

Clinical trial results:

An Open-Label, Randomized, Phase 3 Clinical Trial of REGN2810 Versus Investigator's Choice of Chemotherapy in Recurrent or Metastatic Cervical Carcinoma

Summary

EudraCT number	2017-000350-19
Trial protocol	ES PL GB BE GR IT
Global end of trial date	20 April 2023

Results information

Result version number	v1 (current)
This version publication date	05 May 2024
First version publication date	05 May 2024

Trial information

Trial identification

Sponsor protocol code	R2810-ONC-1676

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 April 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	20 April 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare overall survival (OS) for participants with recurrent or metastatic cervical cancer who have histology of squamous cell carcinoma (SCC) and who had any eligible histology, treated with either cemiplimab or investigator's choice (IC) chemotherapy.

Protection of trial subjects:

It is the responsibility of both the sponsor and the investigator(s) to ensure that this clinical study will be conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki, and that are consistent with the ICH guidelines for GCP and applicable regulatory requirements

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 September 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 30
Country: Number of subjects enrolled	Belgium: 15
Country: Number of subjects enrolled	Brazil: 89
Country: Number of subjects enrolled	Canada: 42
Country: Number of subjects enrolled	Greece: 9
Country: Number of subjects enrolled	Italy: 35
Country: Number of subjects enrolled	Japan: 56
Country: Number of subjects enrolled	Korea, Republic of: 76
Country: Number of subjects enrolled	Poland: 45
Country: Number of subjects enrolled	Russian Federation: 85
Country: Number of subjects enrolled	Spain: 66
Country: Number of subjects enrolled	Taiwan: 34
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	United States: 24
Worldwide total number of subjects	608
EEA total number of subjects	170

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	533
From 65 to 84 years	73
85 years and over	2

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

752 participants were screened, 144 participants failed screening, 608 randomized to receive cemiplimab or investigator choice of chemotherapy (control treatment determined before randomization by investigator from options per protocol). Randomization was stratified

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cemiplimab

Arm description:

Participants received a fixed dose of 350 milligrams (mg) of cemiplimab intravenous (IV) infusion on Day 1 of every 3 weeks (Q3W) for up to 96 weeks (up to 16 cycles of 6 weeks each) or until progression of disease or unacceptable toxicity, voluntary withdrawal from the study.

Arm type	Experimental
Investigational medicinal product name	LIBTAYO
Investigational medicinal product code	REGN2810
Other name	cemiplimab
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Fixed Dose of 350 mg at a frequency of Day 1, every three weeks

Arm title	Investigator Choice (IC) Chemotherapy
------------------	---------------------------------------

Arm description:

Participants received IC of chemotherapy (options listed by class): (1) Antifolate: pemetrexed 500 mg per meter square (mg/m²) on Day 1; (2) Topoisomerase 1 inhibitor: topotecan 1 mg/m² daily for 5 days, starting on Day 1 or irinotecan 100 mg/m² weekly (Days 1, 8, 15 and 22), followed by 10 to 14 days rest, for a 42-day (6-week) cycle; (3) Nucleoside analogue: gemcitabine 1000 mg/m² on Days 1 and 8; (4) Vinca alkaloid: vinorelbine 30 mg/m² IV infusion based on body surface area for Q3W up to 96 weeks (up to 16 cycles of 6 weeks each) or until progression of disease or unacceptable toxicity, voluntary withdrawal from the study.

Arm type	Active comparator
Investigational medicinal product name	Antifolate: Pemetrexed
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

500 mg/m², , body surface area Day 1 every 3 weeks for up to 96 weeks

Investigational medicinal product name	Topoisomerase 1 inhibitor: topotecan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion, Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:	
1 mg/m ² body surface area daily for 5 days, starting on Day 1 for three weeks (up to 96 weeks)	
Investigational medicinal product name	Vinca alkaloid: Vinorelbine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
30 mg/m ² for a frequency of Days 1 and 8 for every three weeks, for up to 96 weeks	
Investigational medicinal product name	Nucleoside analogue: gemcitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Dose: 1000 mg/m ² body surface area at a frequency of Days 1 and 8 every 3 weeks for up to 96 weeks	
Investigational medicinal product name	Topoisomerase 1 inhibitor: irinotecan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
100 mg/m ² weekly (Days 1, 8, 15, and 22) followed by 10 to 14 days rest, for a 42-day (6-week) cycle for up to 96 weeks

