

Clinical trial results:

A phase III randomized open-label multi-center study of ruxolitinib vs. best available therapy in patients with corticosteroid-refractory chronic graft versus host disease after allogeneic stem cell transplantation.

Due to EudraCT system limitations, which EMA is aware of, results of crossover studies and data using 999 as data points are not accurately represented in this record. Please go to <https://www.novctrd.com/CtrdWeb/home.nov> for complete trial results

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000901-PIP04-17

Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 December 2022
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	15 December 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare the efficacy of ruxolitinib vs. Investigator's choice Best Available Therapy (BAT) in patients with moderate or severe SR-cGvHD assessed by Overall Response Rate (ORR) at the Cycle 7 Day 1 visit.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 June 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

From 65 to 84 years	50
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted in 29 countries globally. During the main treatment period, participants were randomly assigned to a ruxolitinib arm or a Best Available Therapy (BAT) arm for 6 cycles of treatment. On Cycle 7 Day 1 and thereafter, participants in the BAT arm could cross over to ruxolitinib treatment.

Pre-assignment

Screening details:

A total of 404 participants were screened, of whom 72 were screen failures and 3 were not randomized for various reasons. Out of the 329 participants randomized, 6 did not receive BAT due to logistical reasons. A total of 329 participants were included in the Full Analysis Set (FAS); 165 were in the ruxolitinib arm and 164 were in the BAT arm.

Period 1

Period 1 title	End of Randomization/Crossover Periods (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	No
Arm title	Ruxolitinib

Arm description:

Ruxolitinib was administered orally twice per day at a dose of 10 milligrams (mg).

Arm type	Experimental
Investigational medicinal product name	Ruxolitinib
Investigational medicinal product code	INC424
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Ruxolitinib was administered orally twice per day at a dose of 10 mg bid, as two 5-mg tablets and was taken without regard to food.

Arm title	Best Available Therapy
------------------	------------------------

Arm description:

Subjects received best available therapies (BATs), including, but not limited to, extracorporeal photopheresis (ECP), low-dose methotrexate (MTX), mycophenolate mofetil (MMF), mTOR inhibitors (everolimus or sirolimus), infliximab, rituximab, pentostatin, imatinib, and ibrutinib based on the investigator's decision.

Arm type	Active comparator
Investigational medicinal product name	extracorporeal photopheresis (ECP)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Blood fraction modifier
Routes of administration	Intravenous use

Dosage and administration details:

0 mg weekly/every 2 weeks, taken intravenously. As these treatments varied from administered tablets to cellular therapy and photopheresis, the open-label design of this study was inevitable to accommodate the variety of treatments that were considered by investigators for these patients. Additionally, there was a necessity for modifications and dose adjustments in these therapies depending on the subject's response made utilizing a placebo operationally impossible and would have presented an undue burden to the patient.

Investigational medicinal product name	low-dose methotrexate (MTX)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

10 mg weekly, 1 week on/1 week off, taken orally. As these treatments varied from administered tablets to cellular therapy and photopheresis, the open-label design of this study was inevitable to accommodate the variety of treatments that were considered by investigators for these patients. Additionally, there was a necessity for modifications and dose adjustments in these therapies depending on the subject's response made utilizing a placebo operationally impossible and would have presented an undue burden to the patient.

Investigational medicinal product name	mycophenolate mofetil (MMF)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

2000 mg per day, taken orally. As these treatments varied from administered tablets to cellular therapy and photopheresis, the open-label design of this study was inevitable to accommodate the variety of treatments that were considered by investigators for these patients. Additionally, there was a necessity for modifications and dose adjustments in these therapies depending on the subject's response made utilizing a placebo operationally impossible and would have presented an undue burden to the patient.

Investigational medicinal product name	Everolimus
Investigational medicinal product code	RAD001
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

2 mg per day, taken orally. As these treatments varied from administered tablets to cellular therapy and photopheresis, the open-label design of this study was inevitable to accommodate the variety of treatments that were considered by investigators for these patients. Additionally, there was a necessity for modifications and dose adjustments in these therapies depending on the subject's response made utilizing a placebo operationally impossible and would have presented an undue burden to the patient.

