

## Clinical trial results:

**A randomized, subject- and investigator-blinded, placebo-controlled study to assess the safety, pharmacokinetics and efficacy of intravenous bimagrumab in overweight and obese patients with type 2 diabetes**

### Summary

EudraCT number	2016-004124-26
Trial protocol	GB
Global end of trial date	08 May 2019

### Results information

Result version number	v1 (current)
This version publication date	23 May 2020
First version publication date	23 May 2020

### Trial information

#### Trial identification

Sponsor protocol code	CBYM338X2211
-----------------------	--------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03005288
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	Novartis Pharma AG
Sponsor organisation address	CH-4002, Basel, Switzerland,
Public contact	Clinical Disclosure Office, Novartis Pharma AG, 41 613241111, Novartis.email@novartis.com
Scientific contact	Clinical Disclosure Office, Novartis Pharma AG, 41 613241111, Novartis.email@novartis.com

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 May 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 May 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the trial was to evaluate the treatment effect of bimagrumab on total body fat mass.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 February 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	United States: 74
Worldwide total number of subjects	78
EEA total number of subjects	4

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	54
From 65 to 84 years	24
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was completed as planned.

### Pre-assignment

Screening details:

Participants were randomized to the study at 1:1 ratio to receive BYM338 10 mg/kg or placebo.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	BYM338 10 mg/kg

Arm description:

intravenous infusion every four weeks

Arm type	Experimental
Investigational medicinal product name	Bimagrumab
Investigational medicinal product code	BYM338
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Bimagrumab 10 mg/kg up to maximum 1200 mg, every 4 weeks (12 doses)

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

intravenous infusion every four weeks

Arm type	Placebo
Investigational medicinal product name	N/A
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Placebo, every 4 weeks (12 doses)

<b>Number of subjects in period 1</b>	<b>BYM338 10 mg/kg</b>	<b>Placebo</b>
Started	39	39
Safety analysis set	37	38
Pharmacodynamics (PD) analysis set	36	36
Completed	27	31
Not completed	12	8
Consent withdrawn by subject	7	5
Physician decision	-	1
Adverse event, non-fatal	5	-
Protocol deviation	-	1
Lost to follow-up	-	1

**Secondary: Change from baseline in HbA1c at week 24 and 48**

End point title	Change from baseline in HbA1c at week 24 and 48
End point description: HbA1c reflects average glucose concentrations over the past 3 months and therefore provides a useful index of the glycemic control of bimagrumab over that time period. It is a standard endpoint used to assess the glycemic efficacy of any anti-diabetic medication. HbA1c is a key glycemic parameter which correlates with reduction of risk of diabetic complications.	
End point type	Secondary
End point timeframe: Baseline, Week 24, Week 48

## Secondary: Change from baseline in lean body mass (LBM) measured by DXA

End point title	Change from baseline in lean body mass (LBM) measured by DXA
-----------------	--

**End point description:**

Lean body mass (LBM) is a part of body composition defined as the difference between total body weight and body fat weight. This means that it counts the mass of all organs except body fat, including bones, muscles, blood, skin, and everything else.

Dual energy X-ray absorptiometry (DXA) was used to assess changes in body composition, including total fat and lean body mass (FM and LBM) and appendicular skeletal fat and muscle mass (aFM and aLBM). DXA instruments had a source that generated x-rays split into two energies which measured bone mineral mass and soft tissue from which fat and fat-free mass (or lean body mass) were estimated.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events were collected throughout the study for 56 weeks which includes the treatment period of 48 weeks and the follow-up period of 8 weeks.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 March 2017	Amendment 01: The purposes of this amendment were to: 1) align the study design with contemporary techniques for assessing dietary intake, physical activity, and insulin resistance; 2) integrate new safety data from recently completed bimagrumab studies; and 3) clarify the dietary intervention and overall assessment components of the study. At the time of this protocol amendment, no subjects were enrolled in the clinical study.
26 October 2017	Amendment 02: The primary purpose of this amendment was to present a new safety observation (transient elevations in lipase and amylase) in the bimagrumab development program and the resultant modifications to this protocol, to clarify language about laboratory evaluations required during the screening period, and to update eligibility criteria.
23 November 2017	Amendment 03: The primary purpose of this amendment was to include time points for the additional pancreatic enzyme safety monitoring that were inadvertently omitted from protocol amendment 02 and to clarify language related to treatment of adverse events and laboratory values.
12 March 2018	Amendment 04: The primary purpose of this amendment was to update the language related to the planned interim analyses and total sample size. More specifically: Interim Analysis #1 was removed as it was no longer needed for decision making. The assumed dropout rate was increased to 30% to reflect actual rate observed in the study, which increased the sample size to approximately 68 recruited. Additionally, this study began review by the program-level external Data Monitoring Committee (DMC).
17 January 2019	Amendment 05: The primary purpose of this amendment was to add an additional MRI at week 48 for subjects who had provided consent to this optional scan. Based on the results from the IA conducted after more than 50% of subjects had completed 24 weeks of treatment, this additional MRI scan was added to explore the effect of bimagrumab on MRI efficacy endpoints after 12 monthly doses.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
