Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 October 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	17 February 2023
Global end of trial reached?	Yes
Global end of trial date	17 February 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to be measured by the primary endpoint of ORR (based on investigator assessments). The ORR was based on investigator assessment using RECIST 1.1 of the TITAN-TCC regimen in untreated (1st line) and platinum-based pretreated (2nd and 3rd line) subjects with metastatic or surgically unresectable TCC

Protection of trial subjects:

This study was planned, analyzed and conducted according to the study protocol and in accordance with the International Conference on Harmonization (ICH) 'Guideline for Good Clinical Practice E6(R1)', CPMP/ICH/135/95, based on the principles of the Declaration of Helsinki (1964) and its October 1996 amendment (Somerset West, South Africa). The study was duly conducted in compliance with the German Arzneimittelgesetz (AMG; German Drug Law), and the corresponding Directive 2001/20/EC. Subjects were fully informed regarding all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 July 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 46
Country: Number of subjects enrolled	Germany: 123
Worldwide total number of subjects	169
EEA total number of subjects	169

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	57
From 65 to 84 years	112
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The first patient was recruited on 14-Jul-2017; last patient last visit was on 17-Feb-2023.

Recruitment of first-line patients was paused by the Sponsor on 25-Jan-2019 and definitively terminated on 06-Jan-2020.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1, 1st line

Arm description:

Patients who received 1st-line treatment under protocol version 3.0. Under this version, nivolumab was given at 3 mg/kg and ipilimumab at 1 mg/kg during the first boost treatment, and nivolumab at 1 mg/kg and ipilimumab at 3 mg/kg during the second boost treatment.

Of the 42 patients in this cohort, 14 continued nivo mono maintenance after induction, 17 received a first boost treatment, and 11 discontinued treatment. Of the 17 patients who received a first boost treatment, 6 could switch to nivo maintenance, 7 continued with a second boost treatment, and 4 discontinued treatment. Of the 7 patients who received a second boost treatment, 4 could switch to nivo maintenance, two discontinued treatment due to adverse events, and 1 was found immunotherapy resistant.

Arm type	Experimental
Investigational medicinal product name	Nivolumab 240 mg
Investigational medicinal product code	
Other name	Opdivo
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Nivolumab was administered at a fixed dose of 240 mg IV for four cycles of induction treatment (Q2W). Subsequently, tumor assessment according to RECIST 1.1 was carried out. In case of complete or partial remission, treatment at 240 mg Q2W was continued as maintenance treatment. In case of stable or progressive disease, treatment was switched to a 'boost' treatment of combined nivolumab and ipilimumab. If patients developed progressive disease at any time point during maintenance therapy, treatment was also switched to a 'boost' using combined nivolumab and ipilimumab.

Investigational medicinal product name	Nivolumab 3 mg/kg
Investigational medicinal product code	
Other name	Opdivo
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Nivolumab was administered at a dose of 3 mg/kg body weight during the first 'boost' treatment in cohort 1 for two cycles (Q2W) together with ipilimumab at 1 mg/kg. Subsequently, tumor assessment according to RECIST 1.1 was carried out. In case of complete or partial remission, treatment with nivolumab at 240 mg Q2W was continued as maintenance treatment. In case of stable or progressive disease, patients received a second 'boost' treatment.

Investigational medicinal product name	Ipilimumab 1 mg/kg
Investigational medicinal product code	
Other name	Yervoy

Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Ipilimumab was administered at a dose of 1 mg/kg body weight during the first 'boost' treatment in cohort 1 for two cycles (Q2W) together with nivolumab at 3 mg/kg. Subsequently, tumor assessment according to RECIST 1.1 was carried out. In case of complete or partial remission, treatment at 240 mg Q2W was continued as maintenance treatment. In case of stable or progressive disease, patients received a second 'boost' treatment.

Investigational medicinal product name	Nivolumab 1 mg/kg
Investigational medicinal product code	
Other name	Opdivo
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Nivolumab was administered at a dose of 1 mg/kg body weight during the second 'boost' treatment in cohort 1, and in both the first and the second 'boost' treatment in cohort 2 together with ipilimumab at 3 mg/kg. 'Boost' treatment was to be administered for two cycles (Q2W).

