

Clinical trial results:

A Multi-centre, Double-blind, Randomised, Placebo-controlled, Parallel-arm Phase IIa Trial to Evaluate the Efficacy, Safety and Tolerability of 28-Day Oral Treatment with PXT002331 (Foliglurax) in Reducing Motor Complications of Levodopa Therapy in Subjects with Parkinson's Disease Experiencing End-of-dose Wearing Off and Levodopa-Induced Dyskinesia (AMBLED)

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 March 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 February 2020
Global end of trial reached?	Yes
Global end of trial date	02 March 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to assess the efficacy of 2 doses of foliglurax as an adjunct to levodopa in the reduction of OFF time in participants with Parkinson's Disease (PD).

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki (2013) and International Council for Harmonisation (ICH) Good Clinical Practice (1996).

Background therapy:

Participants continued to take their usual levodopa treatment, as well as permitted anti-Parkinsonian drugs (if any), from their own prescribed supply throughout the study. Participants were treated with a stable regimen of their levodopa-containing therapy and any permitted anti-Parkinsonian drugs during the study according to their usual regimen.

Evidence for comparator: -

Actual start date of recruitment	25 May 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 24
Country: Number of subjects enrolled	United Kingdom: 26
Country: Number of subjects enrolled	Austria: 3
Country: Number of subjects enrolled	France: 33
Country: Number of subjects enrolled	Germany: 32
Country: Number of subjects enrolled	Italy: 39
Worldwide total number of subjects	157
EEA total number of subjects	157

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	62
From 65 to 84 years	95
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants who met all the inclusion criteria and none of the exclusion criteria were enrolled.

Participants were randomised in 1:1:1 ratio to 3 treatment groups: Foliglurax 10 mg twice daily (BID), Foliglurax 30 mg BID, or Placebo BID.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Foliglurax 10 mg BID

Arm description:

Participants received 10 milligrams (mg) foliglurax capsules orally BID on Days 1 to 27, and a final single dose on the morning of Day 28.

Arm type	Experimental
Investigational medicinal product name	Foliglurax
Investigational medicinal product code	PXT002331
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Foliglurax was administered per dose and schedule specified in the arm description.

Arm title	Foliglurax 30 mg BID
------------------	----------------------

Arm description:

Participants received 30 mg foliglurax capsules orally BID on Days 1 to 27, and a final single dose on the morning of Day 28.

Arm type	Experimental
Investigational medicinal product name	Foliglurax
Investigational medicinal product code	PXT002331
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Foliglurax was administered per dose and schedule specified in the arm description.

Arm title	Placebo BID
------------------	-------------

Arm description:

Participants received placebo matched to foliglurax capsules orally BID on Days 1 to 27, and a final single dose on the morning of Day 28.

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	PXT002331
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to foliglurax was administered per schedule specified in the arm description.

Primary: Change From Baseline in the Daily Awake OFF Time Based on Participant Hauser Diary Entries at the End of Treatment Period (Day 28)

End point title	Change From Baseline in the Daily Awake OFF Time Based on Participant Hauser Diary Entries at the End of Treatment Period (Day 28)
End point description: Participants completed a 3-day Hauser diary with waking status (time OFF) every 30 minutes while awake before the Baseline and Day 28 Visits. The Hauser diary was completed by the participant during 3 consecutive days immediately preceding each scheduled site visit. An "OFF state" was defined as the time when medication was not providing benefit with respect to mobility, slowness and stiffness. OFF episodes might be heralded by nonmotor symptoms (for example, pain, anxiety) prior to the appearance of motor symptoms. Efficacy Full Analysis Set (FAS) included all participants who received at least 1 dose of foliglurax or placebo and had a valid baseline assessment and at least 1 valid postbaseline assessment (either at Day 14 or 28) of the primary efficacy variable (that is, Hauser daily awake OFF time). Here, 'n' signifies participants analysed for this endpoint at specified timepoints.

