

## Clinical trial results:

### A Non-controlled, Open-Label, Multicenter, Study of Efficacy of rFVIII Fc for Immune Tolerance Induction (ITI) in Severe Hemophilia A Subjects With Inhibitors Undergoing the First ITI Treatment

#### Summary

EudraCT number	2017-000373-36
Trial protocol	ES DE BE GB FR BG IT Outside EU/EEA
Global end of trial date	16 February 2021

#### Results information

Result version number	v1 (current)
This version publication date	28 August 2021
First version publication date	28 August 2021

#### Trial information

##### Trial identification

Sponsor protocol code	LPS16473
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03093480
WHO universal trial number (UTN)	-
Other trial identifiers	Bioverativ Therapeutics Inc.: 997HA402

Notes:

#### Sponsors

Sponsor organisation name	Bioverativ, a Sanofi company
Sponsor organisation address	225 Second Avenue, Waltham, Massachusetts (MA), United States, 02451
Public contact	Trial Transparency Team, Bioverativ, a Sanofi company, Contact-US@sanofi.com
Scientific contact	Trial Transparency Team, Bioverativ, a Sanofi company, Contact-US@sanofi.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001114-PIP01-10
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 April 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	16 February 2021
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study was to describe the time to tolerisation (i.e., immune tolerance induction [ITI] success) with Recombinant Coagulation Factor VIII Fc (rFVIII Fc) in subjects within a maximum of 48 weeks (12 months) of ITI treatment.

Protection of trial subjects:

The study was conducted by investigators experienced in the treatment of paediatric subjects. The parent(s) or guardian(s) as well as the subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time. In addition to the consent form for the parent(s)/guardian(s), an assent form in age-appropriate language was provided and explained to the subject. Repeated invasive procedures were minimised. The number of blood samples as well as the amount of blood drawn were adjusted according to age and weight. All subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in accordance with the trial subjects' written informed consent and applicable personal data protection laws.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 December 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	United States: 5
Country: Number of subjects enrolled	Spain: 1
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Bulgaria: 3
Country: Number of subjects enrolled	Italy: 1
Worldwide total number of subjects	16
EEA total number of subjects	7

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	7
Children (2-11 years)	8
Adolescents (12-17 years)	1
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 14 active centres in 7 countries between 08-Dec-2017 to 16-Feb-2021.

### Pre-assignment

Screening details:

Total 16 paediatric subjects were screened, enrolled and received drug.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

<b>Arm title</b>	Recombinant Coagulation Factor VIII Fc (rFVIIIFc)
------------------	---

Arm description:

Subjects were to receive rFVIIIFc at a dose of 200 international units (IU)/kilogram (kg) as once daily injections or divided on several injections per day at the discretion of the investigator, starting at baseline visit up to maximum of 48 Weeks in ITI Period. Subjects who met the criteria for ITI success entered the tapering period and received rFVIIIFc at a dose adjusted according to investigator judgment based on the FVIII activity levels and with the aim of tapering the rFVIIIFc dose to reach a prophylactic dosing regimen within 16 weeks (4 months). Follow-Up was for 32 weeks under an adjusted prophylactic regimen according to investigator judgment.

Arm type	Experimental
Investigational medicinal product name	rFVIIIFc
Investigational medicinal product code	
Other name	ELOCTATE/ELOCTA; BIIB031; efmoctocog alfa; antihemophilic factor [recombinant]; Fc fusion protein
Pharmaceutical forms	Powder for injection
Routes of administration	Intravenous use

Dosage and administration details:

rFVIIIFc 200 IU/kg/day in ITI Period, 50 or 100 IU/kg (adjusted according to investigator judgement) in tapering period and prophylactic regimen in follow-up period intravenously.

Number of subjects in period 1	Recombinant Coagulation Factor VIII Fc (rFVIIIFc)
Started	16
Tapering Period	10 <sup>[1]</sup>
Follow-up Period	10 <sup>[2]</sup>
Completed	16

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Tapering Period Full Analysis Set: includes subjects entering the tapering phase of the

study.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Follow-Up Period Full Analysis Set: includes all subjects entering the follow-up phase in the study.

## Baseline characteristics

### Reporting groups

Reporting group title	Recombinant Coagulation Factor VIII Fc (rFVIIIFc)
-----------------------	---

Reporting group description:

Subjects were to receive rFVIIIFc at a dose of 200 international units (IU)/kilogram (kg) as once daily injections or divided on several injections per day at the discretion of the investigator, starting at baseline visit up to maximum of 48 Weeks in ITI Period. Subjects who met the criteria for ITI success entered the tapering period and received rFVIIIFc at a dose adjusted according to investigator judgment based on the FVIII activity levels and with the aim of tapering the rFVIIIFc dose to reach a prophylactic dosing regimen within 16 weeks (4 months). Follow-Up was for 32 weeks under an adjusted prophylactic regimen according to investigator judgment.

