Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 November 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	26 November 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main aim of this study was to learn if ixazomib, given with dexamethasone, stops the cancer from getting worse in people with relapsed or refractory multiple myeloma. It was compared to another medicine called pomalidomide, given with dexamethasone with people with the same condition.

Protection of trial subjects:

All study participants were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 August 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Ireland: 9
Country: Number of subjects enrolled	Turkey: 7
Country: Number of subjects enrolled	Spain: 6
Country: Number of subjects enrolled	Israel: 5
Country: Number of subjects enrolled	Czechia: 4
Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	Greece: 3
Country: Number of subjects enrolled	Sweden: 3
Country: Number of subjects enrolled	Australia: 10
Country: Number of subjects enrolled	Russian Federation: 23
Country: Number of subjects enrolled	Norway: 15
Country: Number of subjects enrolled	Italy: 14
Country: Number of subjects enrolled	France: 12
Worldwide total number of subjects	122
EEA total number of subjects	77

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	31
From 65 to 84 years	88
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

Participants took part in the study at 54 investigative sites in Australia, Turkey, Czech Republic, France, Germany, Italy, Netherlands, Norway, Spain, Israel, United Kingdom, Sweden, Greece, and Russian Federation from 01 August 2017 up to 26 November 2021.

Pre-assignment

Screening details:

Participants with a diagnosis of relapsed and/or refractory multiple myeloma (RRMM) who received at least 2 prior lines of therapy were enrolled in 2:3 ratio to receive pomalidomide + dexamethasone or ixazomib + dexamethasone in this study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Pomalidomide 4 mg + Dexamethasone 40 mg

Arm description:

Pomalidomide 4 mg, capsules, orally, once daily on Days 1 to 21 of each 28-day cycle, plus dexamethasone 40 mg, (or 20 mg if participant is aged ≥ 75 years), tablets, orally, once daily on Days 1, 8, 15, and 22 of each 28-day cycle until disease progression, unacceptable toxicity, withdrawal of consent, or sponsor termination of study up to 2 years.

Arm type	Active comparator
Investigational medicinal product name	Pomalidomide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Pomalidomide capsules

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Dexamethasone tablets

Arm title	Ixazomib 4 mg + Dexamethasone 20 mg
------------------	-------------------------------------

Arm description:

Ixazomib 4 mg as starting dose, capsules, orally, once daily on Days 1, 8, and 15 of each 28-day cycle, with escalation to 5.5 mg at the start of Cycle 2 for participants who tolerated the 4 mg dose in Cycle 1, plus dexamethasone 20 mg (or 10 mg if participant is aged ≥ 75 years), tablets, orally, once daily on Days 1, 2, 8, 9, 15, 16, 22, and 23 of every 28-day cycle until disease progression, unacceptable toxicity, withdrawal of consent, or sponsor termination of study up to 2 years.

Arm type	Experimental

Statistical analyses

Statistical analysis title	Statistical Analysis for OS
Comparison groups	Pomalidomide 4 mg + Dexamethasone 40 mg v Ixazomib 4 mg + Dexamethasone 20 mg

Number of subjects included in analysis	122
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	= 0.265
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	1.427
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.761
upper limit	2.677

Notes:

[1] - HR obtained by unadjusted Cox's proportional hazard regression model stratified by age, ISS and prior lines of therapy. HR <1 was deemed to indicate longer survival time in Ixazomib + Dexamethasone arm as compared to Pomalidomide + Dexamethasone arm.

Secondary: Percentage of Participants with Overall Response

End point title	Percentage of Participants with Overall Response
-----------------	--

End point description:

Overall Response Rate(ORR) was defined as the percentage of participants who achieved partial response(PR), very good partial response(VGPR), or complete response(CR) based on laboratory results and IRC assessment using modified IMWG criteria. PR: $\geq 50\%$ reduction of serum M protein+reduction in 24-hour urinary M protein by $\geq 90\%$ or to <200 mg/24-hour; if M protein is not measurable, $\geq 50\%$ decrease in difference between involved and uninvolved FLC levels is required; if not measurable by FLC, $\geq 50\%$ reduction in bone marrow plasma cells, when baseline value $\geq 30\%$ and; if present at baseline, $\geq 50\%$ reduction in size of soft tissue plasmacytomas is required. VGPR: serum and urine M-protein detectable by immunofixation but not on electrophoresis or $\geq 90\%$ reduction in serum M-protein+urine M-protein level <100 mg/24-hour. CR: negative immunofixation on serum+urine; disappearance of soft tissue plasmacytomas; $<5\%$ plasma cells in bone marrow. ITT Population: all participants who were randomised.

