

## Clinical trial results:

**A phase II randomised, double-blind, placebo-controlled study to evaluate the efficacy, safety, and tolerability of orally administered BI 409306 during a 52-week treatment period as an early intervention in patients with attenuated psychosis syndrome**

### Summary

EudraCT number	2016-004973-42
Trial protocol	GB
Global end of trial date	07 April 2021

### Results information

Result version number	v2 (current)
This version publication date	23 September 2022
First version publication date	12 February 2022
Version creation reason	

### Trial information

#### Trial identification

Sponsor protocol code	1289.32
-----------------------	---------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03230097
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 June 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	17 March 2021
Global end of trial reached?	Yes
Global end of trial date	07 April 2021
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The objective of this study was to investigate the efficacy, safety, and tolerability of BI 409306 compared with placebo given for 52 weeks to patients with attenuated psychosis syndrome (APS). The study was designed to show superiority of BI 409306 over placebo in achieving remission from APS, as well as improvement in cognition and functional capacity.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct. Rescue medication was allowed for all subjects as required.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 October 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 45
Country: Number of subjects enrolled	China: 1
Country: Number of subjects enrolled	Canada: 4
Worldwide total number of subjects	50
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	5
Adults (18-64 years)	45

From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This was a randomised, placebo-controlled, double-blind, parallel group trial over 52 weeks. The patients were randomised to 1 of the 2 treatment groups at a ratio of 1:1. After completion of the treatment period, or following early discontinuation, patients were to complete a 4-weeks follow-up period.

### Pre-assignment

Screening details:

All subjects were screened for eligibility prior to participation in the trial. Subjects attended a specialist site which ensured that they (the subjects) strictly met all inclusion and none of the exclusion criteria. Subjects were not to be allocated to a treatment group if any of the entry criteria were violated.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Carer, Data analyst, Assessor, Subject

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	BI 409306

Arm description:

Patients meeting Diagnostic and Statistical Manual of Mental Disorders, 5th Edition (DSM-5) diagnostic criteria for attenuated psychosis syndrome (APS) per the Structured Interview for Psychosis-Risk Syndromes (SIPS) took 50 milligrams BI 409306, as a film-coated tablet, orally twice a day at approximately the same time every day in the morning and in the evening (approximately 12 hours apart) with or without food for 52 weeks.

Arm type	Experimental
Investigational medicinal product name	BI 409306
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

50 milligrams BI 409306, as a film-coated tablet, orally twice a day at approximately the same time every day in the morning and in the evening (approximately 12 hours apart) with or without food for 52 weeks.

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Patients meeting Diagnostic and Statistical Manual of Mental Disorders, 5th Edition (DSM-5) diagnostic criteria for attenuated psychosis syndrome (APS) per the Structured Interview for Psychosis-Risk Syndromes (SIPS) took placebo matching 50 milligrams BI 409306, as a film-coated tablet, orally twice a day at approximately the same time every day in the morning and in the evening (approximately 12 hours apart) with or without food for 52 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name

Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	0	0	0
Adolescents (12-17 years)	1	4	5
Adults (18-64 years)	23	22	45
From 65-84 years	0	0	0
85 years and over	0	0	0
Age Continuous			
The treated set (TS) includes all patients who were dispensed study medication and were documented to have taken at least one dose of investigational treatment.			
Units: years			
arithmetic mean	23.4	20.9	
standard deviation	± 4	± 3.8	-
Sex: Female, Male			
The treated set (TS) includes all patients who were dispensed study medication and were documented to have taken at least one dose of investigational treatment.			
Units: participants			
Female	12	13	25
Male	12	13	25
Race (NIH/OMB)			
The treated set (TS) includes all patients who were dispensed study medication and were documented to have taken at least one dose of investigational treatment.			
Units: Subjects			
American Indian or Alaska Native	0	0	0
Asian	2	2	4

