Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001722-PIP01-14
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 May 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 December 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety and tolerability of eteplirsen in subjects with Duchenne muscular dystrophy (DMD) between 4 and 6 years of age who are amenable to exon 51 skipping.

Protection of trial subjects:

Written informed consent from each patient or patient's parent(s) or legal guardian(s), if applicable, and written assent from each patient, if applicable, were obtained before any study-specific screening or baseline period evaluations were performed. The anonymity of participating patients will be maintained to the extent required by applicable laws and in accordance with current HIPAA standards. This study was designed and monitored in accordance with Sponsor procedures, which complied with the ethical principles of Good Clinical Practice (GCP) as required by the major regulatory authorities, and in accordance with the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 33
Worldwide total number of subjects	33
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	33
Adolescents (12-17 years)	0
Adults (18-64 years)	0

From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 13 sites in the United States.

Pre-assignment

Screening details:

A total of 33 subjects were enrolled in the study treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Eteplirsen 30 mg/kg
------------------	---------------------

Arm description:

Subjects with Duchenne muscular dystrophy (DMD) amenable to exon 51 skipping received eteplirsen 30 milligram per kilogram (mg/kg) intravenous (IV) infusions, once weekly, for 96 weeks.

Arm type	Experimental
Investigational medicinal product name	Eteplirsen
Investigational medicinal product code	
Other name	EXONDYS 51™®
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received eteplirsen 30 mg/kg IV infusion once weekly.

Arm title	Control Group (Untreated) (Non-exon 51 Amenable Subjects)
------------------	---

Arm description:

Subjects with DMD not amenable to exon 51 skipping were observed for 96 weeks.

Arm type	No intervention
No investigational medicinal product assigned in this arm	

Number of subjects in period 1	Eteplirsen 30 mg/kg	Control Group (Untreated) (Non-exon 51 Amenable Subjects)
Started	26	7
Completed	25	3
Not completed	1	4
Consent withdrawn by subject	-	3
Subject was unable to complete due to schooling	-	1
Subject transitioned to commercial drug	1	-

End points

End points reporting groups

Reporting group title	Eteplirsen 30 mg/kg
Reporting group description: Subjects with Duchenne muscular dystrophy (DMD) amenable to exon 51 skipping received eteplirsen 30 milligram per kilogram (mg/kg) intravenous (IV) infusions, once weekly, for 96 weeks.	
Reporting group title	Control Group (Untreated) (Non-exon 51 Amenable Subjects)
Reporting group description: Subjects with DMD not amenable to exon 51 skipping were observed for 96 weeks.	

Primary: Number of Subjects with Treatment Emergent Adverse Events (TEAEs), Serious TEAEs and TEAEs Leading to Discontinuation

End point title	Number of Subjects with Treatment Emergent Adverse Events (TEAEs), Serious TEAEs and TEAEs Leading to Discontinuation ^[1]
-----------------	--

End point description:

AE was any untoward medical occurrence in a subject that did not necessarily have a causal relationship with the study drug. Serious adverse event (SAE) was an AE resulting in any of the following outcomes: death; Life-threatening event; Required or prolonged inpatient hospitalization; persistent or significant disability/incapacity; congenital anomaly. Treatment-emergent adverse events were events that developed or worsened during the on-treatment period (defined as time from first dose of study drug and up to 28 days after last dose of study drug [up to 100 weeks]) that were absent before treatment or that worsened relative to pre-treatment state. AEs included both serious and non-serious adverse events. Full set includes all subjects who are enrolled in the eteplirsen group and received at least 1 dose of eteplirsen as well as all subjects who were enrolled in the untreated group and had at least 1 assessment post-enrollment assessment.

End point type	Primary
----------------	---------

End point timeframe:

Baseline up to 100 weeks

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical testing was performed for the primary endpoint.

