

Clinical trial results:

A phase III, international, multicenter, randomized and openlabel study to evaluate the efficacy on LDLc and blood pressure reduction and safety of Trinomia® versus usual care in patients with high cardiovascular risk without previous cardiovascular event. The VULCANO trial.

Summary

EudraCT number	2016-004015-13
Trial protocol	ES PT
Global end of trial date	11 December 2019

Results information

Result version number	v1 (current)
This version publication date	02 December 2021
First version publication date	02 December 2021

Trial information

Trial identification

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 December 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	11 December 2019
Global end of trial reached?	Yes
Global end of trial date	11 December 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine, in patients at high or very high cardiovascular risk with no previous event, whether treatment with Trinomia® after a period of 16 weeks is at least non-inferior to the usual treatment alone, in terms of SBP (systolic blood pressure) and c-LDL plasma levels.

Protection of trial subjects:

The information disclosed and obtained during this study was considered confidential and treated as such at all times. The patients included in the study were identified only by a numerical code so that no personal data could be identified the patient collected in the database of the study sponsor. The sponsor, therefore, worked with dissociated data.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 June 2017
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	4 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 445
Country: Number of subjects enrolled	Portugal: 20
Country: Number of subjects enrolled	Mexico: 55
Worldwide total number of subjects	520
EEA total number of subjects	465

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	235
From 65 to 84 years	282
85 years and over	3

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

At least the minimum data necessary to confirm the selection criteria (AST/ALT, glomerular filtration, albuminuria and/or proteinuria), and and primary/secondary objectives (LDLc, total cholesterol, HDLc and triglycerides) had to be available in a blood test conducted within the previous 4 weeks.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Trinomia

Arm description:

Trinomia: acetylsalicylic acid 100 mg, atorvastatin (20 mg or 40 mg) and ramipril (2.5 mg, 5 mg or 10 mg) administered orally once a day.

Arm type	Experimental
Investigational medicinal product name	Trinomia
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

The polypill (acetylsalicylic acid 100 mg, atorvastatin 20 or 40mg and ramipril 2.5, 5 or 10 mg) was administered orally as a single capsule per day

Arm title	Control
------------------	---------

Arm description:

The usual treatment that was being prescribed by the patients' doctors, including the different separate drugs that the patients were already receiving before their inclusion in the study.

Arm type	Active comparator
Investigational medicinal product name	Control treatment
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Buccal tablet
Routes of administration	Oral use

Dosage and administration details:

Patients assigned to control group continued receiving the usual treatment they were already receiving prior to inclusion in the study, maintaining the time of administration of the medication.

Number of subjects in period 1^[1]	Trinomia	Control
Started	247	245
Completed	223	236
Not completed	24	9
Consent withdrawn by subject	-	1
Screening failure	-	1
Adverse event, non-fatal	16	3
MG/D	1	-
Error in conversion of baseline medication	1	-
Modification in antihypertensive treatment	1	-
The patient abandons treatment	1	-
Non-compliance of the study procedures	-	1
Change of treatment	1	-
Lost to follow-up	-	3
Protocol deviation	3	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: In this study, the ITT data set was the population for the analysis of baseline characteristics, that is, all subjects who received at least one dose of the study treatment after randomisation (n=492). That is why the number of subjects reported to be in the baseline population does not coincide with the worldwide number enrolled in the trial.
