

Clinical trial results:

AURORA: A Phase 3, Multicenter, Randomized, Double-Blind, Placebo-Controlled Study to Evaluate the Efficacy and Safety of Cenicriviroc for the Treatment of Liver Fibrosis in Adult Subjects With Nonalcoholic Steatohepatitis

Summary

EudraCT number	2016-004566-26
Trial protocol	BE PT AT ES HU GB PL SI GR LV IT RO
Global end of trial date	09 March 2021

Results information

Result version number	v1
This version publication date	20 January 2022
First version publication date	20 January 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 March 2021
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	09 March 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The AURORA study was conducted to confirm the efficacy and safety of cenicriviroc (CVC) for the treatment of liver fibrosis in adult participants with Nonalcoholic Steatohepatitis (NASH).

Protection of trial subjects:

All study participants were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 April 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Norway: 4
Country: Number of subjects enrolled	Poland: 101
Country: Number of subjects enrolled	Portugal: 7
Country: Number of subjects enrolled	Spain: 35
Country: Number of subjects enrolled	United Kingdom: 42
Country: Number of subjects enrolled	Austria: 8
Country: Number of subjects enrolled	Belgium: 16
Country: Number of subjects enrolled	France: 48
Country: Number of subjects enrolled	Germany: 30
Country: Number of subjects enrolled	Greece: 3
Country: Number of subjects enrolled	Hungary: 8
Country: Number of subjects enrolled	Italy: 16
Country: Number of subjects enrolled	Latvia: 1
Country: Number of subjects enrolled	Romania: 2
Country: Number of subjects enrolled	Australia: 28
Country: Number of subjects enrolled	Brazil: 22
Country: Number of subjects enrolled	Canada: 27
Country: Number of subjects enrolled	Chile: 3
Country: Number of subjects enrolled	Hong Kong: 13
Country: Number of subjects enrolled	Israel: 29
Country: Number of subjects enrolled	Mexico: 25
Country: Number of subjects enrolled	New Zealand: 7

Country: Number of subjects enrolled	Russian Federation: 5
Country: Number of subjects enrolled	Singapore: 1
Country: Number of subjects enrolled	Switzerland: 6
Country: Number of subjects enrolled	Taiwan: 6
Country: Number of subjects enrolled	United States: 1285
Worldwide total number of subjects	1778
EEA total number of subjects	279

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1373
From 65 to 84 years	405
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

1778 participants were randomized of which 1769 received treatment; 1293 participated in Part 1. The study was terminated early, and Part 2 did not enroll the planned number of participants. Therefore, Part 1 and Part 2 data were combined and reported as the Full Study Cohort for reporting of the Part 2 efficacy endpoints and the safety endpoints.

Pre-assignment period milestones

Number of subjects started	1778
Number of subjects completed	1769

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Did Not Receive Study Drug: 9
----------------------------	-------------------------------

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo
------------------	---------

Arm description:

Participants received cenicriviroc placebo-matching, tablet, orally, once daily for up to approximately 40 months.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Cenicriviroc placebo-matching, tablet, orally, once daily for up to approximately 40 months.

Arm title	Cenicriviroc 150 mg
------------------	---------------------

Arm description:

Participants received cenicriviroc, 150 milligrams (mg), tablet, orally, once daily for up to approximately 40 months.

Arm type	Experimental
Investigational medicinal product name	Cenicriviroc
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Cenicriviroc, 150 mg, tablet, orally, once daily for up to approximately 40 months.

Number of subjects in period 1^[1]	Placebo	Cenicriviroc 150 mg
Started	589	1180
Participated in Part 1	432	861
Part 1: Received Study Drug	429	859
Completed	0	0
Not completed	589	1180
Physician decision	4	11
Non-compliance with Study Drug	-	2
Adverse Event	8	26
Protocol-specified Withdrawal Criteria Met	27	55
Withdrawal by Subject	48	101
Protocol Violation	4	8
Study Terminated by Sponsor	467	917
Lost to follow-up	30	54
Reason not Specified	1	5
Lack of efficacy	-	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline measures are based on the Safety Population.

Baseline characteristics

Reporting groups

Reporting group title	Placebo

End points

End points reporting groups

Reporting group title	Placebo
Reporting group description: Participants received cenicriviroc placebo-matching, tablet, orally, once daily for up to approximately 40 months.	
Reporting group title	Cenicriviroc 150 mg
Reporting group description: Participants received cenicriviroc, 150 milligrams (mg), tablet, orally, once daily for up to approximately 40 months.	

