

## Clinical trial results: A Placebo-Controlled, Double-Blind Comparative Study of E2080 in Lennox-Gastaut Syndrome Patients

### Summary

EudraCT number	2016-004952-30
Trial protocol	Outside EU/EEA
Global end of trial date	12 August 2011

### Results information

Result version number	v1 (current)
This version publication date	21 February 2018
First version publication date	21 February 2018

### Trial information

#### Trial identification

Sponsor protocol code	E2080-J081-304
-----------------------	----------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01146951
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	Eisai Co., Ltd.
Sponsor organisation address	4-6-10 Koishikawa, Bunkyo-ku, Tokyo, Japan, 112-8088
Public contact	Customer Joy Department. EJ, Eisai Co., Ltd., Eisai Co., Ltd., 81(03) 3817-3700,
Scientific contact	Customer Joy Department. EJ, Eisai Co., Ltd., Eisai Co., Ltd., 81(03) 3817-3700,

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 August 2011
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 August 2011
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate that the efficacy of E2080 in percent change in tonic-atonic seizure frequency in participants with Lennox-Gastaut Syndrome (LGS) relative to placebo.

Protection of trial subjects:

This study was conducted in accordance with standard operating procedures (SOPs) of the sponsor (or designee), which are designed to ensure adherence to Good Clinical Practice (GCP) guidelines as required by the following:

- Principles of the World Medical Association Declaration of Helsinki (World Medical Association, 2008)
- International Council on Harmonisation (ICH) E6 Guideline for GCP (CPMP/ICH/135/95) of the European Agency for the Evaluation of Medicinal Products, Committee for Proprietary Medicinal Products, International Council for Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use
- Title 21 of the United States (US) Code of Federal Regulations (US 21 CFR) regarding clinical studies, including Part 50 and Part 56 concerning informed subject consent and Institutional Review Board (IRB) regulations and applicable sections of US 21 CFR Part 312
- European Good Clinical Practice Directive 2005/28/EC and Clinical Trial Directive 2001/20/EC for studies conducted within any European Union (EU) country. All suspected unexpected serious adverse reactions were reported, as required, to the Competent Authorities of all involved EU member states.
- Article 14, Paragraph 3, and Article 80-2 of the Pharmaceutical Affairs Law (Law No. 145, 1960) for studies conducted in Japan, in addition to Japan's GCP Subject Information and Informed Consent.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 June 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Japan: 58
Worldwide total number of subjects	58
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	23
Adolescents (12-17 years)	13
Adults (18-64 years)	22
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Of n= 66 who started Observation Period, 7 discontinued from study. Primary reasons were deviation of the inclusion/ exclusion criteria (n=5), untoward event before study treatment (n=1) & other (n=1). Of 59 participants, 58 were included in Full Analysis Set. 1 participant (E2080 group) was excluded due to inappropriate diagnosis of disease.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Rufinamide (E2080)

Arm description:

Rufinamide : Rufinamide tablets administered orally twice daily after breakfast and dinner. Treatment was divided into a Dose Titration Period (2 weeks) and a Dose Maintenance Period (10 weeks). As a general rule, the dose was increased by 1 step every 2 days until it reached the target maintenance dose determined by body weight at the start of the Observation Period.

Target maintenance dose:

15.0 - 30.0 kilograms (kg): 1000 milligrams/day (mg/day) (5 tablets each in the morning and evening)

30.1 - 50.0 kg: 1800 mg/day (4 tablets in the morning and 5 in the evening)

50.1 - 70.0 kg: 2400 mg/day (6 tablets each in the morning and evening)

>= 70.1 kg: 3200 mg/day (8 tablets each in the morning and evening)

Arm type	Experimental
Investigational medicinal product name	Rufinamide
Investigational medicinal product code	E2080
Other name	Banzel
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Rufinamide tablets administered orally twice daily after breakfast and dinner. Treatment was divided into a Dose Titration Period (2 weeks) and a Dose Maintenance Period (10 weeks). As a general rule, the dose was increased by 1 step every 2 days until it reached the target maintenance dose determined by body weight at the start of the Observation Period.

Target maintenance dose:

15.0 - 30.0 kg: 1000 mg/day (5 tablets each in the morning and evening)

30.1 - 50.0 kg: 1800 mg/day (4 tablets in the morning and 5 in the evening)

50.1 - 70.0 kg: 2400 mg/day (6 tablets each in the morning and evening)

>= 70.1 kg: 3200 mg/day (8 tablets each in the morning and evening)

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Placebo : Rufinamide Matching Placebo tablets administered orally twice daily after breakfast and dinner for a total of 12 weeks

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Rufinamide Matching Placebo tablets administered orally twice daily after breakfast and dinner for a total of 12 weeks.

