Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 July 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 December 2020
Global end of trial reached?	Yes
Global end of trial date	24 December 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the effect of treatment with FTD/TPI on HRQoL as measured by EORTC QLQ-C30 (global health status/quality of life scale)

Protection of trial subjects:

The clinical study was conducted in accordance with the ethical principles that have their origins in the Declaration of Helsinki and in accordance with the International Council on Harmonisation (ICH) guideline for good clinical practice (GCP).

The investigator obtained written informed consent of a patient prior to any study-related procedures including the documentation of results of clinical routine procedures for study purposes as set forth in the ICH-GCP guidelines and the respective European Union's and national legislation. Subjects had the right to withdraw consent at any time and without giving any reasons without prejudice to his or her future medical care by the investigator or other medical health care personnel at the institution. The investigator discussed with the subject the most appropriate way to withdraw to ensure the subject's health.

Background therapy:

Not applicable.

Evidence for comparator:

Not applicable. To evaluate the effect of treatment with trifluridine/tipiracil on quality of life, a controlled study with best supportive care (BSC) was chosen and considered appropriate comparative treatment according to the advice from the German Federal Joint Committee (G-BA) on 29 September 2016.

Actual start date of recruitment	22 September 2017
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 195
Worldwide total number of subjects	195
EEA total number of subjects	195

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	76
From 65 to 84 years	116
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

The recruitment period of this clinical study lasted from 22 September 2017 (first patient registered) to 08 January 2019 (last patient registered). 202 patients were recruited to 44 study centres in Germany, 7 of which did not enter the treatment / close observation phase (2 deaths, 3 patient`s wish, 1 AE, 1 violation of selection criteria).

Pre-assignment

Screening details:

Adult patients with histologically or cytologically confirmed UICC stage IV carcinoma of the colon or rectum with metastatic colorectal cancer, at least one measurable or non-measurable lesion as defined by RECIST version 1.1, any ECOG performance status, previously treated with or not considered candidates for available therapies.

Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not applicable.

Arms

Are arms mutually exclusive?	Yes
Arm title	FTD/TPI (trifluridine/tipiracil)

Arm description:

FTD/TPI (starting dose 35 mg/m² BSA/dose) was taken orally twice daily (BID) on Days 1 to 5 and Days 8 to 12 of each 28-day cycle as long as a benefit was observed or until unacceptable toxicity occurred.

Arm type	Experimental
Investigational medicinal product name	Trifluridine/tipiracil
Investigational medicinal product code	
Other name	Lonsurf (R)
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

The daily FTD/TPI dosage was calculated according to the body surface area (BSA). FTD/TPI (starting dose 35 mg/m² BSA/dose) was taken orally twice daily (BID) on Days 1 to 5 and Days 8 to 12 of each 28-day cycle as long as a benefit was observed or until unacceptable toxicity occurred. The dosage was not allowed to exceed 80 mg per dose. In case of haematological or non-haematological toxicities, criteria for dose interruption and dose modification applied. A maximum of 3 dose reduction levels (30 mg/m² BSA BID, 25 mg/m² BSA BID, and 20 mg/m² BSA BID) was permitted to a minimum dose of 20 mg/m² BID.

Arm title	BSC (Best Supportive Care)
------------------	----------------------------

Arm description:

Best supportive care, tailored to the patient`s individual needs.

Arm type	No intervention
No investigational medicinal product assigned in this arm	

Number of subjects in period 1	FTD/TPI (trifluridine/tipiracil)	BSC (Best Supportive Care)
Started	186	9
Completed	0	0
Not completed	186	9

Primary: Rate of responders with unchanged or improved HRQoL

End point title	Rate of responders with unchanged or improved HRQoL
End point description: Response was calculated as the mean of the score of the EORTC QLQ C30 global health status/quality of life scale (QL2) at all scheduled time points of HR-QoL analysis in the time interval from two days before start of Cycle 2 until the end of treatment/end of close observation compared to the baseline score of the global health status/quality of life (QL2) scale. The rate of responders was defined as the proportion of patients with response, i.e. improvement (≥ 10 scores) or stabilization (> -10 and < 10 scores) of the EORTC QLQ C30 global health status/ quality of life (QL2) score compared to the baseline score. CAVE: Only the analyses in FAS-C30 (pe) are the primary endpoint of the study.	
End point type	Primary
End point timeframe: From two days before start of Cycle 2 until the end of treatment/end of close observation.

