

Clinical trial results:

Pivotal Study of Derazantinib in Patients With Inoperable or Advanced Intrahepatic Cholangiocarcinoma and FGFR2 Gene Fusions or FGFR2 Gene Mutations or Amplifications

Summary

EudraCT number	2016-004448-12
Trial protocol	IT GB DE IE ES
Global end of trial date	25 October 2022

Results information

Result version number	v1 (current)
This version publication date	10 November 2023
First version publication date	10 November 2023

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 December 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 October 2022
Global end of trial reached?	Yes
Global end of trial date	25 October 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Primary objective

Substudy 1: To evaluate the anti-cancer activity by Objective Response Rate (ORR) by blinded independent central review as per Response Evaluation Criteria in Solid Tumors (RECIST) version 1.1 in patients with inoperable or advanced iCCA whose tumors harbor FGFR2 fusions (by FISH performed by a central laboratory) and who received at least one prior regimen of systemic therapy.

Substudy 2: To evaluate the anti-tumor activity of derazantinib by progression-free survival at 3 months (PFS3) based on survival status or blinded independent central review (RECIST 1.1) in patients with inoperable or advanced iCCA whose tumors harbor FGFR2 mutations or amplifications, and who received at least one prior regimen of systemic therapy.

Protection of trial subjects:

The study was conducted according to the ethical principles that have their origins in the World Medical Association's Declaration of Helsinki, the International Council for Harmonisation (ICH) E6 Good Clinical Practice, and all applicable national and local laws and regulations for the conduct of clinical research and the protection of personal data. If conflicts between local laws and regulations arose, the more stringent requirements were adopted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 September 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	United States: 70
Country: Number of subjects enrolled	Spain: 8
Country: Number of subjects enrolled	United Kingdom: 5
Country: Number of subjects enrolled	Germany: 3
Country: Number of subjects enrolled	Italy: 50
Worldwide total number of subjects	147
EEA total number of subjects	65

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	102
From 65 to 84 years	45
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 729 patients underwent molecular screening, and 148 were enrolled. One patient was subsequently not confirmed to have fibroblast growth factor receptor 2 (FGFR2) fusion, and was excluded from the Safety/ITT population, meaning that for all Safety/ITT population analyses 147 patients were included (Substudy 1 = 103, Substudy = 44).

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Derazantinib
-----------	--------------

Arm description:

Derazantinib was administered orally at 300 mg once daily

Arm type	Experimental
Investigational medicinal product name	Derazantinib
Investigational medicinal product code	BAL101553
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Derazantinib, an investigational drug was supplied as 100 mg powder-filled capsules for oral administration in this open-label study. All patients received derazantinib at 300 mg once daily. Derazantinib capsules were administered 1 hour before, or at least 2 hours after, a meal.

Number of subjects in period 1	Derazantinib
Started	147
Completed	0
Not completed	147
Adverse event, serious fatal	5
Clinical progression	23
Consent withdrawn by subject	4
Physician decision	5
Radiographic disease progression	91
Adverse event, non-fatal	8
Other reasons	10
Lost to follow-up	1

Baseline characteristics

Reporting groups

Reporting group title	Derazantinib
Reporting group description:	
Derazantinib was administered orally at 300 mg once daily

Subject analysis sets

Subject analysis set title	Substudy 1
Subject analysis set type	Safety analysis

Subject analysis set description:

Substudy 1 (safety and intent-to-treat (ITT) population) comprised of patients with inoperable or advanced iCCA with FGFR2 fusions and who had received any amount of study drug

Derazantinib was administered orally at 300 mg once daily

Subject analysis set title	Substudy 2
Subject analysis set type	Safety analysis

Subject analysis set description:

Substudy 2 (safety and intent-to-treat (ITT) population) comprised of patients with with inoperable or advanced iCCA with FGFR2 mutations or amplifications and who had received any amount of study drug

Derazantinib was administered orally at 300 mg once daily

Subject analysis set title	mITT Substudy 2
Subject analysis set type	Modified intention-to-treat

Subject analysis set description:

mITT Population: included all patients in the Safety/ITT population, who had at least one post-baseline disease assessment (at least one post-baseline imaging assessment in accordance with RECIST 1.1, or documented clinical progression [every effort was made to objectively assess radiographic progression]), or reported death during the treatment period.

