

Clinical trial results:

A randomised, controlled, open-label study to confirm the efficacy and safety of sedation with isoflurane in invasively ventilated ICU patients using the AnaConDa administration system

Summary

EudraCT number	2016-004551-67
Trial protocol	DE SI
Global end of trial date	11 February 2020

Results information

Result version number	v1 (current)
This version publication date	27 February 2021
First version publication date	27 February 2021

Trial information

Trial identification

Sponsor protocol code	SED001

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 October 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	11 February 2020
Global end of trial reached?	Yes
Global end of trial date	11 February 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate that sedation with isoflurane is non-inferior to propofol in terms of maintaining adequate sedation without rescue sedation.

Protection of trial subjects:

Serious adverse event collection started at signing of the informed consent, adverse event collection started from first administration of IP and continued until the follow-up assessments.

Additional safety assessments were safety laboratory, ECG, physical examination, vital signs, ventilator parameters, CAM-ICU, SOFA, SAPS II, SBT, ICU length of stay, ICU-free days, ventilator time, ventilator free days.

In case of inadequate sedation or acute agitation which was not controlled by administration of maximum allowed study sedation level, study sedation bolus doses and co-treatment with analgesic agent was allowed.

Patient had the right to withdraw consent to participation at any time and without providing reasons.

The study was performed in accordance with ethical principles that have their origin in the Declaration of Helsinki and are consistent with International Conference of Harmonization (ICH)/Good Clinical Practice (GCP) E6 (R1), European Union (EU) Clinical Trials Directive, and applicable local regulatory requirements. In accordance with the EU Data Protection Directive (95/46/EC), the data will not identify any persons taking part in the study.

Background therapy:

Apart from study treatments, all subjects in the study was given standard of care treatment in ICU.

Evidence for comparator: -

Actual start date of recruitment	05 June 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Slovenia: 15
Country: Number of subjects enrolled	Germany: 286
Worldwide total number of subjects	301
EEA total number of subjects	301

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	138
From 65 to 84 years	152
85 years and over	11

Subject disposition

Recruitment

Recruitment details:

In total 26 sites in Germany and three sites in Slovenia were approved for the study; 21 of the German sites and three of the Slovenian sites enrolled patients into the study. First patient in: 2 July 2017. Last patient completed: 11 February 2020.

Pre-assignment

Screening details:

A pre-screening was done on all mechanically ventilated patients who entered the ICU. The most common main reason for exclusion for participation was "Not clinically likely to need invasive ventilation and sedation ≥ 24 hours at randomisation". Patients that passed the pre-screening were then formally screened.

Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This study was open-label thus no treatment kit blinding was applied for subjects and/or site personnel. Cumulative data, used for example for sample size re-estimation (SSRE) and data safety review, was blinded. Also data analyst and sponsor was blinded to treatment allocation during the trial.

Arms

Are arms mutually exclusive?	Yes
Arm title	Isoflurane

Arm description:

Isoflurane administered by inhalation via AnaConDa

Arm type	Experimental
Investigational medicinal product name	Isoflurane
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation vapour, liquid
Routes of administration	Inhalation use

Dosage and administration details:

Isoflurane was given continuously during the treatment period via the AnaConDa device.

Dosage was titrated stepwise by increasing/decreasing the infusion rate by 0.5 to 1.0 mL/h as needed up to maximum 1.5 volume % (Vol%) to achieve the prescribed target sedation depth i.e. within RASS -1 to -4.

Arm title	Propofol
------------------	----------

Arm description:

Propofol infusion

Arm type	Active comparator
Investigational medicinal product name	Propofol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Emulsion for injection/infusion
Routes of administration	Intravenous drip use

Dosage and administration details:

Propofol was given IV continuously during the treatment period.

Dosage was titrated stepwise by increasing/decreasing approximately 0.5-0.8 mg/kg/h each time as needed between 0.3 and 4.0 mg/kg/h to achieve the target sedation depth i.e. within RASS -1 to -4.