Investigational medicinal product name	Infliximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Blood fraction modifier
Routes of administration	Intravenous use

Dosage and administration details:

400 mg every 2 weeks, taken intravenously. As these treatments varied from administered tablets to cellular therapy and photopheresis, the open-label design of this study was inevitable to accommodate the variety of treatments that were considered by investigators for these patients. Additionally, there was a necessity for modifications and dose adjustments in these therapies depending on the subject's response made utilizing a placebo operationally impossible and would have presented an undue burden to the patient.

Investigational medicinal product name	Sirolimus
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

0.5 mg every 2 weeks, taken orally. As these treatments varied from administered tablets to cellular therapy and photopheresis, the open-label design of this study was inevitable to accommodate the variety of treatments that were considered by investigators for these patients. Additionally, there was a necessity for modifications and dose adjustments in these therapies depending on the subject's response made utilizing a placebo operationally impossible and would have presented an undue burden to the patient.

Investigational medicinal product name	Ibrutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

420 mg per day, taken orally. As these treatments varied from administered tablets to cellular therapy and photopheresis, the open-label design of this study was inevitable to accommodate the variety of treatments that were considered by investigators for these patients. Additionally, there was a necessity for modifications and dose adjustments in these therapies depending on the subject's response made utilizing a placebo operationally impossible and would have presented an undue burden to the patient.

Investigational medicinal product name	Imatinib
Investigational medicinal product code	STI571
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

200 mg per day, taken orally. As these treatments varied from administered tablets to cellular therapy and photopheresis, the open-label design of this study was inevitable to accommodate the variety of treatments that were considered by investigators for these patients. Additionally, there was a necessity for modifications and dose adjustments in these therapies depending on the subject's response made utilizing a placebo operationally impossible and would have presented an undue burden to the patient.

Arm title	Ruxolitinib Cross-Over Period (Other)
------------------	---------------------------------------

Arm description:

Participants from the BAT arm at the end of Cycle 6 crossed over to ruxolitinib treatment.

Arm type	Experimental
Investigational medicinal product name	Ruxolitinib
Investigational medicinal product code	INC424
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Ruxolitinib was administered orally twice per day at a dose of 10 milligrams (mg).

End points

End points reporting groups

Reporting group title	Ruxolitinib
Reporting group description: Ruxolitinib was administered orally twice per day at a dose of 10 milligrams (mg).	
Reporting group title	Best Available Therapy
Reporting group description: Subjects received best available therapies (BATs), including, but not limited to, extracorporeal photopheresis (ECP), low-dose methotrexate (MTX), mycophenolate mofetil (MMF), mTOR inhibitors (everolimus or sirolimus), infliximab, rituximab, pentostatin, imatinib, and ibrutinib based on the investigator's decision.	
Reporting group title	Ruxolitinib Cross-Over Period (Other)
Reporting group description: Participants from the BAT arm at the end of Cycle 6 crossed over to ruxolitinib treatment.	

Primary: Efficacy of ruxolitinib versus investigator's choice best available therapy (BAT) in participants with moderate or severe Steroid Refractory Chronic Graft versus Host Disease (SR-cGvHD) assessed by overall response rate (ORR) at the Cycle 7 Day 1 visit

End point title	Efficacy of ruxolitinib versus investigator's choice best available therapy (BAT) in participants with moderate or severe Steroid Refractory Chronic Graft versus Host Disease (SR-cGvHD) assessed by overall response rate (ORR) at the Cycle 7 Day 1 visit ^[1]
End point description: ORR was defined as the percentage of participants in each arm demonstrating a complete response (CR) or partial response (PR) based on chronic GvHD (cGvHD) disease assessments (National Institutes of Health Consensus Criteria) without the requirement of additional systemic therapies for an earlier progression, mixed response, or non-response. Scoring of response was relative to the organ score at the time of randomization. CR: complete resolution of all signs and symptoms of cGvHD in all evaluable organs without the initiation or addition of new systemic therapy. PR: improvement in at least one organ (e.g., improvement of 1 or more points on a 4- to 7-point scale, or an improvement of 2 or more points on a 10- to 12-point scale) without progression in other organs or sites, initiation, or addition of new systemic therapies.	
End point type	Primary
End point timeframe: Cycle 7 Day 1 (24 weeks [each cycle was comprised of 4 weeks])	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analysis was planned for this arm.

