Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 March 2010
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 March 2010
Global end of trial reached?	Yes
Global end of trial date	26 March 2010
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This study assessed the safety and tolerability of RotaTeq™ (V260) in the healthy Chinese populations.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research. The following additional measure defined for this individual study was in place for the protection of trial participants: the primary investigator and the Ethics Review Committee reviewed blinded safety data and decided to move forward to the next cohort (Cohort I, then II, then III) based on their best clinical judgment.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 September 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	China: 144
Worldwide total number of subjects	144
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	48
Children (2-11 years)	48
Adolescents (12-17 years)	0
Adults (18-64 years)	48
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled into 3 cohorts. Randomization ratio was 1:1 (RotaTeq™ (V260):placebo) in each cohort. The study was conducted sequentially: Cohort I followed by Cohort II followed by Cohort III, with the primary investigator and Ethics Review Committee reviewing blinded safety data before the next cohort.

Pre-assignment

Screening details:

Healthy Chinese participants were enrolled in the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Carer, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1 Rotateq™

Arm description:

Adults ages 19 - 47 years randomized to receive a single dose of RotaTeq™

Arm type	Experimental
Investigational medicinal product name	Rotateq™
Investigational medicinal product code	
Other name	V260, Rotavirus vaccine, live, oral, pentavalent. The 2-mL vaccine consists of an oral solution of 5 live human-bovine reassortant rotaviruses.
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Single 2.0 mL dose of V260 (RotaTeq™) administered orally at enrollment

Arm title	Cohort I Placebo
------------------	------------------

Arm description:

Adults ages 19 - 47 years randomized to receive a single dose of placebo

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Single 2.0 mL dose of matching placebo to Rotateq™ administered orally at enrollment

Arm title	Cohort II RotaTeq™
------------------	--------------------

Arm description:

Children ages 2 - 6 years randomized to receive a single dose of RotaTeq™

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Rotateq™
Investigational medicinal product code	
Other name	V260, Rotavirus vaccine, live, oral, pentavalent. The 2-mL vaccine consists of an oral solution of 5 live human-bovine reassortant rotaviruses.
Pharmaceutical forms	Oral solution
Routes of administration	Oral use
Dosage and administration details:	
Single 2.0 mL dose of V260 (RotaTeq™) administered orally at enrollment	
Arm title	Cohort II Placebo
Arm description:	
Children ages 2 - 6 years randomized to receive a single dose of placebo	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use
Dosage and administration details:	
Single 2.0 mL dose of matching placebo to Rotateq™ administered orally at enrollment	
Arm title	Cohort III RotaTeq™
Arm description:	
Infants ages 6 - 12 weeks randomized to receive RotaTeq™ vaccination administered at 3 separate visits scheduled 28 to 70 days apart. The third dose was administered by 32 weeks of age.	
Arm type	Experimental
Investigational medicinal product name	Rotateq™
Investigational medicinal product code	
Other name	V260, Rotavirus vaccine, live, oral, pentavalent. The 2-mL vaccine consists of an oral solution of 5 live human-bovine reassortant rotaviruses.
Pharmaceutical forms	Oral solution
Routes of administration	Oral use
Dosage and administration details:	
2.0 mL doses of V260 (RotaTeq™) administered orally at 3 separate visits scheduled 28 to 70 days apart. The third dose was administered by 32 weeks of age.	
Arm title	Cohort III Placebo
Arm description:	
Infants ages 6 - 12 weeks randomized to receive placebo vaccination administered at 3 separate visits scheduled 28 to 70 days apart. The third dose was administered by 32 weeks of age.	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use
Dosage and administration details:	
2.0 mL doses of matching placebo to Rotateq™ administered orally at 3 separate visits scheduled 28 to 70 days apart. The third dose was administered by 32 weeks of age.

Primary: Number of Participants with a Serious Adverse Event

End point title	Number of Participants with a Serious Adverse Event ^[1]
End point description: An adverse event (AE) is defined as any unfavorable and unintended change in the structure, function, or chemistry of the body temporally associated with the use of the sponsor's product, whether or not considered related to the use of the product. Any worsening of a preexisting condition which is temporally associated with the use of the sponsor's product, is also an AE. A serious AE is an AE that results in death, is life threatening, results in or prolongs a hospitalization, is a congenital anomaly or birth defect, is a cancer, is an overdose, or may jeopardize the participant and require medical or surgical intervention. The population analyzed included all participants who received at least one dose of study drug and had safety follow-up.	
End point type	Primary
End point timeframe: Up to 14 days post vaccination	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: No statistical analysis was planned or conducted for this endpoint

Secondary: Number of Infants with Fecal Vaccine Virus Shedding

End point title	Number of Infants with Fecal Vaccine Virus Shedding ^[3]
-----------------	--

End point description:

Fecal shedding of vaccine rotavirus in Cohort III (infants) was evaluated by determining the number of participants whose stool was positive by both (1) the Enzyme-linked Immunosorbent Assay (EIA) to detect the rotavirus antigen, and (2) PCR VP6 Genotyping (a polymerase chain reaction assay specific for rotavirus genome 6, coding for the VP6 protein of the vaccine virus). For analysis, two stool samples were collected per participant on separate days between Day 3 and Day 7 following each vaccination dose. The population analyzed included participants in Cohort III who received the scheduled dose of vaccination and for whom the stool samples were available for testing. This endpoint applied to Cohort III only.

End point type	Secondary
----------------	-----------

End point timeframe:

Between Day 3 and Day 7 following each of 3 doses

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint applied to Cohort III only