Subsequent tumor assessment according to RECIST 1.1 informed the next treatment. In case of complete or partial remission, treatment at 240 mg Q2W was continued as maintenance treatment. In case of stable or progressive disease, eligible patients received a second 'boost' treatment. Patients with stable disease and ineligible for further boosts treatment were also switched to nivolumab maintenance treatment at 240 mg fixed dose. Patients with progressive disease and ineligible for further 'boost' treatment were declared as immunotherapy resistant, and discontinued treatment within the study.

Investigational medicinal product name	Ipilimumab 3 mg/kg
Investigational medicinal product code	
Other name	Yervoy
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Ipilimumab was administered at a dose of 3 mg/kg body weight during the second 'boost' treatment in cohort 1, and in both the first and the second 'boost' treatment in cohort 2 together with nivolumab at 1 mg/kg. 'Boost' treatment was always administered for two cycles (Q2W).

Subsequent tumor assessment according to RECIST 1.1 informed the next treatment. In case of complete or partial remission, treatment at 240 mg Q2W was continued as maintenance treatment. In case of stable or progressive disease, eligible patients received a second 'boost' treatment. Patients with stable disease and ineligible for further boosts treatment were also switched to nivolumab maintenance treatment at 240 mg fixed dose. Patients with progressive disease and ineligible for further 'boost' treatment were declared as immunotherapy resistant, and discontinued treatment within the study.

Arm title	Cohort 1, 2nd/3rd line
------------------	------------------------

Arm description:

Patients who received 2nd or 3rd-line treatment under protocol version 3.0. Under this version, nivolumab was given at 3 mg/kg and ipilimumab at 1 mg/kg during the first boost treatment, and nivolumab at 1 mg/kg and ipilimumab at 3 mg/kg during the second boost treatment.

Of the 44 patients in this cohort, 10 continued nivo mono maintenance after induction, 23 received a first boost treatment, and 11 discontinued treatment. Of the 23 patients who received a first boost treatment, 1 could switch to nivo maintenance, 16 continued with a second boost treatment, and 6 discontinued treatment. Of the 16 patients who received a second boost treatment, 6 could switch to nivo maintenance, 6 discontinued treatment due to adverse events, death or other reasons, and 4 were found immunotherapy resistant.

Arm type	Experimental
Investigational medicinal product name	Nivolumab 240 mg

Statistical analyses

Statistical analysis title	Clopper-Pearson analysis of ORR
----------------------------	---------------------------------

Statistical analysis description:

For cohort 1 - 1st line, ORR was significantly better than pre-specified: Clopper-Pearson (exact) 90%CI 0.34–0.61 ($p < 0.001$, one-sided).

For cohort 1 - 2nd/3rd line, ORR was 27% ($n=12$; Clopper-Pearson [exact] 90%CI 0.17–0.40 ($p=0.15$, one-sided).

For cohort 2 - 1st/2nd/3rd line, ORR again was significantly better than pre-specified: Clopper-Pearson (exact) 90%CI 0.24–0.42 ($p=0.005$, one-sided).

Secondary: Overall survival (OS)

End point title	Overall survival (OS)
-----------------	-----------------------

End point description:

End point type	Secondary
----------------	-----------

End point timeframe:

OS was defined as the time from first dosing date to the date of death. A subject who had not died was censored at last known date alive.

End point values	Cohort 1, 1st line	Cohort 1, 2nd/3rd line	Cohort 2, 1st/2nd/3rd line	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	42	44	83	
Units: Months				
median (confidence interval 95%)	16.4 (7.3 to 28.5)	8.3 (5.3 to 19.3)	7.6 (5.0 to 14.9)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

SAE were to be collected that occur from first IMP administration until 100 days of IMP discontinuation. Moreover, investigators were to report any SAE occurring after these time periods believed to be related to IMP or protocol-specified procedures.

Assessment type	Non-systematic

Serious adverse events	CSP V3	CSP V4f	
Total subjects affected by serious adverse events			
subjects affected / exposed	77 / 86 (89.53%)	71 / 83 (85.54%)	
number of deaths (all causes)	60	53	
number of deaths resulting from adverse events	38	42	
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Lung adenocarcinoma			
subjects affected / exposed	0 / 86 (0.00%)	1 / 83 (1.20%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Metastases to liver			
subjects affected / exposed	2 / 86 (2.33%)	0 / 83 (0.00%)	
occurrences causally related to treatment / all	0 / 2	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Metastases to spine			
subjects affected / exposed	1 / 86 (1.16%)	0 / 83 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Myelodysplastic syndrome			