<b>Number of subjects in period 1</b>	Rufinamide (E2080)	Placebo
Started	28	30
Completed	24	29
Not completed	4	1
Adverse event, non-fatal	4	1

## Baseline characteristics

### Reporting groups

Reporting group title	Rufinamide (E2080)
-----------------------	--------------------

Reporting group description:

Rufinamide : Rufinamide tablets administered orally twice daily after breakfast and dinner. Treatment was divided into a Dose Titration Period (2 weeks) and a Dose Maintenance Period (10 weeks). As a general rule, the dose was increased by 1 step every 2 days until it reached the target maintenance dose determined by body weight at the start of the Observation Period.

Target maintenance dose:

15.0 - 30.0 kilograms (kg): 1000 milligrams/day (mg/day) (5 tablets each in the morning and evening)

30.1 - 50.0 kg: 1800 mg/day (4 tablets in the morning and 5 in the evening)

50.1 - 70.0 kg: 2400 mg/day (6 tablets each in the morning and evening)

>= 70.1 kg: 3200 mg/day (8 tablets each in the morning and evening)

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Placebo : Rufinamide Matching Placebo tablets administered orally twice daily after breakfast and dinner for a total of 12 weeks

Reporting group values	Rufinamide (E2080)	Placebo	Total
Number of subjects	28	30	58
Age categorical			
Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	10	13	23
Adolescents (12-17 years)	6	7	13
Adults (18-64 years)	12	10	22
From 65-84 years	0	0	0
85 years and over	0	0	0
Age continuous			
One participant from the Rufinamide (E2080) group was excluded from the Full Analysis Set because of the inappropriate diagnosis of the disease, dropping the total number from 29 to 28 participants.			
Units: years			
arithmetic mean	16	13.9	
standard deviation	± 7.1	± 6.1	-
Gender categorical			
One subject from the Rufinamide (E2080) group was excluded from the FAS because of the inappropriate diagnosis of the disease, dropping the total number from 29 to 28 participants.			
Units: Subjects			
Female	11	11	22
Male	17	19	36

## End points

### End points reporting groups

### Primary: Percent Change in Tonic-Atonic Seizure Frequency from Baseline (Per 28 days)

End point title	Percent Change in Tonic-Atonic Seizure Frequency from Baseline (Per 28 days)
End point description:	
The sum of the frequencies of tonic seizures and atonic seizures was defined as the “tonic-atonic seizure frequency”. The percent change in tonic-atonic seizure frequency per 28 days was assessed. The percent change in tonic-atonic seizure frequency was calculated using the tonic-atonic seizure frequency per 28 days of the Observation Period as the baseline and the tonic-atonic seizure frequency per 28 days of the Treatment Period as the post-treatment value. Percentage change in tonic-atonic seizure frequency was calculated as follows: $[100 \times (\text{post-treatment value} - \text{baseline}) / \text{baseline}]$ . The frequency of epileptic seizures was recorded in the seizure diary by the recorder. Seizure frequency was counted based on the classification established by the International League Against Epilepsy (ILAE). The diary recorder monitored the participant and recorded the seizure diary in a consistent manner, and continued these practices throughout the study period. Full Analysis Set (FAS) was analyzed.	
End point type	Primary
End point timeframe:	
Baseline (28 day observational period) and End of Treatment (28 day treatment period)	

End point values	Rufinamide (E2080)	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	28	30		
Units: Percent Change				
median (full range (min-max))	-24.2 (-93.5 to 27.2)	-3.25 (-81.6 to 151.9)		

### Statistical analyses

<b>Statistical analysis title</b>	Analysis of seizure frequency
Comparison groups	Placebo v Rufinamide (E2080)
Number of subjects included in analysis	58
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.003
Method	Wilcoxon (Mann-Whitney)

upper limit	-17

## Secondary: Percentage change in the frequency of seizures other than tonic-atonic seizures (per 28 days)

End point title	Percentage change in the frequency of seizures other than tonic-atonic seizures (per 28 days)
-----------------	---

### End point description:

Percent change in the frequency of seizures other than tonic-atonic seizures (per 28 days) was calculated using the total seizure frequency per 28 days of the Observation Period as the baseline and the total seizure frequency per 28 days of the Treatment Period as the post-treatment value. Percentage change in total seizure frequency was calculated as follows:  $[100 \times (\text{post-treatment value} - \text{baseline}) / \text{baseline}]$ . Seizures analyzed other than tonic-atonic seizures included: Partial seizure freq. (frequency), Absence seizure, Atyp. (atypical) absence seizure, Myoclonic seizure, Clonic seizure, Tonic seizure, Tonic-clonic seizure, Atonic seizure, & Uncla. (unclassified) epileptic seizure. The frequency of epileptic seizures was recorded in the diary by the recorder. Seizure frequency was counted based on the classification established by the International League Against Epilepsy (ILAE). The diary recorder monitored the participant and recorded the seizure diary in a consistent manner.