Statistical analyses

Statistical analysis title	Primary endpoint analysis
Statistical analysis description:	
Calculation of the 2-sided 95% confidence interval for the response rate separately for both groups.	
Comparison groups	FTD/TPI (trifluridine/tipiracil) v BSC (Best Supportive Care)

Number of subjects included in analysis	112
Analysis specification	Pre-specified
Analysis type	equivalence ^[3]
Parameter estimate	Confidence interval
Point estimate	58.5
Confidence interval	
level	95 %
sides	2-sided
lower limit	48.5
upper limit	68

Notes:

[3] - A response rate of 45% ± 10% was assessed as appropriate in Group A (patients with ≥ 2 cycles FTD/TPI).

A response rate of 45% ± 20% was assessed as appropriate in Group B (patients with ≥ 2 cycles BSC).

Note: Number of patients needed was not achieved in Group B. Parameter estimate presented is estimate for Group A.

Secondary: Progression-free survival (PFS)

End point title	Progression-free survival (PFS)
End point description:	
PFS (based on RECIST version 1.1) was defined as the duration from the first administration of FTD/TPI (Group A) or Day 1 of observation Cycle 1 (Group B) to the day of radiological or clinical tumour progression or death of any cause, whichever came first.	
Patients who were not known to have had a radiological or clinical progression were censored for PFS analysis at the last date they were known not to have experienced progression.	
End point type	Secondary

End point timeframe:

Patients were followed until the end of study, at least one year after start of FTD/TPI / close observation.

End point values	FTD/TPI (trifluridine/tipiracil)	BSC (Best Supportive Care)	Full Analysis Set (FAS)	Per protocol

median (confidence interval 95%)	2.5 (2.1 to 2.9)	3.7 (2.2 to 4.7)	2.5 (2.2 to 3.1)	2.5 (2.1 to 3.2)

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival (OS)

End point title	Overall Survival (OS)
End point description:	
Duration from first administration of FTD/TPI (Group A) or Day 1 of observation Cycle 1 (Group B) to the day of death from any cause.	
Patients who were not known to have died were censored for OS analysis on the last day they were known to have been alive.	

End point type	Secondary
End point timeframe:	
Patients were followed until the end of study, at least one year after start of FTD/TPI / close observation.	

End point values	FTD/TPI (trifluridine/tipi racil)	BSC (Best Supportive Care)	Full Analysis Set (FAS)	Per protocol
Subject group type	Reporting group	Reporting group	Subject analysis set	Subject analysis set
Number of subjects analysed	186	9	195	171
Units: months				
median (confidence interval 95%)	6.9 (6.1 to 8.3)	4.7 (3.6 to 11.6)	6.8 (6.0 to 8.2)	6.8 (5.9 to 8.6)

Statistical analyses

No statistical analyses for this end point

Secondary: Average EORTC QLQ-C30 scores

End point title	Average EORTC QLQ-C30 scores
-----------------	------------------------------

End point description:

EORTC QLQ-C30 consists of the global health status (QL2) scale, the functional scales physical functioning (PF2), role functioning (RF2), emotional functioning (EF), cognitive functioning (CF), and social functioning (SF), and the symptom scales / items fatigue (FA), nausea and vomiting (NV), pain (PA), dyspnoea (DY), insomnia (SL), appetite loss (AP), constipation (CO), diarrhoea (DI), and financial difficulties (FI). For the global health status and functional scales higher scores (on a scale of 0 - 100) represent a higher QoL / higher/healthier level of functioning. For a symptom scale/item, higher scores represent a higher level of symptomatology/problems.

End point type	Secondary
End point timeframe:	
At baseline, during and after treatment/close observation. After treatment includes all questionnaires completed at the end of treatment visit and during follow-up. Only questionnaires completed within prespecified time windows were considered.

End point description:

EQ-5D-5L consists of the EQ-5D descriptive system comprising 5 dimensions mobility, self-care, usual activities, pain/discomfort, and anxiety/depression, and the EQ 20 cm vertical visual analogue scale (VAS). EQ-5D-5L results are represented by an index value between 0 and 1 computed by the Crosswalk Index Value Calculator, where a higher value represents a higher level of problems; EQ VAS scores are presented as continuous parameter (0-100) where a high value represents a high health profile.

End point type	Secondary
----------------	-----------

End point timeframe:

At baseline, during and after treatment/close observation. After treatment includes all questionnaires completed at the end of treatment visit and during follow-up. Only questionnaires completed within prespecified time windows were considered.

