

Clinical trial results:

A Phase II Open-label, Multicenter Extension Study to Assess the Long-term Safety and Efficacy of Vamorolone in Boys with Duchenne Muscular Dystrophy (DMD)

Summary

EudraCT number	2016-004263-38
Trial protocol	SE GB
Global end of trial date	26 April 2018

Results information

Result version number	v1 (current)
This version publication date	30 March 2019
First version publication date	30 March 2019

Trial information

Trial identification

Sponsor protocol code	VBP15-003

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001794-PIP02-16
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 September 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 April 2018
Global end of trial reached?	Yes
Global end of trial date	26 April 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objectives:

1. To evaluate the long-term safety and tolerability of vamorolone, administered orally at daily doses up to 6.0 mg/kg over a 24-week Treatment Period, in boys ages 4-7 years with DMD;
2. To compare the efficacy, as measured by the Time to Stand Test (TTSTAND), of vamorolone administered orally at daily doses up to 6.0 mg/kg over a 24-week Treatment Period vs. untreated DMD historical controls in boys ages 4-7 years with DMD; and
3. To compare the safety, as measured by body mass index (BMI) z-score, of vamorolone administered orally at daily doses up to 6.0 mg/kg over a 24-week Treatment Period vs. prednisone-treated historical controls in boys ages 4-7 years with DMD.

Protection of trial subjects:

The trial will be conducted in accordance with the International Conference on Harmonisation E6 Guideline for Good Clinical Practice; The United States FDA Code of Federal Regulations, Title 21 CFR Part 312, and the US Health Insurance Portability and Accountability Act of 1996. The Parent/guardian of each participant must consent in writing for participant to be enrolled.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 July 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 20
Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	Israel: 5
Country: Number of subjects enrolled	United Kingdom: 7
Country: Number of subjects enrolled	Sweden: 4
Country: Number of subjects enrolled	Australia: 5
Worldwide total number of subjects	48
EEA total number of subjects	11

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	48
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Only those who have participated in the VBP13-003 trial are able to participate in the 003 trial.

Pre-assignment

Screening details:

Subject has previously completed study VBP15-002 up to and including the Week 4 Follow-up assessments within 8 weeks prior to enrollment.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Dose level group 1
------------------	--------------------

Arm description:

0.25 mg/kg/day for 24 weeks

Arm type	Experimental
Investigational medicinal product name	Vamorolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Vamorolone 4% oral suspension

Arm title	Dose level Group 2
------------------	--------------------

Arm description:

0.75 mg/kg/day for 24 weeks

Arm type	Experimental
Investigational medicinal product name	Vamorolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Vamorolone 4% oral suspension

Arm title	Dose level Group 3
------------------	--------------------

Arm description:

2.0 mg/kg/day for 24 weeks

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Vamorolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Vamorolone 4% suspension

Arm title	Dose level Group 4
------------------	--------------------

Arm description:

6.0 mg/kg/day for 24 weeks

Arm type	Experimental
Investigational medicinal product name	Vamorolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Vamorolone 4% oral suspension

Primary: Overall Summary of Adverse Events as Assessed by CTCAE Version 4.03

End point title	Overall Summary of Adverse Events as Assessed by CTCAE Version 4.03 ^[1]
End point description: Treatment-emergent adverse events (TEAEs) are defined as any adverse event or worsening of an existing conditions after initiation of the investigational product and through the subject's last study visit (study completion or early termination). Serious adverse events were recorded for up to 30 days after the final administration of study drug; To evaluate the long-term safety and tolerability of vamorolone, administered orally at daily doses up to 6.0 mg/kg/day over a 24- week Treatment Period, in boys ages 4-7 years with DMD.	
End point type	Primary
End point timeframe: 24 weeks	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Treatment levels were not compared.

Secondary: Serum Pharmacodynamics Biomarkers Measured by Levels of ACTH

End point title	Serum Pharmacodynamics Biomarkers Measured by Levels of ACTH
-----------------	--

End point description:

To investigate the effects of vamorolone, administered orally at daily doses up to 6.0 mg/kg over a 24-week Treatment Period vs. prednisone-treated historical controls, on serum pharmacodynamic (PD) biomarkers of safety (insulin resistance, adrenal axis suppression, and bone turnover). SomaScan aptamer panels testing 1,200 serum proteins were used to discover a candidate set of prednisone-responsive biomarkers, with a subset of these validating in a longitudinal sample set (individual DMD patients pre/post steroid treatment). These PD biomarkers were assigned to a safety panel or efficacy panel based on comparison to normal controls and information concerning the function of each protein.

Secondary: Serum Pharmacodynamics Biomarkers Measured by Levels of Osteocalcin

End point title	Serum Pharmacodynamics Biomarkers Measured by Levels of Osteocalcin
End point description:	
To investigate the effects of vamorolone, administered orally at daily doses up to 6.0 mg/kg over a 24-week Treatment Period vs. prednisone-treated historical controls, on serum pharmacodynamic (PD) biomarkers of safety (insulin resistance, adrenal axis suppression, and bone turnover). SomaScan aptamer panels testing 1,200 serum proteins were used to discover a candidate set of prednisone-responsive biomarkers, with a subset of these validating in a longitudinal sample set (individual DMD patients pre/post steroid treatment). These PD biomarkers were assigned to a safety panel or efficacy panel based on comparison to normal controls and information concerning the function of each protein.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events, including Serious Adverse Events (SAEs), and concomitant medications will be assessed at each study visit and recorded throughout the study starting from Treatment Period Day 1.

Adverse event reporting additional description:

Adverse events will be summarized overall and by dose level, system organ class (SOC) and preferred term (using the Medical Dictionary for Regulatory Activities [MedDRA]); by dose level and relationship to study medication; and by dose level and intensity (CTCAE grade).