Secondary: Change From Baseline in the Total Objective Score (Parts 3 and 4) for Dyskinesia Impairment and Disability Assessed by Unified Dyskinesia Rating Scale (UDysRS) at the End of Treatment Period (Day 28)

End point title	Change From Baseline in the Total Objective Score (Parts 3 and
-----------------	--

End point description:

UDysRS Part 3 contains 7 questions about objective evaluation of dyskinesia impairment (dyskinesia severity, anatomic distribution, and type); and Part 4 contains 4 questions regarding dyskinesia disability based on Part 3 activities. Each question was scored with respect to severity, which was rated on a scale where 0 = normal, 1 = slight, 2 = mild, 3 = moderate and 4 = severe. The scores for the 2 Parts combined ranged from 0-44; with a higher score representing more severe dyskinesia. Efficacy FAS included all participants who received at least 1 dose of foliglurax or placebo and had a valid baseline assessment and at least 1 valid postbaseline assessment (either at Day 14 or 28) of the primary efficacy variable (that is, Hauser daily awake OFF time). Here, 'n' signifies participants analysed for this endpoint at specified timepoints.

End point title	Change From Baseline in UDysRS Score at the End of Treatment Period (Day 28)
-----------------	--

End point description:

UDysRS is a tool used to assess dyskinesia in PD. Part 1 contains 11 questions about ON time dyskinesia and the impact of ON-dyskinesia on experiences of daily living. Part 2 contains 4 questions about OFF-dystonia rating. Part 3 contains 7 questions about objective evaluation of dyskinesia impairment and Part 4 contains 4 questions regarding dyskinesia disability. Each question was scored with respect to severity, which was rated on a scale where 0 = normal, 1 = slight, 2 = mild, 3 = moderate and 4 = severe. UDysRS total score was obtained by summing the item scores, ranging from 0 to 104 with higher scores indicating more disability. Efficacy FAS included all participants who received at least 1 dose of foliglurax or placebo and had a valid baseline assessment and at least 1 valid postbaseline assessment (either at Day 14 or 28) of primary efficacy variable (that is, Hauser daily awake OFF time). Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 October 2018	<p>This amendment included the following changes:</p> <ul style="list-style-type: none">• Change in contract research organisation (CRO) medical monitor;• Clarified secondary efficacy outcome endpoints;• Clarified that there were multiple scores in the Hospital Anxiety and Depression Scale (HADS);• Moved Columbia-Suicide Severity Rating Scale (C-SSRS) and Scale for Assessment of Positive Symptoms for Parkinson's Disease Psychosis (SAPS-PD) to Safety and Tolerability Assessments;• Corrected the baseline QTcF as the average from the Screening Visit 1 and clarified that the time window for UDysRS assessments was defined during the Screening Visit 2;• Corrected exclusion criterion to include human immunodeficiency virus (HIV)-1 or -2 antibodies instead of both HIV-1 and -2 antibodies;• Added flexibility to exclusion criterion to clarify that participant rescreening was permitted, as this criterion was not intended to apply to screen failures;• Clarified that electrocardiograms (ECGs) should be performed before vital signs measurements and switched assessment text accordingly;• Clarified that follicle-stimulating hormone (FSH) testing was only to be performed at screening;• Corrected clinical laboratory units as per the central laboratory;• Updated the blood volume for foliglurax pharmacokinetic (PK) as a smaller volume could be used;• Revised the efficacy FAS and efficacy per protocol set (PPS) to better meet regulatory expectations and changed populations to sets;• Revised the primary efficacy analysis model to better meet regulatory expectations and modified the primary efficacy analyses so it was based on the efficacy FAS but was also to be repeated on the efficacy PPS;• Added a blinded interim PK analysis to support formulation development;• Clarified that serious adverse events (SAEs) were reported via electronic case report form (eCRF) and paper SAE report;• Clarified multiple items in the schedule of activities.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