End point type	Secondary
----------------	-----------

End point timeframe:

Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.83
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.506
upper limit	1.361

Notes:

[4] - HR: obtained by unadjusted Cox's proportional hazard regression model stratified by age,ISS,prior lines of therapy. HR<1 was deemed to indicate better disease progression prevention in Ixazomib+Dexamethasone arm over Pomalidomide+Dexamethasone arm.

Secondary: Health-Related Quality of Life (HRQOL) Based on European Organization for Research and Treatment of Cancer (EORTC) Quality of Life Questionnaire- Core 30 (EORTC QLQ-C30) Physical Domain Score

End point title	Health-Related Quality of Life (HRQOL) Based on European Organization for Research and Treatment of Cancer (EORTC) Quality of Life Questionnaire- Core 30 (EORTC QLQ-C30) Physical Domain Score
-----------------	---

End point description:

The EORTC QLQ-C30 contains 30 items across 5 functional scales (physical, role, cognitive, emotional, and social), 9 symptom scales (fatigue, nausea and vomiting, pain, dyspnea, sleep disturbance, appetite loss, constipation, diarrhea, and financial difficulties) and a global health status/quality of life (QOL) scale. The physical domain consisted of 5 items covering participant's daily physical activities on a scale from 1 (not at all) to 4 (very much). Raw scores were linearly transformed to a total score between 0-100, with a high score indicating better physical functioning. ITT PRO Population included participants with a measurement at study entry and at least one post study entry measurement for at least 1 subscale on all 3 questionnaires (EORTC QLQ-C30, EORTC Multiple Myeloma Module 20 [QLQ-MY20] and EuroQol 5-Dimensional Health Questionnaire [EQ-5D-5L]). 'n' indicates number analysed are the number of participants with data available for analyses at the given timepoint.

End point type	Secondary

Secondary: HRQOL Based on EORTC Multiple Myeloma Module 20 (EORTC QLQ-MY20) Score

End point title	HRQOL Based on EORTC Multiple Myeloma Module 20 (EORTC QLQ-MY20) Score
-----------------	--

End point description:

The EORTC QLQ-MY20 has 20 items across 4 independent subscales, 2 symptoms scales (disease symptoms, side effects of treatment), and 2 functional subscales (body image, future perspective). Scores were averaged and transformed to 0-100 scale. Higher scores for the future perspective scale

indicate better perspective of the future, for the body image scale indicate better body image and for the disease symptoms scale indicate higher level of symptomatology. ITT PRO Population included participants with a measurement at study entry and at least one post study entry measurement for at least 1 subscale on all 3 questionnaires (EORTC QLQ-C30, EORTC QLQ-MY20 and EQ-5D-5L). 'n' indicates number analysed are the number of participants with data available for analyses at the given timepoint.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From signing of the informed consent up to 30 days after last dose of the study drug (Up to approximately 4 years 3 months)

Adverse event reporting additional description:

At each visit investigator had to document any occurrence of AEs, abnormal laboratory findings. Any event spontaneously reported by participant or observed by investigator was recorded, irrespective of relation to study treatment. All cause-mortality: all randomized participants (N=49,73). Serious+nonserious: Safety Population participants received ≥ 1 dose.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 September 2019	Amendment 5: Summary of changes: The primary purpose of this amendment was to make following changes: <ul style="list-style-type: none">- To conclude the study following the phase 2 portion of the study and not initiate the previously planned phase 3 portion of the study. This change in study design was in response to an assessment of the current landscape of myeloma treatments and a slower rate of efficacy event accumulation than projected in the original study design.- The testing strategy was updated to have a single study analysis, to occur when approximately 80 PFS events were observed, and, correspondingly, to update the PFS assumption and type I error control allocation.
31 August 2020	Amendment 6: Summary of changes: The primary purpose of this amendment was to make following changes: <ul style="list-style-type: none">- Modified the study assessments as the data cutoff date for the study analysis had been reached (31 May 2020).- Only participants who continued to demonstrate clinical benefit but who did not have other means of access to the study drugs continued on the study. Because no further formal statistical analyses were performed, only assessments contributing to long-term safety data were required. Most study assessments besides safety were discontinued to ease the burden of protocol-mandated assessments on participants. Added flexibility in study conduct in unavoidable circumstances (e.g., the COVID-19 pandemic).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
