranib 700 milligrams (mg) orally once per day during each cycle plus BSC. BSC is defined as palliative, non-cancer therapy. Each cycle duration was 28 days.

Arm type	Experimental
Investigational medicinal product name	Rivoceranib
Investigational medicinal product code	
Other name	Apatinib
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received rivoceranib 700 milligrams (mg) orally once per day during each cycle plus BSC. BSC is defined as palliative, non-cancer therapy. Each cycle duration was 28 days.

Arm title	Placebo Plus BSC
------------------	------------------

Arm description:

Participants received matching placebo to rivoceranib orally once per day during each cycle plus BSC. BSC is defined as palliative, non-cancer therapy. Each cycle duration was 28 days.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received matching placebo to rivoceranib orally once per day during each cycle plus BSC. BSC is defined as palliative, non-cancer therapy. Each cycle duration was 28 days.

Number of subjects in period 1	Rivoceranib Plus Best Supportive Care (BSC)	Placebo Plus BSC
Started	308	152
Received at Least 1 Dose of Study Drug	307	151
Completed	52	28
Not completed	256	124
Consent withdrawn by subject	13	4
Physician decision	7	2
Death	232	110
Study Closed	-	1
Lost to follow-up	4	7

Period 2

Period 2 title	Extension Phase
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Extension Phase: Rivoceranib Plus BSC

Arm description:

Participants received rivoceranib 700 mg orally once per day during each cycle plus BSC. BSC is defined as palliative, non-cancer therapy. Each cycle duration was 28 days.

Arm type	Experimental
Investigational medicinal product name	Rivoceranib
Investigational medicinal product code	
Other name	Apatinib
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received rivoceranib 700 mg orally once per day during each cycle plus BSC. BSC is defined as palliative, non-cancer therapy. Each cycle duration was 28 days.

Arm title	Extension Phase: Placebo Plus BSC
------------------	-----------------------------------

Arm description:

Participants received matching placebo to rivoceranib orally once per day during each cycle plus BSC. BSC is defined as palliative, non-cancer therapy. Each cycle duration was 28 days.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received matching placebo to rivoceranib orally once per day during each cycle plus BSC.

BSC is defined as palliative, non-cancer therapy. Each cycle duration was 28 days.

Number of subjects in period 2	Extension Phase: Rivoceranib Plus BSC	Extension Phase: Placebo Plus BSC
Started	52	28
Completed	0	0
Not completed	52	28
Death	34	16
Study Closed	17	11
Lost to follow-up	1	1

Primary: Overall Survival (OS)

End point title	Overall Survival (OS) ^[1]
End point description: OS was defined as the time from randomization to death. Participants alive or lost to follow-up at the end of study (EOS) were censored. The Intent-to-treat (ITT) set for the OS final analysis consisted of data from all participants who were randomized, including participants who were still in OS follow-up at the time of primary analysis. In the ITT set, participants were included in the group to which they were randomized.	
End point type	Primary
End point timeframe: Day 1 (randomization) up to approximately 36 months	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Summary statistics only	

End point values	Rivoceranib Plus Best Supportive Care (BSC)	Placebo Plus BSC		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	308	152		
Units: Months				
median (confidence interval 95%)	5.82 (5.26 to 6.47)	5.13 (4.47 to 6.24)		

Statistical analyses

No statistical analyses for this end point

Secondary: Progression-free Survival (PFS) Per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1)

End point title	Progression-free Survival (PFS) Per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1)
-----------------	---

End point description:

PFS was defined as the time from randomization to either documented radiological progression or death from any cause. Participants alive and free of progression at the EOS were censored.

The ITT set consisted of data from all participants who were randomized. In the ITT set, participants were included in the group to which they were randomized.