Number of subjects in period 1	Isoflurane	Propofol
Started	150	151
Completed	150	151

Period 2

Period 2 title	Treatment
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Isoflurane

Arm description: -

Subject analysis set title	Isoflurane Per Protocol Population
Subject analysis set type	Per protocol
Subject analysis set description: Patients in the PP analysis was a subset of the FAS population fulfilling the following criteria; <ul style="list-style-type: none">• Meeting all inclusion criteria and none of the exclusion criteria• Receiving study treatments for more than 12 hours• At least 5 scheduled RASS assessments performed during the study treatment for patients sedated more than 14 hours. For patients sedated for less than 14 hours 4 scheduled RASS assessments will be required for PP analysis set inclusion.• No major protocol violations that would impact non-inferiority analysis or ef-ficacy analysis.	
Subject analysis set title	Propofol Per Protocol Population
Subject analysis set type	Per protocol
Subject analysis set description: Patients in the PP analysis was a subset of the FAS population fulfilling the following criteria; <ul style="list-style-type: none">• Meeting all inclusion criteria and none of the exclusion criteria• Receiving study treatments for more than 12 hours• At least 5 scheduled RASS assessments performed during the study treatment for patients sedated more than 14 hours. For patients sedated for less than 14 hours 4 scheduled RASS assessments will be required for PP analysis set inclusion.• No major protocol violations that would impact non-inferiority analysis or ef-ficacy analysis.	
Primary: Percentage of time on adequate sedation depth	
End point title	Percentage of time on adequate sedation depth
End point description: Endpoint measures percentage of time with adequate sedation depth without any rescue medication. Adequate sedation depth is defined as having a Richmond agitation sedation scale (RASS-value) between (-1 to -4). The percentage of time on adequate sedation depth was derived as the total amount of time that the patient remained within the prescribed target RASS range (-1 to -4) without rescue medication divided by the amount of time the patient is receiving the study treatment, multiplied by 100%.	
End point type	Primary
End point timeframe: Minimum sedation time 12 hours maximum sedation time 48 + 6 hours.	

End point values	Isoflurane Per Protocol Population	Propofol Per Protocol Population		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	146	148		
Units: percent				
least squares mean (confidence interval 95%)	90.691 (86.770 to 94.612)	91.143 (87.232 to 95.054)		

Statistical analyses

Statistical analysis title	Non-inferiority analysis
Statistical analysis description:	
Non-inferiority comparison of isoflurane compared to propofol. Least square means and model-based estimate of the difference between the treatment groups, including a 2-sided 95% confidence interval was reported in the statistical analysis.	
Comparison groups	Isoflurane Per Protocol Population v Propofol Per Protocol Population
Number of subjects included in analysis	294
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
Parameter estimate	Mean difference (final values)
Point estimate	-0.452
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.996
upper limit	2.093

Notes:

[1] - The non-inferiority criterion was treatment relative difference of less than 15%.

Secondary: Wake-up test 24H

End point title	Wake-up test 24H
End point description:	
Time (in minutes) from start of wake-up test until reaching RASS ≥0	
End point type	Secondary
End point timeframe:	
Wake-up test performed at 24 hours after start of study sedation	

End point values	Isoflurane	Propofol		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	122	121		
Units: Minutes				
median (confidence interval 95%)	15.0 (11.0 to 29.0)	19.0 (15.0 to 30.0)		

Statistical analyses

Statistical analysis title	Time to wake-up, Wake-up test 24H
Statistical analysis description: The statistical analysis of time to wake-up in the Wake-up test at 24h was conducted using a Cox regression-model.	
Comparison groups	Isoflurane v Propofol
Number of subjects included in analysis	243
Analysis specification	Pre-specified
Analysis type	superiority ^[2]
P-value	= 0.099
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.28
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.955
upper limit	1.717

Notes:

[2] - Treatment groups were compared using a hazard ratio with corresponding 95 % confidence interval. A hazard ratio above 1 means shorter time to event (in average) in the Isoflurane group.

Secondary: Wake-up test 48H

End point title	Wake-up test 48H
End point description: Time (in minutes) from start of wake-up test until reaching RASS ≥ 0	
End point type	Secondary
End point timeframe: Wake-up test performed at 48 hours after start of study sedation	

End point values	Isoflurane	Propofol		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	75	65		
Units: Minutes				
median (confidence interval 95%)	20 (15 to 30)	30 (15 to 45)		

Statistical analyses

Statistical analysis title	Time to wake-up, Wake-up test 48H
Statistical analysis description: The statistical analysis of time to wake-up in the Wake-up test at 48h was conducted using a Cox regression-model.	
Comparison groups	Isoflurane v Propofol
Number of subjects included in analysis	140
Analysis specification	Pre-specified
Analysis type	superiority ^[3]
P-value	= 0.001
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	2.081
Confidence interval	
level	95 %
sides	2-sided
lower limit	1.339
upper limit	3.233

Notes:

[3] - Treatment groups were compared using a hazard ratio with corresponding 95 % confidence interval. A hazard ratio above 1 means shorter time to event (in average) in the Isoflurane group.

Secondary: Opiate analgesic dose intensity

End point title	Opiate analgesic dose intensity
End point description: For each patient, opiate analgesic dose intensity was derived.	
End point type	Secondary
End point timeframe: Total sedation period up to 48±6 hours treatment.	