End point values	FTD/TPI (trifluridine/tipi racil)	BSC (Best Supportive Care)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	122 ^[6]	6 ^[7]		
Units: score points				
arithmetic mean (standard deviation)				
EQ-5D-5L index at baseline	0.8 (± 0.2)	0.7 (± 0.4)		
EQ-5D-5L index during treatment	0.7 (± 0.2)	0.6 (± 0.4)		
EQ-5D-5L index after treatment	0.6 (± 0.3)	0.5 (± 0.5)		
EQ VAS at baseline	62.7 (± 20.0)	65.0 (± 15.8)		
EQ VAS during treatment	58.1 (± 23.1)	68.5 (± 26.1)		
EQ VAS after treatment	49.5 (± 27.1)	61.9 (± 18.9)		

Notes:

[6] - 122 in FAS-EQ; EQ-5D-5L index n=120 at BL, 86 during, 57 after treatment; VAS n=120, 90, and 57.

[7] - 6 in FAS-EQ; EQ-5D-5L index n=5 and VAS n=6 at BL; both n=4 during and n=3 after treatment.

Reporting groups

Reporting group title	A: FTD/TPI (trifluridine/tipiracil) (SAF)
-----------------------	---

Reporting group description:

FTD/TPI (starting dose 35 mg/m² BSA/dose) was taken orally twice daily (BID) on Days 1 to 5 and Days 8 to 12 of each 28-day cycle as long as a benefit was observed or until unacceptable toxicity occurred.

Reporting group title	B: BSC (Best Supportive Care) (SAF)
-----------------------	-------------------------------------

Reporting group description:

Best supportive care, tailored to the patient`s individual needs.

Serious adverse events	A: FTD/TPI (trifluridine/tipiracil) (SAF)	B: BSC (Best Supportive Care) (SAF)	
Total subjects affected by serious adverse events			
subjects affected / exposed	83 / 186 (44.62%)	5 / 9 (55.56%)

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	A: FTD/TPI (trifluridine/tipiracil) (SAF)	B: BSC (Best Supportive Care) (SAF)	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	170 / 186 (91.40%)	6 / 9 (66.67%)	
Nervous system disorders			
Polyneuropathy	Additional description: Includes PTs polyneuropathy (n=8, FTD/TPI), neuropathy peripheral (n=1, FTD/TPI) and peripheral motor neuropathy (n=1, FTD/TPI).		
subjects affected / exposed	10 / 186 (5.38%)	0 / 9 (0.00%)	
occurrences (all)	10	0	
Blood and lymphatic system disorders			
Anaemia	Additional description: Includes PTs anaemia (n=39, FTD/TPI; n=1, BSC) and haemoglobin decreased (n=4, FTD/TPI).		
subjects affected / exposed	43 / 186 (23.12%)	1 / 9 (11.11%)	
occurrences (all)	56	1	
Leukopenia	Additional description: Includes PTs leukopenia (n=29, FTD/TPI) and white blood cell count decreased (n=8, FTD/TPI).		
subjects affected / exposed	37 / 186 (19.89%)	0 / 9 (0.00%)	
occurrences (all)	79	0	
Neutropenia	Additional description: Includes PTs neutropenia (n=48, FTD/TPI) and neutrophil count decreased (n=8, FTD/TPI).		
subjects affected / exposed	55 / 186 (29.57%)	0 / 9 (0.00%)	
occurrences (all)	117	0	
General disorders and administration site conditions			
Fatigue			
subjects affected / exposed	42 / 186 (22.58%)	2 / 9 (22.22%)	
occurrences (all)	53	3	
Oedema	Additional description: Includes PTs oedema (n=3, FTD/TPI) and oedema peripheral (n=17, FTD/TPI).		

