

## Clinical trial results:

### Evaluation of the safety of CEdiranib in the prevention of Bowel perforation in platinum-resistant Ovarian Cancer

#### Summary

EudraCT number	2016-004618-93
Trial protocol	GB
Global end of trial date	23 July 2024

#### Results information

Result version number	v1 (current)
This version publication date	20 March 2025
First version publication date	20 March 2025
Summary attachment (see zip file)	CEBOC (Once_daily_cediranib_and_weekl.pdf)

#### Trial information

##### Trial identification

Sponsor protocol code	R120502
-----------------------	---------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	U1111-1200-5948

Notes:

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 June 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 May 2022
Global end of trial reached?	Yes
Global end of trial date	23 July 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The trial is trying to find out if it is safe to treat women who have advanced ovarian cancer and are at risk of developing malignant bowel obstruction (bowel blockage due to advanced cancer) with a weekly dose of standard chemotherapy (paclitaxel) plus a new oral tablet medication (cediranib).

Protection of trial subjects:

The trial would stop if:

- More than 1 patient experienced an event (bowel perforation/ fistula) in stage 1

OR:

- Three (03) or more participants experienced an event at any point in the trial

The trial may also be terminated for other safety reasons if recommended by the IDMC and agreed by the TSC.

Background therapy:

Not applicable

Evidence for comparator:

Not applicable (single-arm)

Actual start date of recruitment	27 November 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 30
Worldwide total number of subjects	30
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	17
From 65 to 84 years	12
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details:

Recruited started March 2018 and ended February 2021

### Pre-assignment

Screening details:

Prior to paclitaxel/nab-paclitaxel and cediranib: Histologically confirmed, progressive, platinum-resistant or refractory, high-grade ovarian, fallopian tube or primary peritoneal cancer for which weekly paclitaxel or nab-paclitaxel would be a potential treatment option. Prior to cediranib and olaparib Radiological evidence of PD

### Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Not applicable

### Arms

Arm title	Paclitaxel +/- cediranib
-----------	--------------------------

Arm description:

This is a single arm, phase II trial of cediranib 20mg/day with weekly paclitaxel 70mg/m2/week in patients with recurrent platinum-resistant ovarian cancer and clinical and/or radiological features indicating an increased risk of developing subacute bowel obstruction. At the point of developing progressive disease (PD), participants cease paclitaxel and have the option of continuing cediranib 20mg/day with olaparib 300mg bd twice daily continuously until further PD occurs.

Arm type	Single arm
Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous drip use

Dosage and administration details:

Paclitaxel will be administered at a dose of 70mg/m2 on days 1, 8 and 15 of a 21-day cycle for a maximum of 6 cycles.

Investigational medicinal product name	Cediranib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

20 mg daily. Maintenance cediranib will start up to 9 weeks after cycle 1 day 1 of weekly paclitaxel. Cediranib can be initiated when bowel symptoms have abated to grade 1 or less or the risk to the patient's bowel has been minimised. Participants will be given one bottle containing 35 tablets. Further cediranib may be dispensed mid-cycle if necessary, to manage dose reductions. Within each bottle all tablets will be the same strength (either 20 mg or 15 mg).

Investigational medicinal product name	Olaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

**Dosage and administration details:**

The olaparib trial treatment will be dispensed to patients for a dose of 300 mg twice daily equivalent to a total daily dose of 600 mg which is equivalent to the 400 mg capsules twice daily dose<sup>16</sup>. The 100 mg and 150 mg tablets will be used to manage dose reductions. On the first day of each 21-day cycle, participants will be given three bottles each containing 32 tablets. Further olaparib may be dispensed mid-cycle if necessary, to manage dose reductions. Within each bottle all tablets will be the same strength (either 100 mg or 150 mg).

<b>Number of subjects in period 1</b>	Paclitaxel +/- cediranib
Started	30
Completed	30

**Period 2**

Period 2 title	Cediranib treatment
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

**Arms**

<b>Arm title</b>	Paclitaxel +/- cediranib
------------------	--------------------------

**Arm description:**

This is a single arm, phase II trial of cediranib 20mg/day with weekly paclitaxel 70mg/m<sup>2</sup>/week in patients with recurrent platinum-resistant ovarian cancer and clinical and/or radiological features indicating an increased risk of developing subacute bowel obstruction. At the point of developing progressive disease (PD), participants cease paclitaxel and have the option of continuing cediranib 20mg/day with olaparib 300mg bd twice daily continuously until further PD occurs.

### Primary: Grade III-V gastrointestinal perforation or fistula

End point title	Grade III-V gastrointestinal perforation or fistula <sup>[1]</sup>
-----------------	--

End point description:

End point type	Primary
----------------	---------

End point timeframe:

During treatment with cediranib

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The primary endpoint was summarised as the proportion of patients with objective response with an exact 95% confidence interval in the ITT population. No statistical test was performed as this was primarily a safety trial.

End point values	Paclitaxel +/- cediranib			
Subject group type	Reporting group			
Number of subjects analysed	17 <sup>[2]</sup>			
Units: Subjects				
Yes	0			
No	17			

Notes:

[2] - 17 patients started treatment with cediranib. Two started in cycle 1 and the rest following paclitax

### Statistical analyses

No statistical analyses for this end point