End point values	Isoflurane	Propofol		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	146	145		
Units: dose intensity				
least squares mean (confidence interval 95%)	0.228 (0.125 to 0.331)	0.321 (0.218 to 0.424)		

Statistical analyses

Statistical analysis title	Opiate dose intensity
Statistical analysis description: Opiate analgesic dose intensity adjusted for Behavioral Pain Scale (BPS) was compared between Isoflurane and Propofol.	
Comparison groups	Isoflurane v Propofol

Number of subjects included in analysis	291
Analysis specification	Pre-specified
Analysis type	superiority ^[4]
P-value	= 0.003
Method	Mixed models analysis
Parameter estimate	Mean difference (final values)
Point estimate	-0.093
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.154
upper limit	-0.032

Notes:

[4] - A negative value on point estimate indicate lower average opiate analgesic dose intensities for patients on Isoflurane adjusted for BPS.

Secondary: Time to extubation

End point title	Time to extubation
End point description:	
Only patients extubated (end of sedation before successful extubation) within 54h(48+6h) from study sedation start are included	
End point type	Secondary
End point timeframe:	
Time to extubation is the time between final sedation stop prior to a successful extubation	

End point values	Isoflurane	Propofol		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	60	67		
Units: Hours				
median (inter-quartile range (Q1-Q3))	0.5 (0.2 to 2.3)	0.7 (0.3 to 2.1)		

Statistical analyses

Statistical analysis title	Time to extubation
Statistical analysis description:	
Time to extubation was analysed using a Cox regression model.	
Comparison groups	Isoflurane v Propofol
Number of subjects included in analysis	127
Analysis specification	Pre-specified
Analysis type	superiority ^[5]
P-value	= 0.212
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.29

Confidence interval	
level	95 %
sides	2-sided
lower limit	0.864
upper limit	1.926

Notes:

[5] - Treatment groups were compared using a hazard ratio with corresponding 95 % confidence interval. A hazard ratio above 1 means shorter time to event (in average) in the Isoflurane group.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

SAE collection started at signing of the informed consent; adverse event collection started from first administration of IP.

Collection of (new) SAEs and AEs ended at the 24h follow-up visit.

Adverse event reporting additional description:

AEs or SAEs starting after the 24h follow-up was not recorded in the study database.

Assessment type	Systematic

Investigations Red blood cell count decreased subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	4 / 151 (2.65%) 4	
Blood creatine phosphokinase increased subjects affected / exposed occurrences (all)	2 / 150 (1.33%) 2	2 / 151 (1.32%) 2	
Blood pressure increased subjects affected / exposed occurrences (all)	2 / 150 (1.33%) 2	1 / 151 (0.66%) 1	
Blood glucose increased subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	1 / 151 (0.66%) 1	
Body temperature increased subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	
Haemoglobin decreased subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	
Blood potassium increased subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Platelet count decreased			

subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Oxygen saturation decreased subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	
Blood calcium decreased subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	
Blood bilirubin increased subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	
Blood albumin decreased subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	
Injury, poisoning and procedural complications			
Postoperative delirium subjects affected / exposed occurrences (all)	2 / 150 (1.33%) 2	1 / 151 (0.66%) 1	
Endotracheal Intubation Complication subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	2 / 151 (1.32%) 2	
Procedural pneumothorax subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Post procedural complication subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	
Cardiac disorders			
Atrial fibrillation subjects affected / exposed occurrences (all)	5 / 150 (3.33%) 5	4 / 151 (2.65%) 5	
Tachycardia subjects affected / exposed occurrences (all)	4 / 150 (2.67%) 4	3 / 151 (1.99%) 3	
Sinus tachycardia			

subjects affected / exposed occurrences (all)	3 / 150 (2.00%) 3	0 / 151 (0.00%) 0	
Supraventricular tachycardia subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	1 / 151 (0.66%) 1	
Tachyarrhythmia subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	2 / 151 (1.32%) 2	
Bradycardia subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	1 / 151 (0.66%) 1	
Ventricular tachycardia subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Left ventricular failure subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	
Bundle branch block right subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	
Cardiovascular disorder subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Nervous system disorders Myoclonus subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Seizure subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	
Blood and lymphatic system disorders Thrombocytopenia subjects affected / exposed occurrences (all)	3 / 150 (2.00%) 3	1 / 151 (0.66%) 1	
Leukocytosis			

subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Anaemia subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	
Gastrointestinal disorders			
Nausea subjects affected / exposed occurrences (all)	4 / 150 (2.67%) 4	2 / 151 (1.32%) 2	
Vomiting subjects affected / exposed occurrences (all)	3 / 150 (2.00%) 3	1 / 151 (0.66%) 1	
Tongue haematoma subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Tooth disorder subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Constipation subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Small intestinal perforation subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Gastrointestinal haemorrhage subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Skin and subcutaneous tissue disorders			
Dermatitis allergic subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	
Swelling face subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Renal and urinary disorders			