Analysis specification	Pre-specified
Analysis type	
Method	Stratified Cochran-Mantel-Haenszel test
Parameter estimate	Odds ratio (OR)
Point estimate	3.136
Confidence interval	
level	95 %
sides	2-sided
lower limit	1.798
upper limit	5.468

Secondary: Duration of response (DOR) Assessed per RECIST 1.1

End point title	Duration of response (DOR) Assessed per RECIST 1.1
-----------------	--

End point description:

DOR was defined as the time from the date of first response (CR or PR) to the date of the first documented progressive disease (per RECIST 1.1) or death due to any cause. CR: Disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm (<1 cm). PR: At least a 30% decrease in the sum of the diameters of target lesions, taking as reference the baseline sum diameters. Participants who never progressed while being followed was censored at the last valid tumor measurement. DOR was determined by Kaplan-Meier estimate. Here 'n' = the number of evaluable subjects at the specific point in time. Here 'n' = the number of evaluable participants

End point type	Secondary
----------------	-----------

End point timeframe:

Time from the date of first response to the date of the first documented progressive disease or death due to any cause (up to 40 months)

End point values	Cemiplimab	Investigator Choice (IC) Chemotherapy

Number of subjects analysed	52	19		
Units: Months				
median (confidence interval 95%)	18.7 (16.4 to 99999)	7.2 (5.1 to 9.9)		

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants With Treatment Emergent Adverse Events (TEAEs), Serious TEAEs, and TEAEs Leading to Death

End point title	Number of Participants With Treatment Emergent Adverse Events (TEAEs), Serious TEAEs, and TEAEs Leading to Death
-----------------	--

End point description:

An adverse event (AE) was defined as any untoward medical occurrence in a participant or clinical investigation participant administered a pharmaceutical product and which does not necessarily have to have a causal relationship with this treatment. A TEAE was defined as those that are not present at baseline or represent the exacerbation of a pre-existing condition during the on-treatment period. A serious adverse event (SAE) was defined as any untoward medical occurrence that resulted in any of the following outcomes: death, life-threatening, required initial or prolonged in-patient hospitalization, persistent or significant disability/incapacity, congenital anomaly/birth defect, or considered as medically important event. Any TEAE included participants with both serious and non-serious TEAEs. Number of participants with TEAEs, serious TEAEs, and TEAEs leading to death were reported. Here 'n' = the number of evaluable participants

End point type	Secondary
----------------	-----------

End point timeframe:

From date of randomization up to 40 months

End point values	Cemiplimab	Investigator Choice (IC) Chemotherapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	300	290		
Units: Participants				
Participants with any TEAE	269	266		
Participants with any Serious TEAE	96	78		
Participants with any TEAE leading to Death	5	2

Secondary: Quality of Life (QoL): Change From Baseline in European Organization for the Research and Treatment of Cancer Quality of Life Questionnaire Core 30

(EORTC QLQ-C30) of Global Health Status /Quality of Life (GHS/QoL) and Physical Functioning Scales

End point title	Quality of Life (QoL): Change From Baseline in European Organization for the Research and Treatment of Cancer Quality of Life Questionnaire Core 30 (EORTC QLQ-C30) of Global Health Status /Quality of Life (GHS/QoL) and Physical Functioning Scales
-----------------	--

End point description:

EORTC QLQ-C30 is a 30-question tool used to assess the overall QoL in cancer participants. It consisted of 15 domains: 1 GHS/QoL scale, 5 functional scales (Physical, role, cognitive, emotional, social), and 9 symptom scales/items (Fatigue, nausea and vomiting, pain, dyspnea, sleep disturbance, appetite loss, constipation, diarrhea, financial impact). Most items are scored 1 ("not at all") to 4 ("very much") except for the items contributing to the GHS/QoL, which are scored 1 ("very poor") to 7 ("excellent"). A linear transformation was applied to the raw scores so that all transformed scores lie between 0 to 100. For the GHS/QoL and 5 functional scales a high score indicates better global health status/functioning and a negative change from baseline indicated less improvement. For the symptom scales, a high score indicates a higher level of symptoms, and a negative change from baseline indicated an improvement in symptoms.

End point type	Secondary
----------------	-----------

End point timeframe:

From Cycle 1 Day 1 up to 40 months (Each cycle = 42 days)

End point values	Cemiplimab	Investigator Choice (IC) Chemotherapy