Native Hawaiian or Other Pacific Islander	0	0	0
Black or African American	4	2	6
White	16	21	37
More than one race	1	1	2
Unknown or Not Reported	1	0	1
Ethnicity (NIH/OMB)			
The treated set (TS) includes all patients who were dispensed study medication and were documented to have taken at least one dose of investigational treatment.			
Units: Subjects			
Hispanic or Latino	5	2	7
Not Hispanic or Latino	19	24	43
Unknown or Not Reported	0	0	0
Schizophrenia Cognition Rating Scale (SCoRS) total score			
The SCoRS is a 20-item interview-based assessment of cognitive deficits and the degree to which they affect day-to-day functions. It collects information from a patient interview, interview with an informant (if available), and the administering clinician. Each of the 20 items of the SCoRS is rated on a 4-point scale (minimum score of 1 and maximum of 4). Higher ratings reflect a greater degree of impairment. The composite score will be the sum of the 20 items (minimum score of 20 and maximum of 80). TS.			
Units: Score on a scale			
arithmetic mean	36.333	36.462	
standard deviation	± 7.405	± 7.814	-
Brief Assessment of Cognition (BAC App) composite T score			
Brief Assessment of Cognition (BAC App) composite T score (averages five of the standardized scaled sub-test scores, token motor test score not included). The BACS consists of five tests assessing multiple domains of cognitive function: Verbal Memory, Digit Sequencing, Semantic and Letter Fluency, Symbol Coding, and Tower of London. A composite T score that is calculated using the five standardized scaled sub-test scores will be generated, larger T-score indicates better cognition. T-scores in the general population have a mean of 50 and standard deviation of 10.			
Units: Score on a scale			
arithmetic mean	52.417	49.308	
standard deviation	± 7.945	± 13.451	-
Positive Syndrome Scale (PANSS)			
The PANSS positive and negative symptom scales each have 7 items (the General Psychopathology Scale, not reported, 16 items). The patient is rated from 1 to 7 on the 30 different items based on the interview, as well as reports from an informant when possible. Total score is the sum of the score of the 30 items (min 30, max 210), subtotal are the sum of either the positive or negative scales (min 7, max 49), lower scores represent an improvement in schizophrenia symptoms. All patients who were dispensed and were documented to have taken at least one dose of investigational treatment.			
Units: Score on a scale			
arithmetic mean	16.0	14.5	
standard deviation	± 3.9	± 3.4	-
Negative Syndrome Scale (PANSS)			
The PANSS positive and negative symptom scales each have 7 items (the General Psychopathology Scale, not reported, 16 items). The patient is rated from 1 to 7 on the 30 different items based on the interview, as well as reports from an informant when possible. Total score is the sum of the score of the 30 items (min 30, max 210), subtotal are the sum of either the positive or negative scales (min 7, max 49), lower scores represent an improvement in schizophrenia symptoms. All patients who were dispensed and were documented to have taken at least one dose of investigational treatment.			
Units: Score on a scale			
arithmetic mean	14.4	13.4	
standard deviation	± 5.1	± 3.3	-
Positive and Negative Syndrome Scale (PANSS)			
The PANSS positive and negative symptom scales each have 7 items (the General Psychopathology Scale, not reported, 16 items). The patient is rated from 1 to 7 on the 30 different items based on the			

interview, as well as reports from an informant when possible. Total score is the sum of the score of the 30 items (min 30, max 210), subtotal are the sum of either the positive or negative scales (min 7, max 49), lower scores represent an improvement in schizophrenia symptoms. All patients who were dispensed and were documented to have taken at least one dose of investigational treatment.

Units: Score on a scale			
arithmetic mean	62.8	58.2	
standard deviation	± 12.5	± 11.0	-

## End points

### Primary: Incidence of remission from attenuated psychosis syndrome (APS) within a 52-week timeframe

End point title	Incidence of remission from attenuated psychosis syndrome (APS) within a 52-week timeframe
-----------------	--

End point description:

Incidence of remission from attenuated psychosis syndrome (APS) within a 52-week timeframe. The incidence rate per patient-years of remission from attenuated psychosis syndrome (APS) is reported. Remission from APS is defined as a score of <3 on all of the five Positive Symptom items of the Scale of Prodromal Symptoms (SOPS) and maintained until the end of treatment. The SOPS provides a 6-point scale (minimum of 0 and maximum of 6, higher score indicating worse symptoms) to quantitatively rate the severity of five attenuated positive symptoms.

