EU Clinical Trials Register

Clinical trial results:

A Randomized, Double-Blind, Placebo-Controlled, Parallel Group, Multicenter Study to Evaluate the Efficacy and Safety of Bempedoic Acid (ETC-1002) 180 mg/day as Add-on to Ezetimibe Therapy in Patients with Elevated LDL-C on Low Dose or Less than Low Dose Statins

Summary

EudraCT number	2016-004084-39
Trial protocol	HU GB DE CZ
Global end of trial date	11 January 2018

Results information

Result version number	v1 (current)
This version publication date	20 March 2019
First version publication date	20 March 2019

Trial information

Trial identification

Sponsor protocol code	1002-048

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03001076
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 February 2018
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	11 January 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the 12-week efficacy of bempedoic acid 180 mg/day versus placebo in decreasing low-density lipoprotein cholesterol (LDL-C) when added to ezetimibe therapy in participants with elevated LDL-C.

Protection of trial subjects:

The trial was designed, conducted, and monitored in accordance with sponsor procedures, which comply with the ethical principles of Good Clinical Practice (GCP) as required by the major regulatory authorities, and in accordance with the Declaration of Helsinki.

Background therapy:

All participants received study supplied ezetimibe 10 mg/day as background therapy throughout the study. Participants on low or very low-dose statin at screening could continue statin therapy throughout the study provided that the dose was stable (≥4 weeks) and well tolerated. Low dose statin therapy was defined as an average daily dose of rosuvastatin 5 mg, atorvastatin 10 mg, simvastatin 10 mg, lovastatin 20 mg, pravastatin 40 mg, fluvastatin 40 mg, or pitavastatin 2 mg. Very low-dose statin therapy was defined as an average daily dose of rosuvastatin <5 mg, atorvastatin <10 mg, simvastatin <10 mg, lovastatin <20 mg, pravastatin <40 mg, fluvastatin <40 mg, or pitavastatin <2 mg. Participants were instructed to continue taking their lipid-modifying therapy (LMT) throughout the study. PCSK9 inhibitors were not allowed during the study period. Other LMTs were to remain stable for at least 4 weeks prior to screening; fibrates (with the exception of gemfibrozil which was exclusionary in participants aking a statin) were to remain stable for at least 6 weeks prior to screening.

Evidence for comparator: -

Actual start date of recruitment	29 November 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 17
Country: Number of subjects enrolled	United States: 203
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	Czech Republic: 22
Country: Number of subjects enrolled	Germany: 17
Country: Number of subjects enrolled	Hungary: 7
Worldwide total number of subjects	269
EEA total number of subjects	49

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	122
From 65 to 84 years	143
85 years and over	4

Subject disposition

Recruitment

Recruitment details:

Out of the 269 participants who were randomized to the double-blind treatment period, 181 participants were randomized to bempedoic acid and 88 participants to placebo. One participant in the placebo group was randomized but never started treatment.

Pre-assignment

Screening details:

The study consisted of an approximate 1-week screening period, a 4-week single-blind placebo and ezetimibe run-in period, and a 12-week double-blind treatment period.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

The Sponsor, all clinical site personnel (investigator, pharmacist, etc.), and other vendor personnel were blinded to the treatment group for each participant. Participants were also blinded to the treatment they received. Bempedoic acid and placebo had identical physical appearance and packaging. Blinding of treatment was maintained for all participants unless, in the opinion of the investigator, the safety of the participant was at risk.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received placebo tablet, once-daily by mouth and ezetimibe 10 mg capsules, once-daily by mouth for 4 weeks prior to the 12-week treatment period. During the treatment period, participants received placebo tablet, once-daily by mouth and ezetimibe 10 mg capsules, once-daily by mouth for 12 weeks.

Arm type	Placebo
Investigational medicinal product name	Ezetimibe
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received ezetimibe 10 mg capsule, once-daily by mouth for 4 weeks during the run-in period and 12 weeks during the treatment period.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received placebo tablet, once-daily by mouth for 4 weeks during the run-in period and 12 weeks during the treatment period.

Arm title	Bempedoic Acid

Arm description:

Participants received placebo tablet, once-daily by mouth and ezetimibe 10 mg capsules, once-daily by mouth for 4 weeks prior to the 12-week treatment period. During the treatment period, participants received bempedoic acid 180 mg tablet, once-daily by mouth and ezetimibe 10 mg capsules, once-daily

by mouth for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received placebo tablet, once-daily by mouth, with or without food for 4 weeks during the run-in period.

Investigational medicinal product name	Bempedoic acid
Investigational medicinal product code	ETC-1002
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received bempedoic acid 180 mg tablet, once-daily by mouth, with or without food for 12 weeks during the treatment period.

Investigational medicinal product name	Ezetimibe
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received ezetimibe 10 mg capsule, once-daily by mouth for 4 weeks during the run-in period and 12 weeks during the treatment period.

Number of subjects in period 1	Placebo	Bempedoic Acid

Concomitant lipid-modifying therapy medications			

Concomitant medications were defined as medications that started prior to, on or after the first dose of double-blind IMP and started no later than 30 days following end of double-blind IMP, and ended on or after the date of first dose of double-blind IMP or were ongoing at the end of the study. Other LMT included fish oil, eicosapentaenoic acid ethyl ester, omega-3 fatty acids, salmon oil, and sitosterol. Participants received ezetimibe 10 mg/day as background therapy throughout the study. Participants who took at least one concomitant LMT have been reported.