Reporting group values	Recombinant Coagulation Factor VIII Fc (rFVIIIFc)	Total	
Number of subjects	16	16	
Age categorical Units: Subjects			

Age continuous Units: years arithmetic mean standard deviation	3.8 ± 4.06	-	
Gender categorical			
Based on inclusion criteria, only male subjects were included.			
Units: Subjects			
Female	0	0	
Male	16	16	
Race (NIH/OMB) Units: Subjects			
American Indian or Alaska Native	0	0	
Asian	0	0	
Native Hawaiian or Other Pacific Islander	0	0

White	12	12	
More than one race	0	0	
Unknown or Not Reported	2	2	

## End points

### End points reporting groups

Reporting group title	Recombinant Coagulation Factor VIII Fc (rFVIIIIFc)
-----------------------	--

Reporting group description:

Subjects were to receive rFVIIIIFc at a dose of 200 international units (IU)/kilogram (kg) as once daily injections or divided on several injections per day at the discretion of the investigator, starting at baseline visit up to maximum of 48 Weeks in ITI Period. Subjects who met the criteria for ITI success entered the tapering period and received rFVIIIIFc at a dose adjusted according to investigator judgment based on the FVIII activity levels and with the aim of tapering the rFVIIIIFc dose to reach a prophylactic dosing regimen within 16 weeks (4 months). Follow-Up was for 32 weeks under an adjusted prophylactic regimen according to investigator judgment.

### Primary: Time to Tolerisation With rFVIIIIFc

End point title	Time to Tolerisation With rFVIIIIFc <sup>[1]</sup>
-----------------	--

End point description:

Time required for subjects to achieve ITI success, where ITI success was defined as achieving all 3 of the following criteria: confirmed negative titers consisting of 2 consecutive negative inhibitor assessments within 2 weeks (less than [ $<$ ] 0.6 Bethesda units/millilitre [mL] by the Nijmegen-modified Bethesda assay); incremental recovery (IR) greater than or equal to ( $\geq$ ) 66 percent (%) of the expected IR in 2 consecutive assessments; half-life ( $t_{1/2}$ )  $\geq$  7 hours. Subjects who were in ITI full analysis set (includes all subjects receiving at least 1 infusion of rFVIIIIFc) and achieved ITI success.

End point type	Primary
----------------	---------

End point timeframe:

Up to 48 Weeks

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint was descriptive in nature, no statistical analysis was provided.

### Secondary: Annualised Bleeding Rates During Immune Tolerance Induction Period

End point title	Annualised Bleeding Rates During Immune Tolerance Induction Period
-----------------	--

**End point description:**

A bleeding episode started from the first sign of a bleed and ended no more than 72 hours after the last treatment for the bleed, within which any symptoms of bleeding at the same location or injections less than or equal to 72 hours apart were considered the same bleeding episode. Annualised bleeding rate for a subject during the ITI period was defined as the number of bleeding episodes divided by the length of the ITI period in days\* 365.25. ITI full analysis set which excludes subjects who were observed for less than 90 days during the period.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to 48 weeks

End point values	Recombinant Coagulation Factor VIII Fc (rFVIIIIFc)			
Subject group type	Reporting group			
Number of subjects analysed	13			
Units: episodes per subject per year				
arithmetic mean (standard deviation)	6.6 (± 9.50)			

**Statistical analyses**

No statistical analyses for this end point

**Secondary: Annualised Bleeding Rates After Immune Tolerance Induction Period**

End point title	Annualised Bleeding Rates After Immune Tolerance Induction Period
-----------------	---

**End point description:**

A bleeding episode started from the first sign of a bleed and ended no more than 72 hours after the last treatment for the bleed, within which any symptoms of bleeding at the same location or injections less than or equal to 72 hours apart were considered the same bleeding episode. Annualised bleeding rate for a subject after the ITT period (for tapering and follow-up period) was defined as the number of bleeding episodes divided by the length of the period after the ITI period in days\* 365.25. Tapering period full analysis set excluding subjects who were observed for less than 90 days in the period.

End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All AEs were collected from signature of the informed consent form up to end of the study (up to 2 years) regardless of seriousness or relationship to investigational product.

Adverse event reporting additional description:

Reported AEs were TEAEs i.e. defined as AEs that developed, worsened, or became serious on or after the first administration of rFVIIIIFc. Analysis performed on ITI full analysis set.

Assessment type	Systematic

Vitamin d deficiency			
subjects affected / exposed	1 / 16 (6.25%)		
occurrences (all)	1		

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 February 2018	Following changes were made: Primary reason for this amendment was to provide clarifications, consistency, and a few corrections.
11 July 2019	Following changes were made: Text was added as appropriate: "this study would enroll up to 17 subjects", Or "approximately, 17 subjects would be treated." Specific changes for Canada from Protocol 1.1 and 2.1 were added - the primary reason for this amendment was to reduce the number of subjects to be enrolled. Given the rarity of the disease and coupled with a low enrollment rate, a decision was made by the Sponsor to end enrollment at a total of 16 subjects in all countries, effective 12 Dec 2019. No safety concerns contributed to this decision. Clarified the timing for subjects moving from interim ITI visits to ITI outcome assessment visits, and clarified sample collection schedules for anti-drug antibodies.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