Full Analysis Set (FAS): All patients who were dispensed study medication and were documented to have taken at least one dose of investigational treatment and who have analysable data (observed or imputed) in at least one efficacy endpoint.

Reporting group description:

Patients meeting Diagnostic and Statistical Manual of Mental Disorders, 5th Edition (DSM-5) diagnostic criteria for attenuated psychosis syndrome (APS) per the Structured Interview for Psychosis-Risk Syndromes (SIPS) took 50 milligrams BI 409306, as a film-coated tablet, orally twice a day at approximately the same time every day in the morning and in the evening (approximately 12 hours apart) with or without food for 52 weeks.

<b>Serious adverse events</b>	Placebo	BI 409306	
Total subjects affected by serious adverse events			
subjects affected / exposed	2 / 26 (7.69%)	1 / 24 (4.17%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events	0	0	
Nervous system disorders			
Seizure			
subjects affected / exposed	1 / 26 (3.85%)	0 / 24 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Psychiatric disorders			
Suicidal behaviour			
subjects affected / exposed	1 / 26 (3.85%)	0 / 24 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Suicidal ideation			

subjects affected / exposed	0 / 26 (0.00%)	1 / 24 (4.17%)
occurrences causally related to treatment / all	0 / 0	0 / 1
deaths causally related to treatment / all	0 / 0	0 / 0

Frequency threshold for reporting non-serious adverse events: 5 %

<b>Non-serious adverse events</b>	Placebo	BI 409306
<b>Total subjects affected by non-serious adverse events</b>		
subjects affected / exposed	16 / 26 (61.54%)	21 / 24 (87.50%)
<b>Investigations</b>		
Blood creatine phosphokinase increased		
subjects affected / exposed	4 / 26 (15.38%)	0 / 24 (0.00%)
occurrences (all)	5	0
Weight increased		
subjects affected / exposed	2 / 26 (7.69%)	2 / 24 (8.33%)
occurrences (all)	2	2
<b>Injury, poisoning and procedural complications</b>		
Contusion		
subjects affected / exposed	3 / 26 (11.54%)	0 / 24 (0.00%)
occurrences (all)	3	0
Ligament sprain		
subjects affected / exposed	2 / 26 (7.69%)	1 / 24 (4.17%)
occurrences (all)	2	1
<b>Nervous system disorders</b>		
Dizziness		
subjects affected / exposed	1 / 26 (3.85%)	8 / 24 (33.33%)
occurrences (all)	1	10
Headache		
subjects affected / exposed	8 / 26 (30.77%)	5 / 24 (20.83%)
occurrences (all)	12	5
<b>Blood and lymphatic system disorders</b>		
Lymphadenopathy		
subjects affected / exposed	2 / 26 (7.69%)	0 / 24 (0.00%)
occurrences (all)	2	0
<b>General disorders and administration site conditions</b>		

Fatigue subjects affected / exposed occurrences (all)	2 / 26 (7.69%) 4	3 / 24 (12.50%) 3	
Pyrexia subjects affected / exposed occurrences (all)	2 / 26 (7.69%) 2	1 / 24 (4.17%) 2	
Eye disorders			
Dyschromatopsia subjects affected / exposed occurrences (all)	0 / 26 (0.00%) 0	3 / 24 (12.50%) 3	
Chromatopsia subjects affected / exposed occurrences (all)	0 / 26 (0.00%) 0	3 / 24 (12.50%) 3	
Photophobia subjects affected / exposed occurrences (all)	2 / 26 (7.69%) 2	8 / 24 (33.33%) 13	
Visual impairment subjects affected / exposed occurrences (all)	2 / 26 (7.69%) 2	5 / 24 (20.83%) 7	
Gastrointestinal disorders			
Diarrhoea subjects affected / exposed occurrences (all)	3 / 26 (11.54%) 3	2 / 24 (8.33%) 2	
Nausea subjects affected / exposed occurrences (all)	2 / 26 (7.69%) 3	2 / 24 (8.33%) 2	
Vomiting subjects affected / exposed occurrences (all)	5 / 26 (19.23%) 7	0 / 24 (0.00%) 0	
Respiratory, thoracic and mediastinal disorders			
Nasal congestion subjects affected / exposed occurrences (all)	4 / 26 (15.38%) 5	1 / 24 (4.17%) 1	
Rhinorrhoea subjects affected / exposed occurrences (all)	2 / 26 (7.69%) 2	1 / 24 (4.17%) 1	

