General information about the trial

Main objective of the trial:

To evaluate the safety, tolerability, and efficacy of Azacitidine in combination with Pembrolizumab and Epacadostat in subjects With Advanced Solid Tumors and Previously Treated Stage IIIB or Stage IV Non-Small Cell Lung Cancer and Stage IV Microsatellite-Stable Colorectal Cancer.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 February 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 8 study sites in United States, 2 sites in UK and 1 site in Spain.

Pre-assignment

Screening details:

A total of 70 participants were enrolled in the study. Study enrollment was permanently discontinued on 15-Feb-2019 as a strategic decision. No patients were enrolled in Treatment Group B and Treatment Group C.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Treatment Group A :100mg of INCB24360

Arm description:

In Treatment Group A, subjects will receive the DNMT inhibitor azacitidine in combination with the PD-1 inhibitor pembrolizumab and the IDO1 inhibitor epacadostat at 100mg. Due to early termination of study subjects from dose escalation and dose expansion are combined.

Arm type	Experimental
Investigational medicinal product name	azacitidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion, Infusion
Routes of administration	Subcutaneous use, Intravenous use

Dosage and administration details:

Intravenous Injection

Investigational medicinal product name	Epacadostat

Primary: Part 1 and 2 : Frequency, duration, and severity of adverse events

End point title	Part 1 and 2 : Frequency, duration, and severity of adverse events ^[1]
End point description: A treatment-emergent AE was defined as an event occurring after exposure to at least 1 dose of study drug. A treatment-related AE was defined as an event with a definite, probable, or possible causality to study medication. A serious AE is an event resulting in death, hospitalization, persistent or significant disability/incapacity, or is life threatening, a congenital anomaly/birth defect or requires medical or surgical intervention to prevent 1 of the outcomes above. The intensity of an AE was graded according to the National Cancer Institute common terminology criteria for adverse events (NCI-CTCAE) version 4.03: Grade 1 (Mild); Grade 2 (Moderate); Grade 3 (Severe); Grade 4 (life-threatening).	
End point type	Primary
End point timeframe: Baseline through 42-49 days after end of treatment, estimated up to 27 months (24 months with 100 day FU period).

Criteria in Solid Tumors version 1.1 (RECIST v1.1)

End point title	Part 1 and 2: Objective response rate based on Response Evaluation Criteria in Solid Tumors version 1.1 (RECIST v1.1) ^[2]
-----------------	--

End point description:

ORR was defined as the percentage of participants having a complete response (CR) or partial response (PR) as determined by investigator assessment of radiographic disease per Response Evaluation Criteria in Solid Tumors (RECIST) v1.1. CR is disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm. PR is at least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum of diameters. A participant was considered as an objective responder if the participant had a best overall response of CR or PR.