subjects affected / exposed	1 / 86 (1.16%)	0 / 83 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Tumor pain			
subjects affected / exposed	1 / 86 (1.16%)	2 / 83 (2.41%)	
occurrences causally related to treatment / all	0 / 1	0 / 2	
deaths causally related to treatment / all	0 / 0	0 / 0	
Tumor associated fever			
subjects affected / exposed	0 / 86 (0.00%)	1 / 83 (1.20%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Neoplasm progression			
subjects affected / exposed	24 / 86 (27.91%)	34 / 83 (40.96%)	
occurrences causally related to treatment / all	0 / 26	0 / 36	
deaths causally related to treatment / all	0 / 22	0 / 31	
Metastases to spinal cord			
subjects affected / exposed	1 / 86 (1.16%)	0 / 83 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Vascular disorders			
Hypertension			
subjects affected / exposed	1 / 86 (1.16%)	0 / 83 (0.00%)	
occurrences causally related to treatment / all	1 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Thrombosis			
subjects affected / exposed	0 / 86 (0.00%)	2 / 83 (2.41%)	
occurrences causally related to treatment / all	0 / 0	0 / 2	
deaths causally related to treatment / all	0 / 0	0 / 0	
Deep vein thrombosis			
subjects affected / exposed	1 / 86 (1.16%)	0 / 83 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Embolism			

subjects affected / exposed	0 / 86 (0.00%)	1 / 83 (1.20%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Peripheral arterial occlusive disease			
subjects affected / exposed	2 / 86 (2.33%)	0 / 83 (0.00%)	
occurrences causally related to treatment / all	0 / 2	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Surgical and medical procedures			
Elective surgery			
subjects affected / exposed	0 / 86 (0.00%)	1 / 83 (1.20%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Skin neoplasm excision			
subjects affected / exposed	0 / 86 (0.00%)	1 / 83 (1.20%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
General disorders and administration site conditions			
Chest pain			
subjects affected / exposed	1 / 86 (1.16%)	0 / 83 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Fatigue			
subjects affected / exposed	4 / 86 (4.65%)	1 / 83 (1.20%)	
occurrences causally related to treatment / all	3 / 4	1 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Gait disturbance			
subjects affected / exposed	0 / 86 (0.00%)	1 / 83 (1.20%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 1	
Impaired healing			
subjects affected / exposed	1 / 86 (1.16%)	0 / 83 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	

Mucosal inflammation			
subjects affected / exposed	1 / 86 (1.16%)	0 / 83 (0.00%)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 April 2019	In the initial version of the protocol, the two nivolumab/ipilimumab boost cycles used different dosing of the two IMPs: for the first boost (boost cycles 1 and 2), nivolumab was to be given at 3 mg/kg and ipilimumab at 1 mg/kg, while dosing was nivolumab at 1 mg/kg and ipilimumab at 3 mg/kg for the second boost (boost cycles 3 and 4). Following the publication of results of the Checkmate 032 study, the protocol was amended to change dosing for the first boost (cycles 1 and 2) to nivolumab at 1 mg/kg and ipilimumab at 3 mg/kg, thus applying the same dosing in all boost cycles, since this dosing pattern had shown better efficacy and only slightly higher toxicity in the Checkmate 032 study. Furthermore, the recruitment target was reduced from initially 250 participants to 225, and the recruitment period was extended.
07 April 2020	Following a recruitment stop for 1st-line patients due to safety concerns, an interim analysis, and feedback from the competent authority, recruitment of 1st-line patients was terminated and the termination implemented with this amendment. Target enrollment was updated to 190 participants, and the planned statistical analysis was adapted accordingly, implementing a statistical power of 85%.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
15 January 2019	Recruitment of 1st-line participants was paused by the sponsor as a results of the scheduled activities of the study's data monitoring committee (DMC). Upon a routine analysis that was based on 39 study participants, the DMC observed an unexpected accumulation of SAEs with fatal outcomes in the 1st-line cohort that occurred within 8 weeks of study inclusion. After the recruitment halt for 1st-line patients, an unplanned safety interim analysis was conducted that was based on 88 study participants. The DMC concluded that there were no unexpected safety risks and expressed no reservations about resuming the inclusion of first-line patients into the study. However, the sponsor's request to reopen the study to 1st-line participants was denied by the competent authority, and recruitment of 1st-line patients therefore terminated and implemented by protocol amendment.	-

Notes:

Limitations and caveats

None reported