Reporting group values	Substudy 1	Substudy 2	mITT Substudy 2

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 April 2017	<ul style="list-style-type: none">• Change the in vitro companion diagnostic device (IVD) designated for use in the trial• As an addition to Section 3.1, blood samples for tumor markers were to be collected for all enrolled subjects. Blood samples for biomarkers and ctDNA were to be collected only if the study passed the interim analysis and collected from newly enrolled subjects.
13 April 2017	<ul style="list-style-type: none">• Clarified that medication could be administered with or without food• Clarifications added concerning exploratory objective and efficacy endpoints• 'Creatinine clearance of ≥ 60 mL/min as estimated by the Cockcroft-Gault equation' was added to the inclusion criteria• It was clarified in Section 6.7 Tumor Biopsy, that 'archived tissue specimens may be submitted if they meet the requirements outlined in the Laboratory Manual.'• Section 10.6.3 Exploratory Efficacy Analyses was augmented to include that 'Other analyses such as correlation between tumor and biomarkers, toxicity, responses, and PK parameters to be conducted and to be further described in the Statistical Analysis Plan.'
10 October 2017	<ul style="list-style-type: none">• Made minor change to title page to clarify the designation of the study as phase 2 rather than phase 3. This change was also reflected in the synopsis and elsewhere if noted.• Added the name of the medical monitor to title page.

25 September 2018	<ul style="list-style-type: none"> • The change in sponsorship from ArQule Inc. to Basilea Pharmaceutica International Ltd. was implemented in the protocol. • The exploratory evaluation of ORR using modified RECIST criteria was removed from the protocol. • The exploratory objectives were amended so that time to progression by blinded independent central review for derazantinib was to be evaluated overall, and not only by line of prior systemic therapy. The associated exploratory endpoints were updated for consistency. • Inclusion criterion 4 was changed to clarify the approach to the assessment of FGFR2 gene fusion status for the purposes of enrollment. Similar clarification was added to other related sections of the protocol. • Additional ECG assessments were scheduled to coincide with each collection of a plasma sample for pharmacokinetic assessment. • The protocol and Informed Consent Form were changed to specify that metabolites of derazantinib could be assessed from the same samples already planned to determine the population PK parameters of derazantinib. • Change of the safety vendor. • Text restricting the 30-day safety follow-up to adverse events thought to be related to study drug was deleted. • The definition of a related adverse event was clarified to include any adverse event considered definitely, probably, or possibly related to derazantinib, or when the relationship is unknown. • The reference to treatment groups was removed from Section 10.3 (Safety Analyses), along with consistency corrections in the same section. • A change was made to permit an earlier interim analysis if 5 or more objective responses were observed and confirmed based on blinded independent central review before the the previously-required enrollment of 40 evaluable patients
-------------------	--