End point values	Eteplirsen 30 mg/kg	Control Group (Untreated) (Non-exon 51 Amenable Subjects)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	26	7		
Units: subjects				
Subjects with TEAEs	26	5		
Subjects with Serious TEAEs	4	0		
Subjects with TEAEs leading to discontinuation	0	0		

Statistical analyses

No statistical analyses for this end point

Primary: Number of Subjects With Potentially Clinically Significant Laboratory Abnormalities Reported as TEAEs

End point title	Number of Subjects With Potentially Clinically Significant Laboratory Abnormalities Reported as TEAEs ^[2]
-----------------	--

End point description:

Laboratory parameters included hematology, serum chemistry (SC), urinalysis and coagulation. Number of subjects with at least one potentially clinically significant abnormal findings were reported as TEAEs. The Investigator determined whether abnormal assessment results were clinically significant or not clinically significant. Clinical significance was defined as any variation in assessment results that had medical relevance resulting in an alteration in medical care. Full analysis set includes all subjects who are enrolled in the eteplirsen group and receive at least 1 dose of eteplirsen as well as all subjects who are enrolled in the untreated group who have at least 1 assessment post-enrollment assessment.

End point type	Primary

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical testing was performed for the primary endpoint.

End point values	Eteplirsen 30 mg/kg	Control Group (Untreated) (Non-exon 51 Amenable Subjects)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	26	7		
Units: Subjects				
Pyrexia	11	1		
Pulse pressure increased	1	0		
Tachycardia	1	0		

Statistical analyses

No statistical analyses for this end point

Primary: Number of Subjects With at Least One Abnormal Physical Examination Finding

End point title	Number of Subjects With at Least One Abnormal Physical Examination Finding ^[4]
-----------------	---

End point description:

Physical examinations, full and brief, were performed by the Investigator, a physician Sub-Investigator, or a Nurse Practitioner (if licensed in the state or province to perform physical examinations). Full physical examinations included examination of general appearance; head, ears, eyes, nose, and throat; heart; lungs; chest; abdomen; skin; lymph nodes; and musculoskeletal and neurological systems. Number of subjects with at least one abnormal physical examination finding was reported. Abnormality in physical examinations was based on Investigator's discretion. Full analysis set includes all subjects who are enrolled in the eteplirsen group and receive at least 1 dose of eteplirsen as well as all subjects who are enrolled in the untreated group who have at least 1 assessment post-enrollment assessment.

End point type	Primary
----------------	---------

End point timeframe:

Baseline up to 100 weeks

Notes:

[4] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical testing was performed for the primary endpoint.

Statistical analyses

No statistical analyses for this end point

Primary: Number of Subjects With Abnormalities in Electrocardiograms (ECGs) Reported as TEAEs

End point title	Number of Subjects With Abnormalities in Electrocardiograms (ECGs) Reported as TEAEs ^[5]
-----------------	---

End point description:

Twelve-lead ECGs and Holter ECGs were performed at a consistent time of day throughout the study. Electrocardiograms were performed only after the subject was in the supine position, resting, and quiet for a minimum of 15 minutes. The ECG was manually reviewed and interpreted by medically qualified personnel. Number of Subjects with at least one abnormalities in ECGs were reported as TEAEs. Full analysis set includes all subjects who are enrolled in the eteplirsén group and receive at least 1 dose of eteplirsén as well as all subjects who are enrolled in the untreated group who have at 1 assessment post-enrollment assessment.

End point type	Primary
----------------	---------

End point timeframe:

Baseline up to 96 weeks

Notes:

[5] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical testing was performed for the primary endpoint.