Primary: Percentage of Participants With Improvement in Fibrosis by at Least 2 Stages and No Worsening of Steatohepatitis on Liver Biopsy at Month 12 in the Full Study Cohort

End point title	Percentage of Participants With Improvement in Fibrosis by at Least 2 Stages and No Worsening of Steatohepatitis on Liver Biopsy at Month 12 in the Full Study Cohort ^[1]
End point description: Fibrosis stage was evaluated using the NASH CRN Fibrosis Staging System with stages: 0=none; 1=perisinusoidal or periportal; 1A=mild, zone 3, perisinusoidal; 1B=moderate, zone 3, perisinusoidal; 1C=portal/periportal; 2=perisinusoidal and portal/periportal; 3=bridging fibrosis; 4=cirrhosis. No worsening of steatohepatitis was defined as no worsening of lobular inflammation or hepatocellular ballooning grade as per scoring in relevant NAS categories. NAS is a semiquantitative scoring system based on the unweighted sum of: steatosis (0=<5% to 3=>66%), lobular inflammation (0=no foci to 3=>4 foci/200x), and hepatocellular ballooning (0=none to 2=many cells/prominent ballooning) scores. Improvement in fibrosis is a decrease in the NASH CRN fibrosis stage. mITT Population for the full study cohort included participants randomly assigned to a treatment group who received at least one dose of study drug for Parts 1 and 2 of the study combined.	
End point type	Primary
End point timeframe: Month 12	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive statistical analysis was planned to be reported for this endpoint.

Secondary: Percentage of Participants With Improvement in Fibrosis by at Least 2 Stages and No Worsening of Steatohepatitis on Liver Biopsy at Month 60 in the Full Study Cohort

End point title	Percentage of Participants With Improvement in Fibrosis by at Least 2 Stages and No Worsening of Steatohepatitis on Liver Biopsy at Month 60 in the Full Study Cohort
-----------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------

End point description:

Fibrosis stage was evaluated using the NASH CRN Fibrosis Staging System with stages: 0=none; 1=perisinusoidal or periportal; 1A=mild, zone 3, perisinusoidal; 1B=moderate, zone 3, perisinusoidal; 1C=portal/periportal; 2=perisinusoidal and portal/periportal; 3=bridging fibrosis; 4=cirrhosis. No worsening of steatohepatitis was defined as no worsening of lobular inflammation or hepatocellular ballooning grade as per scoring in relevant NAS categories. NAS is a semiquantitative scoring system based on the unweighted sum of: steatosis (0=<5% to 3=>66%), lobular inflammation (0=no foci to 3=>4 foci/200x), and hepatocellular ballooning (0=none to 2=many cells/prominent ballooning) scores. Improvement in fibrosis is a decrease in the NASH CRN fibrosis stage. No data was collected as the study was terminated and no participants reached the Month 60 timepoint.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose through 30 days after the last dose of study drug (Up to approximately 42 months)

Adverse event reporting additional description:

All-cause Mortality: All enrolled participants. Serious Adverse Events and Other Adverse Events: Safety Population for the full study cohort included participants who received at least one dose of study drug in Parts 1 and 2 of the study combined.

Assessment type	Systematic

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: Number of participants exposed in each arm is based on the male population.

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: Number of participants exposed in each arm is based on the female population.

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: Number of participants exposed in each arm is based on the female population.

[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: Number of participants exposed in each arm is based on the female population.

[5] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: Number of participants exposed in each arm is based on the male population.

[6] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: Number of participants exposed in each arm is based on the female population.

[7] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: Number of participants exposed in each arm is based on the female population.

[8] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: Number of participants exposed in each arm is based on the female population.

[9] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: Number of participants exposed in each arm is based on the male population.

