

Clinical trial results:

A Phase III, Randomised, Double-blind, Placebo-controlled, Multicentre Study of the Efficacy and Safety of Atezolizumab Plus Chemotherapy for Patients With Early Relapsing Recurrent (Inoperable Locally Advanced or Metastatic) Triple-negative Breast Cancer

Summary

EudraCT number	2016-005119-42
Trial protocol	HU GB ES FR FI PL PT IT
Global end of trial date	23 October 2024

Results information

Result version number	v1 (current)
This version publication date	31 October 2025
First version publication date	31 October 2025

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 October 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	23 October 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main purpose of this study is to evaluate the efficacy and safety of atezolizumab plus chemotherapy compared with placebo plus chemotherapy in participants with inoperable locally advanced or metastatic triple-negative breast cancer (TNBC).

Protection of trial subjects:

All study participants were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 January 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 2
Country: Number of subjects enrolled	Bosnia and Herzegovina: 4
Country: Number of subjects enrolled	Brazil: 36
Country: Number of subjects enrolled	Chile: 4
Country: Number of subjects enrolled	China: 70
Country: Number of subjects enrolled	Cuba: 3
Country: Number of subjects enrolled	Germany: 13
Country: Number of subjects enrolled	Spain: 43
Country: Number of subjects enrolled	Finland: 8
Country: Number of subjects enrolled	France: 57
Country: Number of subjects enrolled	United Kingdom: 34
Country: Number of subjects enrolled	Hungary: 9
Country: Number of subjects enrolled	Italy: 70
Country: Number of subjects enrolled	Kazakhstan: 7
Country: Number of subjects enrolled	Korea, Republic of: 54

Country: Number of subjects enrolled	Poland: 8

Country: Number of subjects enrolled	Portugal: 3
Country: Number of subjects enrolled	Russian Federation: 27
Country: Number of subjects enrolled	Singapore: 4
Country: Number of subjects enrolled	Serbia: 19
Country: Number of subjects enrolled	Türkiye: 55
Country: Number of subjects enrolled	United States: 9
Country: Number of subjects enrolled	South Africa: 8
Worldwide total number of subjects	595
EEA total number of subjects	211

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	535
From 65 to 84 years	60
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 595 participants with inoperable locally advanced or metastatic TNBC took part in the study at 126 investigative sites in 28 countries from 11 January 2018 to 23 October 2024.

Pre-assignment

Screening details:

Participants were randomized in a 1:1 ratio to receive atezolizumab with chemotherapy or placebo with chemotherapy.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo + Chemotherapy

Arm description:

Participants received atezolizumab matching placebo, by intravenous (IV) infusion on Day 1 of each cycle along with either gemcitabine, 1000 milligrams per square meter (mg/m^2), followed by carboplatin target under the curve (AUC) 2 milligrams per milliliter per minute ($\text{mg}/\text{ml}/\text{min}$), both administered by IV infusion on Days 1 and 8 of each cycle or capecitabine $1000 \text{ mg}/\text{m}^2$, twice daily (BID), orally on Days 1 to 14, followed by a 7-day rest period in each cycle (1 Cycle= 3 weeks). Treatment was continued until disease progression (PD), unacceptable toxicity, death or participant or investigator decision to discontinue treatment.

Arm type	Placebo
Investigational medicinal product name	Carboplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received carboplatin target AUC 2 $\text{mg}/\text{ml}/\text{min}$, administered by IV infusion on Days 1 and 8 of each cycle, followed by a 7-day rest period in each cycle (1 Cycle= 3 weeks).

Investigational medicinal product name	Capecitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received capecitabine $1000 \text{ mg}/\text{m}^2$, BID, orally on Days 1 to 14, followed by a 7-day rest period in each cycle (1 Cycle= 3 weeks).

Investigational medicinal product name	Gemcitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received gemcitabine, $1000 \text{ mg}/\text{m}^2$, administered by IV infusion on Days 1 and 8 of each cycle, followed by a 7-day rest period in each cycle (1 Cycle= 3 weeks).

Arm title	Atezolizumab + Chemotherapy
------------------	-----------------------------

Arm description:

Participants received atezolizumab, 1200 milligrams (mg), by IV infusion on Day 1 of each cycle along with either gemcitabine, 1000 mg/m², followed by carboplatin target AUC 2 mg/ml/min, both administered by IV infusion on Days 1 and 8 of each cycle or capecitabine, 1000 mg/m², BID, orally on Days 1 to 14, followed by a 7-day rest period in each cycle (1 Cycle = 3 weeks). Treatment was continued until PD, unacceptable toxicity, death or participant or investigator decision to discontinue treatment.

