

## Clinical trial results:

### A Phase IIa, Open-Label, Multiple Ascending Dose Study to Assess the Safety, Tolerability, Pharmacokinetics, Pharmacodynamics, and Exploratory Efficacy of Vamorolone in Boys with Duchenne Muscular Dystrophy (DMD)

#### Summary

EudraCT number	2016-004262-26
Trial protocol	SE GB
Global end of trial date	01 May 2018

#### Results information

Result version number	v1 (current)
This version publication date	19 October 2018
First version publication date	19 October 2018

#### Trial information

##### Trial identification

Sponsor protocol code	VBP15-002
-----------------------	-----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02760264
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	ReveraGen BioPharma Inc.
Sponsor organisation address	155 Gibbs Street Suite 433, Rockville, United States, 20850
Public contact	Vice President, Operations, ReveraGen BioPharma Inc., +1 215 680 8286, jesse.damsker@reveragen.com
Scientific contact	Vice President, Operations, ReveraGen BioPharma Inc., +1 215 680 8286, jesse.damsker@reveragen.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001794-PIP02-16
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 May 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	01 May 2018
Global end of trial reached?	Yes
Global end of trial date	01 May 2018
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the safety and tolerability of multiple ascending oral doses of vamorolone in ambulant boys ages 4-< 7 years with DMD.

Protection of trial subjects:

This study was conducted in accordance with the principles of the 18th World Medical Assembly (Helsinki, June 1964), and amendments of the 29th (Tokyo, 1975), 35th (Venice, 1983), 41st (Hong Kong, 1989), 48th (Somerset West, 1996), 52nd (Edinburgh, 2000), 53rd (Washington, 2002), 55th (Tokyo, 2004), 59th (Seoul, 2008), and 64th (Fortaleza, 2013) World Medical Assemblies.

Further, the trial was conducted in accordance with:

-International Conference on Harmonisation (ICH) E6 Guideline for Good Clinical Practice (GCP)

-The United States (US) Food and Drug Administration (FDA) Code of Federal Regulations, Title 21 CFR Part 312 - IND Application, Part 50 - Protection of Human Patients with particular focus in SubPart D, and/or Part 56 - Institutional Review Boards

-US Health Insurance Portability and Accountability Act of 1996 (HIPAA)

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 July 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy, Ethical reason
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 4
Country: Number of subjects enrolled	United Kingdom: 6
Country: Number of subjects enrolled	United States: 20
Country: Number of subjects enrolled	Australia: 6
Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	Israel: 5
Worldwide total number of subjects	48
EEA total number of subjects	10

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	48
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Subjects were screened based on inclusion and exclusion criteria specified in the VBP15-002 protocol

### Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not blinded

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Dose level group 1
------------------	--------------------

Arm description:

0.25 mg/kg/day for 14 days

Arm type	Experimental
Investigational medicinal product name	Vamorolone 4% oral suspension
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Study drug was administered by mouth using a volumetric syringe. Following administration of the dose of study drug, the syringe was filled once with water and the water was administered by mouth using the volumetric syringe. The subject then drank approximately 50 mL (approximately 2 ounces) of water to ensure the full dose had been ingested.

<b>Arm title</b>	Dose level group 2
------------------	--------------------

Arm description:

0.75 mg/kg/day for 14 days

Arm type	Experimental
Investigational medicinal product name	Vamorolone 4% oral suspension
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Study drug was administered by mouth using a volumetric syringe. Following administration of the dose of study drug, the syringe was filled once with water and the water was administered by mouth using the volumetric syringe. The subject then drank approximately 50 mL (approximately 2 ounces) of water to ensure the full dose had been ingested.

<b>Arm title</b>	Dose level group 3
------------------	--------------------

Arm description:

2.0 mg/kg/day for 14 days

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Vamorolone 4% oral suspension
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Study drug was administered by mouth using a volumetric syringe. Following administration of the dose of study drug, the syringe was filled once with water and the water was administered by mouth using the volumetric syringe. The subject then drank approximately 50 mL (approximately 2 ounces) of water to ensure the full dose had been ingested.

<b>Arm title</b>	Dose level group 4
------------------	--------------------

Arm description:

6.0 mg/kg/day for 14 days

Arm type	Experimental
Investigational medicinal product name	Vamorolone 4% oral suspension
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Study drug was administered by mouth using a volumetric syringe. Following administration of the dose of study drug, the syringe was filled once with water and the water was administered by mouth using the volumetric syringe. The subject then drank approximately 50 mL (approximately 2 ounces) of water to ensure the full dose had been ingested.

## End points

### End points reporting groups

Reporting group title	Dose level group 1
Reporting group description: 0.25 mg/kg/day for 14 days	
Reporting group title	Dose level group 2
Reporting group description: 0.75 mg/kg/day for 14 days	
Reporting group title	Dose level group 3
Reporting group description: 2.0 mg/kg/day for 14 days	
Reporting group title	Dose level group 4
Reporting group description: 6.0 mg/kg/day for 14 days	

### Primary: Overall Summary of Adverse Events as Assessed by CTCAE Version 4.03

End point title	Overall Summary of Adverse Events as Assessed by CTCAE Version 4.03 <sup>[1]</sup>
-----------------	--

End point description:

Treatment-emergent adverse events (TEAEs) are defined as any adverse event or worsening of an existing conditions after initiation of the investigational product and through the subject's last study visit (study completion or early termination). Serious adverse events were recorded for up to 30 days after the final administration of study drug. Related TEAEs include those considered possibly, probably, and definitely related.

End point type	Primary
----------------	---------

End point timeframe:

Adverse events will be recorded from the date of informed consent and through the time of the subject's last study visit. Serious adverse events will be recorded from the date of informed consent and for up to 30 days after final drug administration.

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Safety analyses will be performed using the Safety Population and were completed using the actual treatment a subject received and will address the primary objective of the study.

Treatment levels were not compared.

## Secondary: Metabolites in Safety Testing (MIST)

End point title	Metabolites in Safety Testing (MIST) <sup>[2]</sup>
-----------------	---

End point description:

A portion of each blood sample collected for PK testing at each of the Week 2 (Day 14) assessment time points will be used for analysis of vamorolone metabolites. The relative exposures of the metabolites observed in human plasma were obtained to determine if any metabolite exceeded the 10% total drug related exposure (TDRE) threshold specified by the FDA and ICH guidance documents.

End point type	Secondary
----------------	-----------

End point timeframe:

Week 2 (Day 14)

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Percent total drug related exposures for each metabolite in each sample were calculated by dividing the average area ratio for each metabolite by the sum of the average area ratios for all metabolites and Vamorolone in that sample.

Treatment levels were not compared.

End point values	Dose level group 3			
Subject group type	Reporting group

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events will be recorded from the date of informed consent and through the time of the subject's last study visit. Serious adverse events will be recorded from the date of informed consent and for up to 30 days after final drug administration.

Adverse event reporting additional description:

The incidence of TEAEs will be summarized by dose level, SOC and preferred term; dose level, SOC, and intensity (CTCAE grade; CTCAE version 4.03); dose level, SOC, and outcome; and dose level, SOC and relationship to study drug.

No serious treatment emergent adverse events

No subjects with all-cause mortality.

Assessment type	Systematic
-----------------	------------
