

Clinical trial results:

An open-label, randomized, single-center, parallel group study of the effects of artemether-lumefantrine (Coartem®) atovaquone-proguanil (Malarone®) and artesunate-mefloquine on auditory function following the treatment of acute uncomplicated Plasmodium falciparum malaria in patients 12 years of age or older

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 November 2008
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	22 November 2008
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to assess the auditory safety of artemetherlumefantrine after 3 days of treatment in patients with acute, uncomplicated falciparum malaria by testing the null hypothesis that the rate of auditory brainstem pathway abnormalities as assessed by ABR at Day 7) is $\geq 15\%$ in such patients. An "auditory brainstem pathway abnormality" was defined as a greater than 0.30 msec change in Wave III latency from baseline to Day 7

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 May 2007
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Patients were randomized in a 3:1:1 ratio to artemether-lumefantrine, atovaquone-proguanil (Malarone®, GlaxoSmithkline) or artesunate-mefloquine (Plasmodtrim® + Mephaquin®, Mepha).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Artemether-lumefantrine (Coartem)

Arm description:

Artemether-lumefantrine (Coartem) tablets containing 20 mg artemether and 120 mg lumefantrine twice a day for 3 days dosage dependent on body weight.

Arm type	Experimental
Investigational medicinal product name	Artemether-lumefantrine (Coartem)
Investigational medicinal product code	COA566
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Artemether-lumefantrine (Coartem) tablets containing 20 mg artemether and 120 mg lumefantrine twice a day for 3 days, dosage dependent on body weight.

Arm title	Atovaquone-proguanil (Malarone)
------------------	---------------------------------

Arm description:

Atovaquone-proguanil (Malarone) tablets containing 250 mg atovaquone and 100 mg proguanil hydrochloride once daily for 3 days dosage dependent on body weight.

Arm type	Active comparator
Investigational medicinal product name	Atovaquone-proguanil (Malarone)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Atovaquone-proguanil (Malarone) tablets containing 250 mg atovaquone and 100 mg proguanil hydrochloride once daily for 3 days, dosage dependent on body weight.

Arm title	Artesunate-mefloquine
------------------	-----------------------

Arm description:

Artesunate (Plasmodtrim) 50 mg tablet; based on body weight for a dosage of 4 mg/kg/day for 3 days-
mefloquine (Mephaquin) 250 mg tablets; based on body weight for a total dosage of 25 mg/kg once daily on days 2 and 3.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Artesunate-mefloquine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Artesunate-mefloquine tablets containing 50 mg artesunate (Plasmodium) and 250 mg mefloquine (Mephaquin). Artesunate 4 mg/kg/day (for 3 days) and mefloquine 25 mg/kg/day (days 2 and 3) total dose was given once daily dependent upon body weight.

Number of subjects in period 1	Artemether-lumefantrine (Coartem)	Atovaquone-proguanil (Malarone)	Artesunate-mefloquine

Subject analysis set title	Artemether-lumefantrine
Subject analysis set type	Per protocol
Subject analysis set description: Artemether-lumefantrine (Coartem) tablets containing 20 mg artemether and 120 mg lumefantrine twice a day for 3 days dosage dependent on body weight.	

Primary: Percentage of participants with Auditory abnormalities at Day 7 assessed by Auditory Brainstem Response (ABR) Wave III latency changes on Day 7(a type of hearing test)

End point title	Percentage of participants with Auditory abnormalities at Day 7 assessed by Auditory Brainstem Response (ABR) Wave III latency changes on Day 7(a type of hearing test) ^{[1][2]}
End point description: To demonstrate the safety of artemether-lumefantrine after 3 days of treatment in patients with acute, uncomplicated falciparum malaria by testing the null hypothesis that the rate of auditory abnormalities is $\geq 15\%$ in the population treated with artemether-lumefantrine as assessed by ABR at Day 7 following initiation of treatment compared with their baseline values. An "auditory nerve abnormality" is here defined as a greater than 0.30 ms change in Wave III latency from baseline to Day 7. Exact Pearson-Clopper two-sided 95% confidence limits were constructed for all three treatment groups.	
End point type	Primary
End point timeframe: 7 days	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Stat analysis was conducted for one arm artemether-lumefantrine but system does not allow us to report statistical analysis for a single arm. The P Value was <0.0001 .

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The primary objective of the study was to evaluate the effects of artemether-lumefantrine on the auditory system based on ABR and pure-tone threshold findings after treatment in adults and adolescents suffering from acute uncomplicated malaria. Hence, the other two arms are not compared.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 January 2008	The main purpose of this amendment was to clarify the use of primaquine as concomitant medication in this study. The Ministry of Health policy in Colombia stipulates that primaquine is administered to patients with uncomplicated P. falciparum malaria. Primaquine is primarily active against the sexual stages (gametocytes) of P. falciparum with only a weak effect on its asexual blood stages that cause the disease in humans. Despite the absence of documented interaction between Coartem and primaquine which would impact efficacy or the auditory brainstem pathway response, it was deemed necessary to define the conditions of its use in order to preclude any confounding effects that may affect the study outcome. As per the present amendment, it is now recommended to administer primaquine only at Day 7, once the study primary endpoint has been assessed. Audiometric testing specific exclusion criteria were ambiguously worded in the study synopsis and have been corrected. Pharmacokinetic sampling was reduced by one blood sample that was incorrectly included in the visit schedule.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