Secondary: Change From Baseline in Dystrophin Protein Levels Quantified by Western Blot at Week 48 and 96

End point title	Change From Baseline in Dystrophin Protein Levels Quantified by Western Blot at Week 48 and 96 ^[7]
-----------------	---

End point description:

Change from baseline in dystrophin protein levels (in muscle biopsy samples) were determined by Western blot at Week 48 and 96 was reported. For each time point, 2 blocks of tissues were analyzed by Western blot, each with 2 replicates of gels to determine the dystrophin level as compared to a healthy individual (Percent Normal). The block average value from 2 replicate gels was computed. The overall average was calculated as the mean of the block average values. The overall average values were used for all analyses. In case only 1 gel was available for a block, then that value was used as the block average value. Muscle Biopsy Set included all subjects who received at least 1 dose of eteplirsen and who had data from both baseline (pre-treatment) and Week 48 or 96 (on-treatment) muscle biopsy samples. Here, "number of subjects analysed" signifies number of subjects who were evaluable for this endpoint.

End point type	Secondary
End point timeframe:	
Baseline, Week 48 and 96	

Notes:

[7] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: Data for this endpoint was not planned to be collected and analysed for control group (untreated) (non-exon 51 amenable subjects).

End point values	Eteplirsen 30 mg/kg			
Subject group type	Reporting group			
Number of subjects analysed	25			
Units: Percent Normal Dystrophin Protein Level				
arithmetic mean (standard deviation)				
Change at Week 48 (n=14)	0.102 (± 0.0896)			
Change at Week 96 (n=11)	0.321 (± 0.4863)			

Statistical analyses

No statistical analyses for this end point

Secondary: Change From Baseline in Dystrophin Intensity Levels Determined by Immunohistochemistry (IHC) at Week 48 and 96

End point title	Change From Baseline in Dystrophin Intensity Levels Determined by Immunohistochemistry (IHC) at Week 48 and 96 ^[8]
-----------------	---

End point description:

Change from baseline in dystrophin intensity levels (in muscle biopsy samples) was determined by Immunohistochemistry at Week 48 and 96 was reported. Muscle Biopsy Set included all subjects who received at least 1 dose of eteplirsen and who had data from both baseline (pre-treatment) and Week 48 or 96 (on-treatment) muscle biopsy samples. Data for this outcome was not planned to be collected and analyzed for control group (untreated) (non-exon 51 amenable subjects). Here, "number of subjects analysed" signifies number of subjects who were evaluable for this endpoint.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Week 48 and 96

Notes:

[8] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Data for this endpoint was not planned to be collected and analysed for control group (untreated) (non-exon 51 amenable subjects).

End point values	Eteplirsen 30 mg/kg			
Subject group type	Reporting group			
Number of subjects analysed	25			
Units: Percent dystrophin positive fibers

Gastroenteritis viral			
subjects affected / exposed	2 / 26 (7.69%)	0 / 7 (0.00%)	
occurrences (all)	2	0	
Staphylococcal infection			
subjects affected / exposed	2 / 26 (7.69%)	0 / 7 (0.00%)	
occurrences (all)	2	0	
Impetigo			
subjects affected / exposed	0 / 26 (0.00%)	1 / 7 (14.29%)	
occurrences (all)	0	1	
Metabolism and nutrition disorders			
Decreased appetite			

subjects affected / exposed	2 / 26 (7.69%)	0 / 7 (0.00%)	
occurrences (all)	2	0	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 January 2015	Amendment 1: Added "eteplirsen-treated" to concepts and procedures relating to treated subjects versus untreated subjects; Created new schedule of events table for untreated subjects; Revised language for vital signs time points with regard to reducing the number of collections after 1 year of treatment if no infusion reaction occurred; also added language for the untreated group; Updated AE section to explain follow-up and resolution of AE; Revised overall number of subjects for trial selection.
08 June 2017	Amendment 2: Adjusted the order of endpoints and associated objectives due to recent guidance that dystrophin quantification by Western blot was preferred over assessments using immunohistochemistry; Updated the number of subjects to allow the untreated group to enroll less than 20 subjects; Added that subjects who discontinued eteplirsen dosing at Week 96 and transitioned to commercial drug did not need to complete the end-of-trial visit assessments; Clarified that the definition of analysis populations other than the safety population were provided in the Statistical Analysis Plan.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