Oropharyngeal pain subjects affected / exposed occurrences (all)	3 / 26 (11.54%) 4	0 / 24 (0.00%) 0	
Skin and subcutaneous tissue disorders Rash subjects affected / exposed occurrences (all)	2 / 26 (7.69%) 2	1 / 24 (4.17%) 1	
Psychiatric disorders Anxiety subjects affected / exposed occurrences (all)  Insomnia subjects affected / exposed occurrences (all)  Sleep disorder subjects affected / exposed occurrences (all)  Nightmare subjects affected / exposed occurrences (all)	2 / 26 (7.69%) 3  1 / 26 (3.85%) 1  2 / 26 (7.69%) 2  2 / 26 (7.69%) 2	3 / 24 (12.50%) 3  5 / 24 (20.83%) 6  0 / 24 (0.00%) 0  0 / 24 (0.00%) 0	
Musculoskeletal and connective tissue disorders Arthralgia subjects affected / exposed occurrences (all)	2 / 26 (7.69%) 4	1 / 24 (4.17%) 2	
Infections and infestations Upper respiratory tract infection subjects affected / exposed occurrences (all)  Sinusitis subjects affected / exposed occurrences (all)	0 / 26 (0.00%) 0  1 / 26 (3.85%) 1	2 / 24 (8.33%) 2  2 / 24 (8.33%) 2	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 May 2017	This amendment included the following major modifications or additions to the trial conduct: <ul style="list-style-type: none"><li>- Patients could be enrolled if they were taking antipsychotic medication during the screening period. If a patient discontinued an antipsychotic medication, they could be randomised 2 weeks after discontinuation</li><li>- Exclusion criteria were added to define stability of antipsychotic medication</li><li>- Close monitoring for potential trial drug abuse and/or diversion was introduced</li><li>- Structured Interview for Psychosis-Risk Syndromes (SIPS)/Scale of Prodromal Symptoms (SOPS) psychometric analyses were added</li><li>- Electroencephalogram/electroencephalography (EEG) paradigms were adapted to be compatible with the NAPLS2 EEG paradigms</li></ul>
10 July 2017	This amendment included the following addition to the exclusion criteria: <ul style="list-style-type: none"><li>- Patients with a history of moderate to severe hepatic impairment (Child-Pugh B/C) or moderate to severe renal impairment (Stage 3 to 5) were excluded from the trial</li></ul>
04 October 2018	This amendment included the following major modifications or additions to the trial conduct: <ul style="list-style-type: none"><li>- The primary endpoint was changed to time to remission from Attenuated psychosis syndrome (APS). Remission from APS was defined as a score of &lt;3 on all the P1-P5 Positive Symptom items of the SOPS and maintained until the end of treatment</li><li>- The original primary endpoint, time to first episode of psychosis as adjudicated by the Central Rating Committee, became a secondary endpoint</li><li>- Main diagnosis for trial entry was modified: a diagnosis of APS was defined by the presence of recent attenuated positive symptoms that meet all five DSM-5 criteria (A to E)</li><li>- Exclusion Criteria #2, #6, and 14 were clarified and Criterion #24 was added to exclude patients with hypersensitivity to the excipients in the Investigational medicinal product (IMP)</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
17 March 2020	Due to the COVID-19 pandemic, the recruitment of new subjects was temporarily discontinued. Ongoing, randomised patients were managed per Trial Protocol.	17 April 2020

Notes:

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The sponsor decided to prematurely stop enrollment. This decision was based on the unfortunate inability to meet expected enrolment goals, a situation made far worse by the impact of the COVID-19 pandemic.