Arm type	Experimental
Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	RO5541267
Other name	MPDL3280A
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received atezolizumab 1200 mg, by IV infusion on Day 1 of each cycle (1 Cycle = 3 weeks)

Investigational medicinal product name	Gemcitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received gemcitabine, 1000 mg/m², administered by IV infusion on Days 1 and 8 of each cycle, followed by a 7-day rest period in each cycle (1 Cycle= 3 weeks).

Investigational medicinal product name	Capecitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received capecitabine 1000 mg/m², BID, orally on Days 1 to 14, followed by a 7-day rest period in each cycle (1 Cycle= 3 weeks).

Investigational medicinal product name	Carboplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received carboplatin target AUC 2 mg/ml/min, administered by IV infusion on Days 1 and 8 of each cycle, followed by a 7-day rest period in each cycle (1 Cycle= 3 weeks).

Primary: Overall Survival (OS) in Programmed Death Ligand 1 (PD-L1)-positive Population

End point title	Overall Survival (OS) in Programmed Death Ligand 1 (PD-L1)-positive Population
End point description: OS was defined as time from randomization to death from any cause. Participants without a reported death event at the time of the analysis were censored on the date they were last known to be alive. If no post-baseline data were available, OS was censored at the date of randomization +1 day. PD-L1 positive population included all participants randomized in the study whose PD-L1 status was tumor-infiltrating immune cells (IC) of 1% or greater (IC1/2/3) at the time of randomization, grouped according to their assigned treatment arm, whether or not the assigned study treatment was received.	
End point type	Primary

OR was defined as either a CR or PR, as determined by the investigator according to RECIST v1.1. CR was defined as the disappearance of all target lesions. Any pathological lymph nodes must have a reduction in short axis to <10 mm. PR was defined as at least a 30% decrease in the SOD of target lesions, taking as reference the baseline SOD, in the absence of CR. mITT population included all participants randomized under the protocol versions prior to version 4.0 (referred to as all-comers, i.e., PD-L1(SP142)-positive and PD-L1(SP142)-negative participants), grouped according to their assigned treatment arm, whether or not the assigned study treatment was received. Response-evaluable Population included participants randomized in the study with measurable disease at baseline. Percentages have been rounded off to nearest whole number.

Statistical analyses

No statistical analyses for this end point

Other pre-specified: ORR in China Population

End point title	ORR in China Population ^[7]
-----------------	--

End point description:

ORR= percentage of participants with measurable disease at baseline who achieved a documented unconfirmed OR. OR= either a CR or PR, as determined by the investigator according to RECIST v1.1. CR= disappearance of all target lesions. Any pathological lymph nodes must have a reduction in short axis to <10 mm. PR= at least a 30% decrease in the SOD of target lesions, taking as reference the baseline SOD, in the absence of CR. As pre-specified in the SAP, analysis for China population was to be conducted based on data maturity and estimated treatment effect from the global population. As the results for the global population did not meet pre-specified criteria, a separate analysis for China subpopulation was not conducted.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

Baseline up to end of study (Up to 68 months)

Notes:

[7] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: The endpoint is reporting data for China population only.

End point values	Placebo + Chemotherapy			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[8]			
Units: percentage of participants				
number (confidence interval 95%)	(to)			

Notes:

[8] - No separate analysis was performed for the China population.

No statistical analyses for this end point

Other pre-specified: DoR in China Population

End point title	DoR in China Population ^[13]
-----------------	---

End point description:

DoR=time from first occurrence of a documented unconfirmed OR (CR/PR) until date of PD per the investigator from tumor assessments using RECIST v1.1 or death from any cause, whichever occurs first. CR=disappearance of all target lesions. Any pathological lymph nodes must have a reduction in short axis to <10 mm. PR= $\geq 30\%$ decrease in the SOD of target lesions, taking as reference baseline SOD, in absence of CR. PD= $\geq 20\%$ increase in SOD of target lesions, taking as reference smallest sum on study, including baseline, in addition to relative increase of 20%, sum must also demonstrate an absolute increase of at least 5 mm. Appearance of one/more new lesions was also considered progression. As pre-specified in SAP, analysis for China population was to be conducted based on data maturity and estimated treatment effect from the global population. As the results for the global population did not meet pre-specified criteria, separate analysis for China subpopulation was not conducted.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

Time from the first occurrence of a documented OR until the date of PD/death (Up to 68 months)

Notes:

[13] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Other pre-specified: TTD in GHS/QoL According to EORTC QLQ-C30 in China Population

End point title	TTD in GHS/QoL According to EORTC QLQ-C30 in China Population ^[21]
-----------------	---

End point description:

TTD in GHS/QoL= minimally important decrease of ≥ 10 points at 2 consecutive assessment time-points on GHS/QoL scale (Items 29, 30) of EORTC QLQ-C30 consists of 30 questions that assess 5 aspects of participant functioning (physical, emotional, role, cognitive, & social), 3 symptom scales (fatigue, nausea & vomiting, & pain), GHS & QoL, & 6 single items (dyspnea, insomnia, appetite loss, constipation, diarrhea, & financial difficulties) with a recall period of the previous week. Participant responses to questions regarding GHS (Question 29: "How would you rate your overall health during the past week?") & QoL (Question 30: "How would you rate your overall quality of life during the past week?") were assessed & were scored on a 7-point scale (1=Very poor; 7=Excellent). Scores were transformed on scale of 0-100. High score= better QoL. As results for global population did not meet pre-specified criteria, separate analysis for China subpopulation was not conducted.