End point type	Secondary
----------------	-----------

### End point timeframe:

Baseline (28 day observational period) and End of Treatment (28 day treatment period)

End point values	Rufinamide (E2080)	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	28	30		
Units: Percent change				
median (full range (min-max))				
Partial Seizure Freq. % Change (n=4,6)	-52.2 (-96.2 to -26.3)	4.5 (-28.2 to 35.9)		
Absence Seizure Freq. % Change (n=1,0)	3.4 (3.4 to 3.4)	0 (0 to 0)		
Atyp. Absence Seizure Freq. % Change (n=12,19)	-59 (-100 to 107.1)	-21.1 (-83.2 to 253.5)		
Myoclonic Seizure Freq. % Change (n=10,10)	-52.35 (-100 to 53.3)	6.6 (-46.1 to 270)		
Clonic Seizure Freq. % Change (n=1,0)	-81.2 (-81.2 to -81.2)	0 (0 to 0)		
Tonic Seizure Freq. % Change (n=28,28)	-24.2 (-92.6 to 42.8)	-3.6 (-83.8 to 274.8)		
Tonic-clonic Seizure Freq. % Change (n=2,10)	-57.35 (-100 to -14.7)	2.35 (-75.8 to 450)		
Atonic Seizure Freq. % Change (n=10,12)	-63.1 (-100 to 68.8)	-6.1 (-100 to 2195.7)		
Uncla. Epileptic Seizure Freq. % Change (n=1,0)	-88.7 (-88.7 to -88.7)	0 (0 to 0)

lower limit	-89.1
upper limit	10.8

**Secondary: Clinical Global Impression of Change (CGIC)**

End point title	Clinical Global Impression of Change (CGIC)
-----------------	---

End point description:

CGIC in participants with Lennox-Gastaut Syndrome relative to placebo was presented as number of participants in each category at the final assessment (last observation carried forward [LOCF]) & at Week 12 of the Treatment Period. The investigator assessed the CGIC by comparing the participants' condition during the 4 weeks immediately before the completion (or discontinuation [d/c]) of the Treatment Period to his/her condition during the 4-week Observation Period (for participants who d/c'd the study during the Treatment Period, the CGIC was assessed by comparing the participant's condition from the start to discontinuation of the study treatment to his/her condition during the 4-week Observation Period).

The CGIC was assessed according to the following 7-grade scale based on the frequency & severity of seizures, adverse events, and overall conditions of daily life.

Markedly improved, Improved, Slightly improved, Unchanged, Slightly worsened, Worsened, Markedly worsened.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to Week 12 of the treatment period

End point values	Rufinamide (E2080)	Placebo

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From date of first dose until date of last dose of study treatment, up to approximately 1 year 2 months

Adverse event reporting additional description:

Treatment-emergent adverse events and treatment-emergent serious adverse events were reported for the safety analysis set, which consisted of participants who registered for the Treatment Period and excludes participants who did not take study drug and those without any evaluable safety data after the start of study treatment.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 May 2010	<ul style="list-style-type: none"><li>• Description of the method for examining concomitant drugs was modified.</li><li>• Date and time of taking E2080 and concomitant AEDs immediately before blood sampling for plasma drug concentration measurements were deleted from the monitoring procedure.</li><li>• Explanation to the investigator and sub investigator was added.</li></ul>
05 July 2010	<ul style="list-style-type: none"><li>• Check for blinding of the study drug before packaging the study drug by the allocation manager was deleted.</li><li>• The study implementation structure of the sponsor and the responsible person were changed.</li><li>• Matters to be described in the CRF (postponement of dose increase or reduction, and increase in the interval of tapering) were deleted from the identification of the source data.</li></ul>
13 October 2010	<ul style="list-style-type: none"><li>• Phenobarbital (suppository) was added to rescue drugs for status epilepticus.</li><li>• The study implementation structure of the sponsor was changed.</li><li>• Monitors were changed.</li><li>• Responsible persons at the case registration center, emergency key code control center, and clinical research organization were changed.</li></ul>
11 April 2011	<ul style="list-style-type: none"><li>• The study implementation structure of the sponsor was changed.</li></ul>

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