Secondary: Rate of participants with clinically relevant improvement of the modified Lee cGvHD symptom scale score

End point title	Rate of participants with clinically relevant improvement of the modified Lee cGvHD symptom scale score ^[4]
-----------------	--

End point description:

To assess improvement of symptoms based on the total symptom score (TSS); a responder was defined as having achieved a clinically relevant reduction from Baseline of the TSS. The scale consists of 30 items in 7 subscales (skin, eye, mouth, lung, nutrition, energy, and psychological). Participants reported their level of symptom "bother" over the previous month on a 5-point likert scale: not at all, slightly, moderately, quite a bit, or extremely. Subscale scores and the summary score range from 0 to 100, with a higher score indicating worse symptoms.

Secondary: Percentage of participants successfully tapered off of all corticosteroids up to Cycle 7 Day 1

End point title	Percentage of participants successfully tapered off of all corticosteroids up to Cycle 7 Day 1 ^[16]
-----------------	--

End point description:

All corticosteroid dosages prescribed to the participant and all dose changes during the study were to be recorded for assessment of participants who successfully tapered off of all corticosteroids. Participants who completely tapered off corticosteroids refer to those who permanently discontinued steroids as per the dose administration panel and who did not restart steroids in the same interval. Participants who were tapered off and continued follow-up were also counted as being tapered off with 0 dose in subsequent intervals until they discontinued from the main treatment period or restarted steroid treatment.

End point type	Secondary

Secondary: Change from Baseline in Functional Assessment of Cancer Therapy – Bone Marrow Transplantation (FACT-BMT)

End point title	Change from Baseline in Functional Assessment of Cancer Therapy – Bone Marrow Transplantation (FACT-BMT) ^[18]
-----------------	--

End point description:

Change from Baseline was calculated as the post-Baseline value minus the Baseline value. The FACT-BMT is a 50-item self-report questionnaire that measures the effect of a therapy on domains including physical, functional, social/family, and emotional well-being, together with additional concerns relevant for bone marrow transplantation participants. The questions were based on a 5-point Likert scale, where 0 corresponds to "not at all" and 4 corresponds to "very much." The higher the final score, the better the quality of life. The FACT-BMT total score ranges from 0 to 148.

End point type	Secondary
----------------	-----------

[28] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analysis was planned for this arm.

End point values	Ruxolitinib	Best Available Therapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	165	158		
Units: percentage of participants				
number (not applicable)	57.0	65.8		

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline to when the last participant received the last dose (+30 days); up to approximately 318 weeks

Adverse event reporting additional description:

Treatment-emergent adverse events, defined as adverse events that started or worsened during the on-treatment period (either Randomized or Cross-over Period), have been reported for the Safety Set, which included subjects who received at least one dose of drug. A total of 6 subjects in the BAT arm discontinued before receiving the first dose.

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	25.1
--------------------	------

Reporting groups

Reporting group title	Ruxolitinib
-----------------------	-------------

Reporting group description:

Ruxolitinib was administered orally twice per day at a dose of 10 milligrams (mg).

Reporting group title	Ruxolitinib Cross-Over Period
-----------------------	-------------------------------

Reporting group description:

Subjects from the BAT arm at the end of Cycle 6 crossed over to ruxolitinib treatment.

Reporting group title	Best Available Therapy
-----------------------	------------------------

Reporting group description:

Subjects received best available therapies (BATs), including, but not limited to, extracorporeal photopheresis (ECP), low-dose methotrexate (MTX), mycophenolate mofetil (MMF), mTOR inhibitors (everolimus or sirolimus), infliximab, rituximab, pentostatin, imatinib, and ibrutinib based on the investigator's decision.

Serious adverse events	Ruxolitinib	Ruxolitinib Cross-Over Period	Best Available Therapy
Total subjects affected by serious adverse events			
subjects affected / exposed	86 / 165 (52.12%)	27 / 70 (38.57%)	71 / 158 (44.94%)
number of deaths (all causes)	37	10	40
number of deaths resulting from adverse events	8	1	4

Back pain subjects affected / exposed occurrences (all)	18 / 165 (10.91%) 18	5 / 70 (7.14%) 5	10 / 158 (6.33%) 10
Myalgia subjects affected / exposed occurrences (all)	17 / 165 (10.30%) 18	1 / 70 (1.43%) 1	7 / 158 (4.43%) 8