End point type	Other pre-specified
End point timeframe:	
Up to 68 months	

Notes:

[21] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint is reporting data for China population only.

Dictionary name	MedDRA
-----------------	--------

Dictionary version	27.1
--------------------	------

Reporting groups

Reporting group title	Atezolizumab + Chemotherapy
-----------------------	-----------------------------

Reporting group description:

Participants received atezolizumab 1200 mg, by IV infusion on Day 1 of each cycle along with either gemcitabine, 1000 mg/m², followed by carboplatin target AUC 2 mg/ml/min, both administered by IV infusion on Days 1 and 8 of each cycle or capecitabine, 1000 mg/m², BID, orally on Days 1 to 14, followed by a 7-day rest period in each cycle (1 Cycle = 3 weeks). Treatment was continued until PD, unacceptable toxicity, death or participant or investigator decision to discontinue treatment.

Reporting group title	Placebo + Chemotherapy
-----------------------	------------------------

Reporting group description:

Participants received atezolizumab matching placebo, by IV infusion on Day 1 of each cycle along with either gemcitabine, 1000 mg/m², followed by carboplatin target AUC 2 mg/ml/min, both administered by IV infusion on Days 1 and 8 of each cycle or capecitabine, 1000 mg/m², BID, orally on Days 1 to 14, followed by a 7-day rest period in each cycle (1 Cycle= 3 weeks). Treatment was continued until PD, unacceptable toxicity, death or participant or investigator decision to discontinue treatment.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 November 2017	<p>Protocol v2:</p> <ul style="list-style-type: none">• Two exclusion criteria were added-Symptomatic or rapid visceral progression-No prior treatment with an anthracycline and taxane• Updates were made to the list of events requiring permanent discontinuation of atezolizumab/placebo (addition of any recurrent Grade 2 or 3 hypophysitis or Grade 4 hypophysitis)• A new appendix was added to the protocol, detailing the risks associated with atezolizumab, and providing guidelines for the management of AEs associated with atezolizumab.
18 February 2019	<p>Protocol v3:</p> <ul style="list-style-type: none">• Inclusion criteria were updated• Safety updates were included based on the atezolizumab Investigator's Brochure (Version 14, dated October 2018)• Additional explanation was provided to clarify the conditions and process for unblinding in case of disease progression.• To correct a previous inconsistency within the protocol, references to measurements of capecitabine concentrations were removed.• Clarification was provided for cases where only one component of the study treatment (i.e., atezolizumab/placebo or chemotherapy) was discontinued permanently. In these cases, treatment with the other drugs may continue as long as the participants experienced clinical benefit.• Provisions had been included to allow the administration of carboplatin in exceptional cases of absolute neutrophil counts (ANC) being between >1500 and 1500 x 10⁶ /L and platelet count ≥100,000 x 10⁶ /L shows no evidence of fever or infection.• It was clarified that assessments on Day 8 of each cycle only applied to participants receiving carboplatin/gemcitabine, and that the coagulation panel tests on Day 1 of each cycle only applied to participants receiving capecitabine.