subjects affected / exposed	19 / 186 (10.22%)	0 / 9 (0.00%)	
occurrences (all)	22	0	
Pain			
subjects affected / exposed	8 / 186 (4.30%)	2 / 9 (22.22%)	
occurrences (all)	9	2	
Pyrexia			
subjects affected / exposed	16 / 186 (8.60%)	0 / 9 (0.00%)	
occurrences (all)	24	0	
Gastrointestinal disorders			
Abdominal pain			
subjects affected / exposed	13 / 186 (6.99%)	1 / 9 (11.11%)	
occurrences (all)	14	1	
Ascites			
subjects affected / exposed	9 / 186 (4.84%)	1 / 9 (11.11%)	
occurrences (all)	13	1	
Constipation			
subjects affected / exposed	22 / 186 (11.83%)	0 / 9 (0.00%)	
occurrences (all)	25	0	
Diarrhoea			
subjects affected / exposed	38 / 186 (20.43%)	0 / 9 (0.00%)	
occurrences (all)	45	0	
Nausea			
subjects affected / exposed	42 / 186 (22.58%)	1 / 9 (11.11%)	
occurrences (all)	49	1	
Vomiting			
subjects affected / exposed	24 / 186 (12.90%)	1 / 9 (11.11%)	
occurrences (all)	32	1	
Respiratory, thoracic and mediastinal disorders			
Dyspnoea	Additional description: Includes PTs dyspnoea (n=16, FTD/TPI) and dyspnoea exertional (n=2, FTD/TPI).		
subjects affected / exposed	18 / 186 (9.68%)	0 / 9 (0.00%)	
occurrences (all)	21	0	
Skin and subcutaneous tissue disorders			
Alopecia			
subjects affected / exposed	13 / 186 (6.99%)	0 / 9 (0.00%)	
occurrences (all)	13	0	
Infections and infestations			

Infection subjects affected / exposed occurrences (all)	7 / 186 (3.76%) 8	0 / 9 (0.00%) 0	
Metabolism and nutrition disorders Decreased appetite subjects affected / exposed occurrences (all)	28 / 186 (15.05%) 31	0 / 9 (0.00%) 0	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 March 2018	<p>Amendment 1, Protocol version 3.0:</p> <p>Change of allowed periods and time points for study procedures during treatment phase: Study procedures on 'Day 1 of each treatment cycle before administration of FTD/TPI in the respective cycle/start of the observation cycle or within previous 3 days (maximum 72 hours) unless otherwise indicated below' (previously 2 days).</p> <p>Addition of a note: In case of any delay of the treatment start in the following treatment cycle, restaging has to be performed after 8 weeks or within previous 7 days (equivalent to duration of two treatment cycles with FTD/TPI without any treatment delay).</p> <p>Adjustment of text according to schedule of assessments (Section 2): Questionnaires EORTC-QLQ C30 and EQ-5D-5L including EQ VAS as paper version on Day 1 of the respective cycle or within previous 2 days.</p> <p>Update of information according to new SmPC for Lonsurf®: Update of one sentence on hepatic impairment: FTD/TPI is not recommended for use in patients with baseline moderate or severe hepatic impairment (National Cancer Institute [NCI] Criteria Group C and D defined by total bilirubin > 1.5 x ULN), as a higher incidence of Grade 3 or 4 hyperbilirubinaemia is observed in patients with baseline moderate hepatic impairment, although this is based on very limited data.</p> <p>Update of information on interactions: Deletion of one sentence: Inductive effect of tipiracil on human CYP isoforms cannot be excluded.</p>
30 July 2018	<p>Amendment 2, Protocol version 4.0:</p> <p>Updated information: Extension of the limitation of the early benefit assessment for Lonsurf® to 1 April 2020 (previously two years from 02 Feb 2017).</p> <p>The 1st of October 2018 as an optional data extract date for interim analysis – depending on whether this date or the time point of 50 evaluable patients permanently termination study treatment is earlier – was deleted.</p> <p>The following sentence was deleted: An interim report in the format of an integrated clinical study report will be prepared within three months after data extract date of the interim statistical analysis.</p>
07 December 2018	<p>Amendment 3, Protocol version 5.0:</p> <p>Change of study duration: Extension of the estimated accrual period from 1 year to 15 months. Extension of estimated study duration from 24 to 27 months. Change of Planned end of study from QII 2019 to QIV 2019.</p> <p>Change of sample size calculation: Addition of a table for sample sizes for alternative values of type I error if recruitment of 24 patients in Group B could not be achieved.</p>
29 April 2019	<p>Amendment 4, Protocol version 6.0:</p> <p>Change of duration of questioning quality of life: Extension of the time period for questioning of quality of life for patients treated with FTD/TPI for more than one year: questioning for the duration of treatment, at the end-of-treatment visit and at Month 1 of follow up.</p>

31 January 2020	Amendment 5, Protocol version 7.0: Extension of the study duration until the end of 2020. Additional analysis, study report and annual safety report (required because of extension of study duration).