19 February 2019	<ul style="list-style-type: none"> • Study expanded by adding a separate group of patients with FGFR2 gene mutations or amplifications to assess the potential expanded utility of derazantinib in the treatment of ICCA. • The original primary objective of the study was adjusted to allow both the original patients (now termed Substudy 1 and Substudy 2) to be included in the primary objectives. The primary objective of Substudy 2 was to evaluate the anti-tumor activity of derazantinib by progression-free survival at 3 months (PFS3). • Addressed requests by Health Authorities among others considering Clinical Trial Applications in additional countries, including: Revision of sections related to pregnancy and contraception; revision of sections related to QT/QTc; revision of sections related to UV-light protection. • Implemented central ECG assessments. • Defined subgroups of patients who underwent a more intensive biomarker and/or PK assessment schedule. • Clarifications added concerning screening procedures for genomic aberrations. • The secondary objectives of the study were amended to include for Substudy 2 an objective to evaluate the anti-cancer activity by ORR by central radiology. • Exploratory endpoints were added. • For patient-reported outcomes, an additional outcome for HRQOL (the EuroQoL-5D visual analog scale) was included. • Various inclusion and exclusion criteria were updated • A complete eye examination was added to the list of assessments to be conducted at the 30-day Safety Follow-up Visit. • Relevant examinations and laboratory tests were updated • Provision for informed consent to participate in the study to be provided by the patient's legal representative was removed.
22 July 2019	<ul style="list-style-type: none"> • Section 3.4 was amended to clarify that for patients who demonstrate continued benefit from derazantinib at the time of study closure, the Sponsor aims to provide continued access to derazantinib. • Clarified that patients considered eligible for enrollment in Substudy 2 should have exhausted all satisfactory treatment alternatives. • Exclusion criterion 9 was amended to require patients enrolled in the study to have serum potassium levels within normal ranges. • Section 7.3.3 was clarified that in the event of a prolonged QTc interval ≥ 501 ms being observed on at least two separate ECGs (CTCAE v4.03 Grade 3 event), derazantinib was to be withheld until the QTc has returned to ≤ 470 msec, and a decision made whether to continue treatment with derazantinib. • Clarified the position for patients who were enrolled and dosed on the basis of a positive local test result for FGFR2 gene fusion (Substudy 1). • For the management of patients whose FGFR2 gene fusion status was not centrally confirmed after treatment has commenced, the a case by case assessment was required for these patients. • Inclusion criterion 9 was amended to ensure that 'highly effective' contraceptive measures were required during the study; 'acceptable' birth control methods were not sufficient. • Clarifications to tumor assessment methods were added. • Clarification in Appendix 8 (List of FGFR2 mutations eligible for enrollment in Substudy 2) that newly detected mutations could be added to the list

06 September 2019	<ul style="list-style-type: none"> • CYP2C8 ligands were added to the list of CYP enzymes in Appendix 4, substrates of which should be avoided or used with caution. • A requirement was added to Section 6.8 for patients who discontinue study drug treatment to have a tumor assessment as soon as possible after discontinuation. • It was clarified that the Substudy 2 sample size refers to mITT-evaluable patients. • Section 10.7 was amended to clarify that in Substudy 2, a decision to proceed with Stage 2 or stop for futility was to be made as soon as the number of events allows it, and that enrollment in Stage 2 was to be suspended if the required number of patients was not reached at the time of full enrollment to Stage 1. • Time windows were introduced for PK sample collection and the collection of the 10 and 12 hours samples was made optional. • The list of FGFR2 mutations eligible for enrollment in Substudy 2 was updated in Appendix 8.
17 November 2020	<ul style="list-style-type: none"> • Details were added throughout the protocol update and clarify details of alternative NGS testing options for prospective patient enrollment in Substudy 2. • The FGFR2 genetic aberration status required for eligibility for Substudy 2 was clarified, along with the testing requirements. • The definition of adequate renal function for eligibility for enrollment into the study, was updated to a creatinine clearance of ≥ 30 mL/min as estimated by the Cockcroft-Gault equation. • Details regarding prohibited prior anti-cancer treatments were updated. • Further clarification was made regarding previous treatments with an FGFR inhibitor, which exclude the patient from eligibility for the study. • Further details were added regarding ophthalmological exclusion criteria. • Patients with any severe infections were added to exclusions from study. • References to a biomarker study were changed to pharmacodynamic assessments, and the processes for collecting archival tumor and blood and urine samples, and for conducting pharmacodynamic analyses, were clarified accordingly. • Administration of derazantinib with a light meal was permitted in the event of nausea or vomiting which is assessed as moderate (CTCAE Grade ≥ 2). • Advice relating to dose delays/reductions in the event of a CTCAE Grade 4 adverse event was revised. • The CSP was updated to include a new requirement to perform complete ophthalmological examination. • Transaminase elevations (AST and ALT increased) were removed from the list of potential risks, and upgraded to an identified risk. Phototoxicity was removed from the list of potential risks. The list of important potential risks was updated to include hyponatremia, and redefined 'creatinine increase' as 'blood creatinine increased / renal disorders'. • Removed the list of FGFR2 genetic aberrations (GAs) eligible for enrollment in Substudy 2 from Appendix 8, in favor of a description of the categories of applicable GAs

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The following secondary endpoints could not be shown due to the restrictions of the EudraCT system; duration of response and progression free survival. The figures are on CT.gov:
<https://clinicaltrials.gov/study/NCT03230318>

Notes:
