

## Clinical trial results:

**Evaluation of the safety and efficacy of the treatment of scars and cutis laxa syndrome with the use of autologous (fresh and stored) stem cells isolated from adipose tissue within the project: 'The therapeutic potential of mesenchymal stem cells tested in clinical trials and in vitro - a justification for characterized cells storage'.**

### Summary

EudraCT number	2016-004110-10
Trial protocol	PL
Global end of trial date	18 January 2020

### Results information

Result version number	v1 (current)
This version publication date	24 June 2021
First version publication date	24 June 2021
Summary attachment (see zip file)	SUMMARY_2ABC_clinical_trial (streszczenie_EMA (002).pdf)

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 January 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 January 2020
Was the trial ended prematurely?	No

Notes:

---

## General information about the trial

Main objective of the trial:

The aim of the study was to demonstrate the safety and efficacy of autologous adipose tissue-derived stem cells - fresh (SVF fraction) or cryopreserved (ADSC fraction), delivered via topical injection in patients with scarring or cutis laxa of the dorsal surface of the hands.

Protection of trial subjects:

The study protocol and all changes to this document and patient information card have been reviewed and approved by the appropriate independent ethics committees. The study was conducted in accordance with the current version of the declaration of Helsinki. The study was conducted in accordance with the Good Clinical Practice (GCP) guidelines of the International Conference on Harmonization (ICH). Before the study, all patients gave written informed consent to participate in the study. The study procedures (objectives, methodology, potential risks, anticipated benefits) were detailed in the patient information card and explained to each patient by the investigator.

In order to protect patients, the following medications were used:

Midazolam - premedication, relieving tension before surgery

EMLA (Lidocaine + Prilocaine) - analgesic

Tumescent fluid - infiltration anesthesia

Augmentin - infection prevention

Low molecular weight heparin - antithrombotic prevention

Background therapy:

Before the mesotherapy treatment/placebo administration, all patients underwent a non-ablative fractional laser treatment aimed at stimulating collagen renewal, which is used in the treatment of scars and keloids, smoothing the skin surface and improving skin tone. The laser setting parameters in all patients were the same, in low standard ranges recommended for a given area and type of changes/indications in the patient.

Before liposuction, anticoagulant treatment with low molecular weight heparin in a standard dose, oral antibiotic (Augmentin 1.0 g) or intravenous (Tarcefandol 1.0 g - second generation cephalosporin) and premedication (Midazolam 7.5-15 mg) were used. Operation fields were prepared as for a surgical procedure, i.e. washed with a disinfectant.

Before the laser therapy and mesotherapy, Emla cream with lignocaine and 5% prilocaine or prescription cream with 23% lignocaine was used (40-60 min). They were washed off before the procedure.

Allowed emergency treatment included:

- causal treatment of emergency medical conditions directly life-threatening,
- systemic antibiotic therapy in the case of bacterial infections up to 10 days,
- topical treatment with antiseptics (octenisept, boric acid, chlorhexidine).

Evidence for comparator:

Studied therapy was compared to placebo.

Actual start date of recruitment	31 January 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

---

## Population of trial subjects

---

### Subjects enrolled per country

---

Country: Number of subjects enrolled	Poland: 112
Worldwide total number of subjects	112
EEA total number of subjects	112

Notes:

---

### Subjects enrolled per age group

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	99
From 65 to 84 years	13
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Patient recruitment to the clinical trial started on 31.01.2018. The first patient was enrolled to the study on 31.01.2018 and the last patient on 23.05.2019. Patients were recruited in two research centers: Timeless Chirurgia Plastyczna spółka z o.o., Warsaw, Poland and Melitus Sp. z o.o., Warsaw, Poland.

### Pre-assignment

Screening details:

The number of patients planned for inclusion was 100. 127 patients were recruited (signed consent to participate in the study) in two clinical sites: 72 at Site 1 and 55 at Site 2. 15 patients did not pass the screening. 112 patients were randomized - 92 to arm A (active treatment) and 20 to arm B (placebo).

### Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Arm A

Arm description:

In arm A patients with cutis laxa or scarring received a dose of stem cell suspension isolated from lipoaspirate and then injected into the patient's skin. Patients received treatment in two schemes. In Scheme I (SVF) patients received a fresh fraction of cells isolated from adipose tissue (not subjected to in vitro culture). This is the so-called stromal vascular fraction. Some SVF cells were frozen and some were prepared in cell culture for the second and subsequent applications in the patient. In Scheme II (ADSC) the first application of the cultured cell suspension took place 6-12 days after the liposuction/lipoaspiration procedure. Some cells were cryopreserved and after thawing prepared in cell culture for the second and subsequent applications in the patient.

Arm type	Experimental
Investigational medicinal product name	Adipose tissue-derived mesenchymal stem cells
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A dose of stem cell suspension isolated from lipoaspirate and then injected into the patient's skin

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

In arm B, placebo was administered to a hand or two scars or a single scar. The placebo was a 0.9% NaCl (saline) solution injected using the same procedure as for the stem cell suspension.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

The placebo was a 0.9% NaCl (saline) solution injected using the same procedure as for the stem cell suspension.

<b>Number of subjects in period 1</b>	Arm A	Placebo
Started	92	20
Completed	74	20
Not completed	18	0
Consent withdrawn by subject	12	-
preparation of product was impossible	4	-
Adverse event, non-fatal	2	-

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Assessment of adverse events was conducted from day 0 to the end of clinical trial (week 24-27).

Adverse event reporting additional description:

Assessments were performed on day 0, day 0 +1 day, day 6-12, week 2, week 4-5, week 6, week 8-9, week 10, week 24-27 and on early termination of the study

Assessment type	Systematic

### Reporting groups

Reporting group title	Overall
-----------------------	---------

Reporting group description: -

Serious adverse events	Overall		
Total subjects affected by serious adverse events			
subjects affected / exposed	1 / 94 (1.06%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		
General disorders and administration site conditions			
Blood pressure increased	Additional description: Patient 2ABC01016 experienced SAE that was hospitalization for increased blood pressure. Patient recovered completely. In the investigator's opinion, it was not related to the test product, but administration of the product was discontinued.		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		

Frequency threshold for reporting non-serious adverse events: 0 %

Non-serious adverse events	Overall		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	55 / 94 (58.51%)		
General disorders and administration site conditions			
Swelling	Additional description: Swelling after mesotherapy		
subjects affected / exposed	4 / 94 (4.26%)		
occurrences (all)	7		
Erythema	Additional description: Skin erythema after mesotherapy		

subjects affected / exposed	7 / 94 (7.45%)		
occurrences (all)	9		
Dry skin	Additional description: Hand skin roughness or dryness after mesotherapy		
subjects affected / exposed	2 / 94 (2.13%)		
occurrences (all)	5		
Skin injury	Additional description: Bruising hand skin at the application site		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		
Skin irritation	Additional description: Itching of the hand skin at the application site		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		
Skin sensitisation	Additional description: Paresthesia after liposuction		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	2		
Pain	Additional description: Pain associated with liposuction		
subjects affected / exposed	13 / 94 (13.83%)		
occurrences (all)	14		
Blood pressure increased	Additional description: Increased blood pressure		
subjects affected / exposed	4 / 94 (4.26%)		
occurrences (all)	4		
Abdominal pain	Additional description: Stabbing pain in the lower left abdominal quadrant		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		
Throat irritation	Additional description: Sore throat		
subjects affected / exposed	4 / 94 (4.26%)		
occurrences (all)	4		
Rhinitis	Additional description: Watery rhinitis		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		
Headache	Additional description: Headache		
subjects affected / exposed	13 / 94 (13.83%)		
occurrences (all)	25		
Tremor	Additional description: Symptoms of tremor combined with an episode of increased blood pressure (160/98)		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		

Pharyngitis subjects affected / exposed occurrences (all)	Additional description: Acute pharyngitis		
	1 / 94 (1.06%)		
	1		
Immune system disorders  Allergy to plants subjects affected / exposed occurrences (all)  Allergic respiratory disease subjects affected / exposed occurrences (all)  Eye allergy subjects affected / exposed occurrences (all)	Additional description: Birch pollen allergy		
	2 / 94 (2.13%)		
	2		
	Additional description: Respiratory allergy		
	5 / 94 (5.32%)		
	6		
	Additional description: Itching and redness of the conjunctiva of both eyes of an allergic nature		
	1 / 94 (1.06%)		
Reproductive system and breast disorders  Menstruation irregular subjects affected / exposed occurrences (all)  Menopausal symptoms subjects affected / exposed occurrences (all)			
	Additional description: Occurrence of menstrual bleeding after an 8-month break		
	1 / 94 (1.06%)		
	1		
	Additional description: Perimenopausal symptoms		
Respiratory, thoracic and mediastinal disorders  Respiratory tract infection subjects affected / exposed occurrences (all)  Sinusitis subjects affected / exposed occurrences (all)  Cough subjects affected / exposed occurrences (all)  Asthma subjects affected / exposed occurrences (all)			
	Additional description: Infection of the upper or lower respiratory tract, common cold		
	16 / 94 (17.02%)		
	18		
	Additional description: Inflammation of the paranasal sinuses		
	1 / 94 (1.06%)		
	1		
	Additional description: Cough		
	1 / 94 (1.06%)		
	1		
	Additional description: Asthmatic symptoms (exacerbation of periodically occurring dyspnoea in the spring)		
	1 / 94 (1.06%)		
	1		
Nervous system disorders			