26 August 2019	<p>Protocol v4:</p> <ul style="list-style-type: none"> • Analysis of the primary endpoint was modified to occur hierarchically in the following fixed order: <ol style="list-style-type: none"> 1. OS in the PD-L1-positive population, 2. OS in the modified ITT population. • The primary analysis of OS to be completed when the required number of 247 mortality events have occurred in the PD-L1-positive subpopulation. • PFS and ORR were retained as secondary endpoints and were tested hierarchically after OS, in the PD-L1-positive population first, followed by the modified ITT population. • Two new secondary endpoints were added to the protocol: C-ORR and C-DoR. • To allow for the primary analysis of OS completed in the PD-L1-positive population, recruitment was to be extended as follows: after approximately 350 participants with inoperable recurrent TNBC had been randomised in the study, approximately 190 additional participants with PD-L1-positive tumour status were to be randomised. • The estimated total sample size was increased from 350 to 540 randomised participants. • The total study recruitment period was extended from 23 to 48 months. • It was anticipated that the final analysis of OS in the PD-L1-positive population would occur approximately 58 months (compared to the previously estimated 35 months in the modified ITT population) after FPI. • The analysis populations were updated as follows: <ul style="list-style-type: none"> -The PD-L1-positive subpopulation included all participants randomised in study whose tumour shows PD-L1 expression of $\geq 1\%$ at the time of randomisation. -The modified ITT population included all participants randomised in study before protocol version 4.0. -Sensitivity analyses of OS were to be completed on the FAS population, defined as all participants randomised in the study (before and after protocol amendment 4.0). -Supplemental analyses of OS were to be conducted to assess the consistency of treatment effect in the PD-L1-positive population randomised before and after protocol version 4.0.
26 February 2020	<p>Protocol v5:</p> <ul style="list-style-type: none"> • New section was added to evaluate whether the efficacy of atezolizumab plus chemotherapy compared with placebo plus chemotherapy as measured by OS and other efficacy endpoints in the China population was consistent with the efficacy observed in the Global population. • Recruitment of all-comers was closed after 382 all-comers were randomised in the Global study (compared to the planned approximately 350 participants); of these, 140 (36.6%) had PD-L1-positive tumour status (compared to the previously estimated 40%). To enable the primary analysis of OS in 330 PD-L1-positive participants, approximately 190 additional participants with PD-L1-positive tumour status were to be randomised, for a total of 572 randomised participants in the Global study (compared to the previously planned 540 participants). • Additional participants with PD-L1-positive tumour status were subsequently randomised in to 1:1 ratio in China only, for a total enrolment of approximately 70 participants with PD-L1-positive tumour status in mainland China, referred to as the China population. • For participants randomised in China, the clinical cut-off (CCO) date for the final OS analysis was when the target number of mortality events had occurred in the PD-L1-positive population. • Inclusion criterion #7 was updated to indicate that Chinese traditional medicines with an approved indication for cancer treatment were permitted as long as the last administration occurred at least 2 weeks prior to randomisation. • It was clarified that if additional enrolment in China was initiated, a separate analysis would be performed for the China population. • The final analysis of OS in the China population would be conducted when sufficient OS events had occurred. • The efficacy analyses would be unstratified for China Population instead of stratified.

21 December 2020	<p>Protocol v6:</p> <ul style="list-style-type: none"> The list of approved indications for atezolizumab was updated to include unresectable or metastatic hepatocellular carcinoma and BRAF V600 mutation-positive unresectable or metastatic melanoma. An updated summary of treatment-emergent (treatment-induced plus treatment-enhanced) anti-drug antibodies (ADAs) for Atezolizumab was included. The anticipated length of recruitment was revised from 48 to 53 months. The minimum survival follow-up has been updated from 10 to 5 months. The requirement for the Sponsor and its agents, the investigator and research staff to remain blinded to PD-L1 status is no longer applicable, has been deleted. It was clarified that completion of Patient-Reported Outcomes (PROs) after laboratory tests was permitted, provided there was no prior discussion of the participant's laboratory results or health record with clinic staff, and that the PROs were completed before drug administration. The description of the EORTC QLQ-C30 scales and scoring was updated for better clarity. General completion times were added for each PRO measure.
13 January 2021	<p>Protocol v7:</p> <ul style="list-style-type: none"> The list of approved indications for atezolizumab was updated to include unresectable or metastatic hepatocellular carcinoma and BRAF V600 mutation-positive unresectable or metastatic melanoma. Key updates include the insertion of the results for the: <ul style="list-style-type: none"> -Final overall survival (OS) analysis for Study WO29522 (IMpassion 130) -Primary analysis of progression-free survival (PFS) for Study MO39196 (IMpassion131)
12 November 2021	<p>Protocol v8:</p> <ul style="list-style-type: none"> The list of approved indications for atezolizumab was updated. The requirement for additional samples for ADA analyses from patients experiencing immune-mediated adverse events was removed Clarification was added to indicate that herbal therapies not intended for the treatment of cancer may be used during the study at the discretion of the investigator. Clarification was added that screening bone or PET scan must be performed to evaluate for bone metastases Language regarding PFS events in participants with missing data will be relocated to the SAP
25 January 2023	<p>Protocol v9:</p> <ul style="list-style-type: none"> Details on the timing of analysis of China population was provided to align with Statistical Analysis Plan (SAP) The indication-specific companion diagnostics approval status of the VENTANA PD-L1 (SP142) Assay for the assessment of the PD-L1 protein was updated Due to potentially still ongoing enrolment of participants in China at the time of primary endpoint analysis, clarification was added to indicate that treatment unblinding at the study level at the time of primary endpoint analysis only applied to randomized participants. Unblinding at the study level did not apply to participants who were not randomized at the time of primary endpoint analysis PRO evaluable population was removed, as PRO analysis was done using PD-L1 (SP142) positive population and the mITT population

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