[10] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: Number of participants exposed in each arm is based on the female population.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 May 2017	The following changes were implemented with Amendment 1: Revised program name from STELLARIS to AURORA. Modified Exclusion Criterion (aspartate aminotransferase [AST] criterion). Modified Exclusion Criterion (alanine aminotransferase [ALT] criterion). Revised timing of the Screening Visit relative to the Baseline Visit. Added hemoglobin A1c assessment to Screening Visit (Part 1 and Part 2). Added storage of plasma and serum samples to Screening Visit (Part 1 and Part 2). Added to study procedures the Short Form Healthy Survey—Version 2 (SF-36v2) questionnaire and its associated quality of life (QoL) evaluation. Removed from study procedures the Modified Medication Adherence Self-report Inventory (M-MASRI) questionnaire and clarified assessment of treatment adherence. Added fasting requirement prior to assessment of liver stiffness. Updated the number of subjects exposed to cenicriviroc (CVC). Modified concomitant use of p-glycoprotein (P-gp) inhibitors. Updated the list of allowed and disallowed concomitant medications. Updated the total blood volume collection. Clarified instructions for completion of all other study visits for subjects who permanently discontinue study drug. Clarified timing of study drug dosing. Added serum hepatic fibrosis indices and moderate end stage liver disease (MELD) score details to Appendix—Clinical Laboratory Tests. Added text for clarification and content-oriented changes were made.
29 June 2017	The following changes were implemented with Amendment 2: Correction made to disallowed supplementation with high-dose vitamin E. Removed requirement pertaining to counseling regarding prolonged ultraviolet (UV) exposure. Removed hepatitis B core antibody test from screening assessments. Added estimated glomerular filtration rate (eGFR) determinations to specified blood draw determinations. Revised Day 1 blood draw determinations to include hepatitis B core antibody (HBcAb) and hepatitis B surface antibody (HBsAb) titer. Clarified use of antiviral medications, opioids, and sedatives/hypnotics for disallowed medications. Provided updated version of the Work Productivity and Activity Impairment Questionnaire: Nonalcoholic Steatohepatitis for Fatty Liver questionnaire. Added text for clarification and content-oriented changes were made.
10 April 2018	The following changes were implemented with Amendment 3: Added adverse events of special interest (AESI) to types of reportable events. Added key secondary objective, secondary objectives, and exploratory objectives for Part 1. Revised the approximate number of participants to be randomized in Part 1 and participants randomized in Part 1 that will be included in Part 2 from 1000 participants to 1200. Increased the number of unique participants across Parts 1 and 2 from which adjudicated events were to be accrued before study termination from 240 to 367. Revised the number of participants to be randomized into Arms A and B of Part 1 from 667 to 800 and from 333 to 400, respectively and the number of participants to be newly randomized into Arms A and B of Part 2 from 667 to 534 and from 333 to 266, respectively. Increased the number of study centers from approximately 300 to up to 425. Revised the text to indicate that study drug (CVC or placebo) must be taken once daily with food. Added key secondary efficacy endpoint, secondary efficacy endpoint and exploratory efficacy endpoint for Part 1. Removed time to first occurrence of hepatocellular carcinoma (HCC) as a primary endpoint for Part 2. Safety analysis was updated to include major adverse cardiovascular events and new-onset type 2 diabetes mellitus (T2DM). Revised the definitions for intent-to-treat (ITT) and modified ITT (mITT) analysis sets. Revised the timing for the primary analysis of Part 1 to occur when approximately 1200 randomized participants had been followed for at least 12 months. Statistical significance levels for testing of the primary endpoints in Part 1 and 2 were updated. Statistical analysis was updated to reflect the testing hierarchy for the newly added key secondary endpoint. Testing methodology for the key secondary endpoint in Part 1 was added.

10 April 2018	Updated the number of participants exposed to CVC in the clinical development program. Added summaries of pharmacokinetic (PK) and safety data from studies 3152-101-002 and 3152-107-002. Updated the summary of data from the Phase 2b study (CENTAUR; Study 652-2-203 (NCT03059446)) based on the final Year 2 results. Added the definitions for treatment-emergent adverse events and for AESI. Changed the timing for collection of one sample for population PK analysis at Month 6 in Part 1. Revised the list of disallowed medications to allow for coadministration of P-gp inhibitors with CVC. Added text for clarification and content-oriented changes were made.
25 April 2019	The following changes were implemented with Amendment 4: Increased duration of 8 weeks for timing of Screening visit to 3 months to facilitate enrolment and all instances of "weeks" was changed to "months". Updated emergency contact and serious adverse event (SAE) reporting information. Increased number of sites from 425 up to 600. Updated exposure data. Added details regarding Study 652-1-121 (NCT02120547) and 3152-102-002 (NCT03376841). Updated results for year 2 CENTAUR study 652-2-203 (NCT03059446) based on final clinical study report (CSR). Added details regarding newly randomized Stage 3 participants in Part 2. Redefined primary efficacy objective and endpoint for Part 1. Reorganized secondary efficacy objectives for Part 2. Modified inclusion/exclusion criterias. Added details regarding disallowed medication use and antidiabetic agents and washout period. Added details regarding newly randomized participants in Part 1 and 2. Added description of patient-reported outcomes (PRO) assessment via electronic tablet. Added subgroup analysis text regarding change from Baseline to Month 12 in Enhanced Liver Fibrosis (ELF) score. Added text relevant to European Union (EU) requirement: ...European Union Data Protection Directive 95/46/EC). Added text regarding role and responsibilities of the study monitor. Text was revised to address concerns from specific country health authorities but which the sponsor determined could be applicable to all countries. Added text for clarification and content-oriented changes were made.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
09 March 2021	This study was terminated early due to lack of efficacy based on the results of the planned interim analysis of Part 1 data.	-

Notes:

Limitations and caveats

None reported