Pain in extremity subjects affected / exposed occurrences (all)	10 / 165 (6.06%) 10	1 / 70 (1.43%) 1	5 / 158 (3.16%) 5
Infections and infestations			
Pneumonia subjects affected / exposed occurrences (all)	8 / 165 (4.85%) 9	6 / 70 (8.57%) 11	11 / 158 (6.96%) 11
Urinary tract infection subjects affected / exposed occurrences (all)	13 / 165 (7.88%) 21	4 / 70 (5.71%) 5	9 / 158 (5.70%) 17
Upper respiratory tract infection subjects affected / exposed occurrences (all)	19 / 165 (11.52%) 22	12 / 70 (17.14%) 21	15 / 158 (9.49%) 23
BK virus infection subjects affected / exposed occurrences (all)	9 / 165 (5.45%) 9	3 / 70 (4.29%) 3	2 / 158 (1.27%) 2
Bronchitis subjects affected / exposed occurrences (all)	7 / 165 (4.24%) 8	7 / 70 (10.00%) 8	3 / 158 (1.90%) 5
COVID-19 subjects affected / exposed occurrences (all)	8 / 165 (4.85%) 9	5 / 70 (7.14%) 6	1 / 158 (0.63%) 2
Conjunctivitis subjects affected / exposed occurrences (all)	13 / 165 (7.88%) 17	2 / 70 (2.86%) 2	6 / 158 (3.80%) 6
Cytomegalovirus infection reactivation subjects affected / exposed occurrences (all)	8 / 165 (4.85%) 10	4 / 70 (5.71%) 5	15 / 158 (9.49%) 23
Influenza subjects affected / exposed occurrences (all)	16 / 165 (9.70%) 18	2 / 70 (2.86%) 2	10 / 158 (6.33%) 12
Nasopharyngitis subjects affected / exposed occurrences (all)	17 / 165 (10.30%) 24	1 / 70 (1.43%) 3	10 / 158 (6.33%) 14
Metabolism and nutrition disorders			

Hypokalaemia			
subjects affected / exposed	15 / 165 (9.09%)	2 / 70 (2.86%)	22 / 158 (13.92%)
occurrences (all)	25	2	47
Hypophosphataemia			
subjects affected / exposed	4 / 165 (2.42%)	4 / 70 (5.71%)	8 / 158 (5.06%)
occurrences (all)	7	9	8
Hypomagnesaemia			
subjects affected / exposed	8 / 165 (4.85%)	2 / 70 (2.86%)	11 / 158 (6.96%)
occurrences (all)	11	2	16
Hyperuricaemia			
subjects affected / exposed	9 / 165 (5.45%)	2 / 70 (2.86%)	1 / 158 (0.63%)
occurrences (all)	9	2	1
Hypertriglyceridaemia			
subjects affected / exposed	16 / 165 (9.70%)	4 / 70 (5.71%)	14 / 158 (8.86%)
occurrences (all)	21	6	15
Hyperkalaemia			
subjects affected / exposed	12 / 165 (7.27%)	5 / 70 (7.14%)	4 / 158 (2.53%)
occurrences (all)	14	6	4
Hyperglycaemia			
subjects affected / exposed	13 / 165 (7.88%)	1 / 70 (1.43%)	6 / 158 (3.80%)
occurrences (all)	20	1	8
Hypercholesterolaemia			
subjects affected / exposed	13 / 165 (7.88%)	8 / 70 (11.43%)	2 / 158 (1.27%)
occurrences (all)	15	8	2

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 December 2017	The main purpose of the amendment was to extend the available patient population. Due to protracted enrollment and feedback from health authorities and investigators, several inclusion and exclusion criteria were revised. Additionally, with the recent approval of ibrutinib the original protocol-defined list of BAT options would not allow for a complete comparative assessment versus ruxolitinib. Therefore, adding ibrutinib to this list was necessary to reflect the complete list of treatment options for this patient population. Lastly, a Data Monitoring Committee was added based on health authority feedback to include an independent review group.
07 October 2021	The main purpose of the amendment was to restrict the use of live attenuated vaccines (specifically against SARS-CoV-2) in this population with immunocompromised state while on study treatment. Due to feedback from health authorities and based on a risk assessment, protocol language was revised for prohibited concomitant medication. These changes did not add risk to the subject population.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, results of crossover studies and data using 999 as data points are not accurately represented in this record. Please go to <https://www.novctrd.com/CtrdWeb/home.nov> for complete trial results