End point type	Secondary

Secondary: Change From Baseline in Global Health Status/Quality of Life (QoL) Measured by European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Core 30 (EORTC QLQ-C30)

End point title	Change From Baseline in Global Health Status/Quality of Life (QoL) Measured by European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Core 30 (EORTC QLQ-C30)
-----------------	---

End point description:

EORTC QLQ-C30 is a cancer specific Questionnaire with 30 questions for assessing the health-related QOL of cancer participants. The questionnaire incorporates 5 functional scales, 4 symptom scales, a global QOL scale, and single items for the assessment of additional systems commonly reported by cancer participants. All items are scored on 4-point Likert scales, ranging from 1 ('not at all') to 4 ('very much'), with the exception of 2 items in the global QOL scale which use modified 7-point linear analog scales. All scores and single-items were transformed to a scale of 0 to 100. For the functioning scales, a higher score indicated greater functioning and for the symptom scales, a higher score indicated a greater symptom burden.

The ITT set consisted of data from all participants who were randomized. In the ITT set, participants were included in the group to which they were randomized. Overall number of participants indicates total number of participants.

End point title	Change From Baseline in European Organization for the Research and Treatment of Cancer Quality of Life Questionnaire-Stomach Cancer Specific (EORTC QLQ-STO22) Score
-----------------	--

End point description:

EORTC QLQ-STO22 is a 22-item gastric cancer-specific questionnaire-integrating system for assessing the health-related QOL of gastric cancer participants. Most questions use 4-point scale (1 'Not at all' to 4 'Very much'; 1 question was a yes or no answer). A linear transformation was used to standardize all scores and single-items to a scale of 0 to 100. For the functioning scales, a higher score indicates greater functioning and for the symptom scales, a higher score indicates a greater symptom burden.

The ITT set consisted of data from all participants who were randomized. In the ITT set, participants were included in the group to which they were randomized. Overall number of participants indicates total at baseline, number of participants analyzed indicates number of participants with evaluable data.

Secondary: Change From Baseline in EuroQol 5-Dimension 5-Level Visual Analogue Scale (EQ-5D-5L VAS) Score

End point title	Change From Baseline in EuroQol 5-Dimension 5-Level Visual Analogue Scale (EQ-5D-5L VAS) Score
-----------------	--

End point description:

EQ-5D-5L Questionnaire consists of EQ-5D-5L descriptive system and the visual analogue scale (VAS). The descriptive system comprises the 5 dimensions (mobility, self-care, usual activities, pain/discomfort, and anxiety/depression) and each dimension has 5 levels. The VAS is designed to rate the participant's current health state on a scale from 0 to 100, where 0 represents the worst imaginable health state and 100 represents the best imaginable health state.

The ITT set consisted of data from all participants who were randomized. In the ITT set, participants were included in the group to which they were randomized. Overall number of participants indicates total number of participants with evaluable data.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to approximately 36 months

Adverse event reporting additional description:

The Safety set consisted of data from all participants in the ITT set who received at least 1 dose of rivoceranib or placebo. In the Safety set, participants were included in the group based on the treatment that was received. Safety data was analyzed by the Safety set which includes participants who were alive and on treatment or in OS follow-up.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 October 2016	Protocol version under which patient enrollment to begin. Updated based on FDA, CHMP/EMA and PMDA comments and advice to adjust inclusion/exclusion and study evaluations and to clarify and require study activity that address these comments.
03 February 2017	Protocol version to clarify and make slight modifications to inclusion/exclusion criteria. Updated to include Japan specific PMDA requirements to global protocol version and to add more clear parameters for patients to qualify and consent to continued study treatment after disease progression.
07 February 2018	Change of inclusion criteria to allow for later line study treatment in some study regions where recent approval of therapy or standardization of therapy in later line has occurred. This is to maintain the target study population to be subjects who failed approved standard therapies.
16 November 2018	Created open-label extension period for patients taking apatinib after unblinding study results during final analysis. Extended trial period estimation. Clarified ECG data collection. Integrated previous country specific protocol versions.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
