### **Primary: Phase 1: Number of participants with any treatment-emergent adverse event (TEAE)**

End point title	Phase 1: Number of participants with any treatment-emergent adverse event (TEAE) <sup>[1][2]</sup>
End point description: An adverse event (AE) was defined as any untoward medical occurrence associated with the use of a drug in humans, whether or not considered drug related, that occurred after a participant provided informed consent. Abnormal laboratory values or test results occurring after informed consent constituted AEs only if they induced clinical signs or symptoms, were considered clinically meaningful, required therapy (e.g., hematologic abnormality that required transfusion), or required changes in the study drug(s). A TEAE was defined as any AE either reported for the first time or the worsening of a pre-existing event after the first dose of study medication.

response of target lesions was evaluated from the percentage change in the sum of the diameters of the viable portions (portions enhanced during the arterial phase). CR: Disappearance of any intratumoral arterial enhancement during in target lesions, disappearance of all non-target lesions, and no appearance of any new lesions. PR:  $\geq 30\%$  of the sum of the diameters of viable portions (enhancement on arterial phase) of target lesions taking as reference the Baseline sum, no new lesions, and no progression of non-target lesions.

End point title	Phase 2: Number of Participants with any TEAE <sup>[52]</sup>
-----------------	---

End point description:

An AE was defined as any untoward medical occurrence associated with the use of a drug in humans, whether or not considered drug related, that occurred after a participant provided informed consent. Abnormal laboratory values or test results occurring after informed consent constituted AEs only if they induced clinical signs or symptoms, were considered clinically meaningful, required therapy (e.g., hematologic abnormality that required transfusion), or required changes in the study drug(s). A TEAE was defined as any AE either reported for the first time or the worsening of a pre-existing event after the first dose of study medication.