Migraine subjects affected / exposed occurrences (all)	Additional description: Migraine headache		
	2 / 94 (2.13%) 2		
Blood and lymphatic system disorders Oedema peripheral subjects affected / exposed occurrences (all)  Iron deficiency subjects affected / exposed occurrences (all)	Additional description: Painless swelling of lower legs		
	1 / 94 (1.06%) 1		
	Additional description: Low serum iron levels (up to 55 mcg/ml)		
	1 / 94 (1.06%) 1		
Ear and labyrinth disorders Otitis media acute subjects affected / exposed occurrences (all)  Ear pain subjects affected / exposed occurrences (all)	Additional description: Acute otitis media		
	1 / 94 (1.06%) 1		
	Additional description: Ear pain		
	1 / 94 (1.06%) 1		
Eye disorders Lacrimation increased subjects affected / exposed occurrences (all)  Conjunctivitis subjects affected / exposed occurrences (all)	Additional description: Lacrimation accompanied by a runny nose		
	1 / 94 (1.06%) 1		
	Additional description: Conjunctivitis of both eyes		
	2 / 94 (2.13%) 2		
Gastrointestinal disorders Gastric pH increased subjects affected / exposed occurrences (all)  Diarrhoea subjects affected / exposed occurrences (all)  Vomiting subjects affected / exposed occurrences (all)	Additional description: Gastric hyperacidity		
	1 / 94 (1.06%) 1		
	Additional description: Diarrhoea		
	2 / 94 (2.13%) 2		
Skin and subcutaneous tissue disorders Vitiligo	Additional description: Vitiligo in the place of the scar on the hand after laser treatment		

subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		
Inflammation	Additional description: Nonspecific inflammation of the soft tissues of the hands with massive swelling; inflammatory lump on the forearm		
subjects affected / exposed	2 / 94 (2.13%)		
occurrences (all)	4		
Scar pain	Additional description: Pain in the scar area		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		
Haemorrhage subcutaneous	Additional description: Subcutaneous hemorrhage under the eye		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		
Urticaria	Additional description: Acute urticaria		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		
Skin reaction	Additional description: Skin allergy		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		
Endocrine disorders			
Hypothyroidism	Additional description: Hypothyroidism		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		
Musculoskeletal and connective tissue disorders			
Ankle deformity	Additional description: Right ankle sprain		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		
Back pain	Additional description: Spine pain		
subjects affected / exposed	3 / 94 (3.19%)		
occurrences (all)	3		
Tooth fracture	Additional description: Fracture in the root of the lower left IV tooth		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		
Pain in extremity	Additional description: Lower limb pain in the area of the left shin; pain in the left shoulder area; hip pain		
subjects affected / exposed	3 / 94 (3.19%)		
occurrences (all)	3		
Finger deformity	Additional description: Injury of fourth finger of the right hand		

subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		
Formication	Additional description: Formication and numbness of both hands radiating to the elbows		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	2		
Infections and infestations			
Viral infection	Additional description: Shingles		
subjects affected / exposed	2 / 94 (2.13%)		
occurrences (all)	2		
Oral herpes	Additional description: Oral herpes		
subjects affected / exposed	3 / 94 (3.19%)		
occurrences (all)	4		
Bite	Additional description: Tick bite		
subjects affected / exposed	1 / 94 (1.06%)		
occurrences (all)	1		

## **More information**

### **Substantial protocol amendments (globally)**

Were there any global substantial amendments to the protocol? No

---

### **Interruptions (globally)**

Were there any global interruptions to the trial? No

### **Limitations and caveats**

None reported