Oliguria			
subjects affected / exposed	7 / 150 (4.67%)	6 / 151 (3.97%)	
occurrences (all)	7	6	
Renal failure			
subjects affected / exposed	4 / 150 (2.67%)	0 / 151 (0.00%)	
occurrences (all)	4	0	
Renal impairment			
subjects affected / exposed	0 / 150 (0.00%)	1 / 151 (0.66%)	
occurrences (all)	0	1	
Anuria			
subjects affected / exposed	1 / 150 (0.67%)	0 / 151 (0.00%)	
occurrences (all)	1	0	
Chronic kidney disease			
subjects affected / exposed	1 / 150 (0.67%)	0 / 151 (0.00%)	
occurrences (all)	1	0	
Acute kidney injury			
subjects affected / exposed	0 / 150 (0.00%)	1 / 151 (0.66%)	
occurrences (all)	0	1	
Infections and infestations			
Sepsis			
subjects affected / exposed	0 / 150 (0.00%)	3 / 151 (1.99%)	
occurrences (all)	0	3	
Pneumonia			
subjects affected / exposed	0 / 150 (0.00%)	2 / 151 (1.32%)	
occurrences (all)	0	2	
Peritonitis			
subjects affected / exposed	0 / 150 (0.00%)	1 / 151 (0.66%)	
occurrences (all)	0	1	
Intervertebral discitis			
subjects affected / exposed	1 / 150 (0.67%)	0 / 151 (0.00%)	
occurrences (all)	1	0	
Septic encephalopathy			
subjects affected / exposed	1 / 150 (0.67%)	0 / 151 (0.00%)	
occurrences (all)	1	0	
Diverticulitis			

subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	
Abdominal infection subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Metabolism and nutrition disorders			
Hypoglycaemia subjects affected / exposed occurrences (all)	0 / 150 (0.00%) 0	1 / 151 (0.66%) 1	
Hypernatraemia subjects affected / exposed occurrences (all)	1 / 150 (0.67%) 1	0 / 151 (0.00%) 0	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 March 2017	BfArM and EC requested the following clarifications were made : <ul style="list-style-type: none">• Use of gas monitor and elimination system with AnaConDa• That warnings, contraindications and interactions in SmPC for applicable investigational product must be followed• ICF procedure• Randomisation stratified by site• Adding creatine kinase lab test• Adding an independent data safety monitoring board
19 May 2017	The following changes were made due to clarifications, change of details and removal of inconsistencies: <ul style="list-style-type: none">• Adding methodology section in synopsis• Change of biostatistician• Clarification of wordings of objectives and endpoints• Administrative changes to clarify inconsistencies and order of study procedures• Clarification of wordings of incl/excl criteria• Clarification on replacement for withdrawn subjects• Clarification on blinding procedures• Clarification of rescue sedation and sedation failure• Modification of procedure after surgery or anaesthesia• Corrections/clarifications on vital signs, ventilator parameters and concomitant meds to be collected• Modification of SBT procedure• Adding collection of data for extubation• Change of follow-up adverse event and concomitant medication data collection• Clarifications in statistical methods
24 June 2018	The following changes were made: <ul style="list-style-type: none">• Extending safety follow-up to include seven days of organ systems function and 30 days mortality and health economy in terms of days in ICU and days with invasive ventilation.• Adding secondary objectives and endpoints related to the extended follow-up of organ function, mortality and health economy• Clarifying informed consent procedure and the emergency situation• Adding the AnaConDa-S device to be used for isoflurane administration• Changing sponsor representative• Correcting errors and clarifying inconsistencies
27 March 2019	To reduce number of secondary objectives and endpoints and for clarifications and removal of inconsistencies the following changes were made: <ul style="list-style-type: none">• Re-structuring of objectives and endpoints• Clarifications in Table 1, Study plan• Clarification of exclusion criteria 5, 6 and 13• Clarification of concomitant medication/prohibited medication section.• Clarification of AE collection timeframes• Adding written consent or putative consent for collection of 30 day f/u data for subjects included before amendment 3• Changing Last Subject completed to Q1 2020

09 December 2019	For clarification the following updates were made: <ul style="list-style-type: none"> • Restructuring of objectives • Ordering of secondary safety endpoints • Repositioning of endpoints
------------------	--

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