Units: Subjects			
Statins	25	59	84
Fibrates	3	7	10
Nicotinic acid and derivatives	4	3	7
Bile acid sequestrants	1	1	2
Other lipid-modifying therapies	8	19	27
No concomitant lipid-modifying therapies	47	92	139

Concomitant illness: Cardiac disorder			

Concomitant illness was defined as the present condition that started prior to the date of randomization and was ongoing at the time of randomization.

Statistical analyses

Statistical analysis title	Difference [BA - placebo] in LS mean

Statistical analysis description:

The analysis compared the percent change from baseline between treatment groups using a two-sided test at the 0.05 level of significance and a confidence interval of 95%. Least square (LS) mean, 95% CI, and P-value was based on an ANCOVA model with percent change from baseline as the dependent variable, treatment as a fixed effects and baseline as a covariate. The missing parameter at Week 12 was imputed using a multiple imputation method taking into account adherence to treatment.

Statistical analyses

Statistical analysis title	Difference [BA - placebo] in LS mean
Statistical analysis description:	

The analysis compared the percent change from baseline between treatment groups using a two-sided test at the 0.05 level of significance and a confidence interval of 95%. LS mean, 95% CI, and P-value was based on an ANCOVA model with percent change from baseline as the dependent variable, treatment as a fixed effects and baseline as a covariate. Observed data was used for the analysis, no imputation for the missing data was performed.

Comparison groups	Placebo v Bempedoic Acid
Number of subjects included in analysis	269
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.002
Method	ANCOVA
Parameter estimate	Difference in LS mean
Point estimate	-5.89
Confidence interval	
level	95 %
sides	2-sided
lower limit	-9.528
upper limit	-2.25
Variability estimate	Standard error of the mean
Dispersion value	1.845

Secondary: Percentage of Participants With Treatment-emergent Adverse Events (TEAEs)

End point title	Percentage of Participants With Treatment-emergent Adverse Events (TEAEs)
End point description:	

TEAEs, defined as an adverse events (AEs) that began or worsened in severity after the first dose of double-blind study drug and prior to the last dose of double-blind study drug + 30 days, were collected and reported.

End point type	Secondary
End point timeframe:	

Up to approximately 16 weeks

End point values	Placebo	Bempedoic Acid		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	87[15]	181[16]		
Units: percentage of participants				
number (not applicable)				
TEAEs	44.8	48.6		
Non-serious TEAEs	20.7	25.4		
Serious TEAEs	3.4	2.8		
Deaths	0	0

Statistical analyses

No statistical analyses for this end point

Other pre-specified: Percent Change From Baseline to Weeks 4 and 8 in LDL-C

End point title	Percent Change From Baseline to Weeks 4 and 8 in LDL-C
End point description:	

Blood samples were drawn after a minimum 10-hour fast (water was allowed) at pre-specified intervals. Samples were collected and analyzed for LDL-C. Baseline was defined as the mean of the LDL-C values from the last two non-missing values on or prior to Day 1. Percent change from baseline was calculated as: [(LDL-C value at Week 4 or 8 minus Baseline value) divided by (Baseline Value)] multiplied by 100.

End point type	Other pre-specified
End point timeframe:	

Week 4 and Week 8

End point values	Placebo	Bempedoic Acid		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	88[17]	181[18]

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 February 2017	Protocol Amendment 2, dated 10 February 2017, included the following key changes: • Changed protocol title to more accurately reflect the study population based on guidance from the Food and Drug Administration (FDA) • Updated the bempedoic acid mechanism of action • Revised various inclusion criterion and exclusion criterion • Excluded use of cholesteryl ester transfer protein inhibitor (CETP) inhibitors • Changed exclusion time period for mipomersen to 6 months • Removed the allowance to rescreen if low-density lipoprotein cholesterol (LDL-C) criteria at screening visit 1 (S1) were not met • Extended screening an additional 4 weeks if needed to adjust background therapy • Removed collection of pharmacokinetic (PK) at Day 0; specified collection of PK samples prior to Investigational medicinal product (IMP) dosing • Added requirement to Visit S3 (Week -1) that LDL-C ≥70 milligrams per deciliter (mg/dL) • Added chemistry panel and creatine kinase (CK) to Visit S3 (Week -1) given inclusion of ezetimibe naive participants • Removed optional genetic sampling • Removed instructions to reserve samples • Corrected windowing of allowable and prohibited medications to be consistent between entry criteria and protocol body • Removed lipids other than LDL-C as a specified tertiary endpoint • Removed manufacturing contact details (provided in pharmacy manual) • Added text on the administration of study-supplied ezetimibe, including assessment of relationship of adverse events (AEs) to both IMP and ezetimibe • Changed monitoring of CK for asymptomatic participants per FDA request • Revised safety endpoints • Revised statistical sections to clarify level of significance, standard deviation, methods for imputation of missing data, and application of analysis of covariance (ANCOVA) model for primary and secondary endpoints • Made administrative changes made throughout protocol where required to correct inconsistencies, add clarification, or correct errors

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

 None reported
