Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	31 August 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 July 2018
Global end of trial reached?	Yes
Global end of trial date	18 July 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary efficacy objective of this trial is to demonstrate that bexagliflozin is non-inferior to sitagliptin by evaluating the treatment effect on HbA1c reduction at week 24 in subjects with inadequately controlled T2DM on metformin.

Protection of trial subjects:

General safety assessments included treatment emergent AE (TEAE), 12-lead electrocardiograms parameters, physical examinations, vital signs including orthostatic blood pressure, urinalysis, blood chemistry, hematology, estimated glomerular filtration rate (eGFR) and use of concomitant medications. During placebo run-in period, subjects were instructed to measure self-monitored blood glucose (SMBG) in fasted state. During the treatment period, study subjects were instructed to measure the fasting SMBG daily. Any approved medication for diabetes that was not contraindicated was permissible to be used as a rescue medication for hyperglycemia, if it continued after diet and exercise counseling. If hypoglycemia occurred in any subjects, either metformin or rescue medication was to be reduced. If recurrent symptomatic hypoglycemia continued, the study drug was to be discontinued and the subject to be withdrawn from the study.

Background therapy:

At the time of screening, all subjects were on metformin at a stable dose of ≥ 1500 mg per day for ≥ 8 weeks and have received diet and exercise counseling. Study subjects continued to receive open-labeled metformin during the entire study at a stable dose and frequency.

Evidence for comparator:

The comparator, sitagliptin, is a DPP-4 inhibitor, which prevents the degradation of incretin. Incretin increases insulin production and reduces hepatic glucose production, leading to better glucose metabolism. DPP-4 inhibitors are considered second-line therapy for T2DM in clinical practice and are often prescribed with metformin as a combination therapy for treating T2DM. DPP-4 inhibitors can reduce the risk of long-term microvascular complications via effective glycemic control and do not have weight gain or increased hypoglycemic risk compared with placebo.

Actual start date of recruitment	12 October 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 114
Country: Number of subjects enrolled	Spain: 75
Country: Number of subjects enrolled	Czech Republic: 41
Country: Number of subjects enrolled	Hungary: 56
Country: Number of subjects enrolled	United States: 36
Country: Number of subjects enrolled	Japan: 62

Worldwide total number of subjects	384
EEA total number of subjects	286

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	259
From 65 to 84 years	125
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 384 eligible subjects were enrolled in the study. Subjects were recruited from Czech Republic, Hungary, Poland, Spain, USA and Japan.

Pre-assignment

Screening details:

Subjects with inadequately controlled T2DM with HbA1c between 7.0% and 11%, while taking metformin at ≥ 1500 mg per day were enrolled. All eligible subjects had 1 week run-in period. A change in treatment for hypertension or dyslipidemia during the run-in period was considered as screen failure.

Pre-assignment period milestones

Number of subjects started	563 ^[1]
Intermediate milestone: Number of subjects	Entered Run-in: 395
Intermediate milestone: Number of subjects	Randomized: 386
Number of subjects completed	384

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Failure at screening: 168
Reason: Number of subjects	Failure during run-in: 9
Reason: Number of subjects	Excluded due to site closure for GCP violation: 2

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The number of subjects who started the pre-assignment period included those who signed the informed consent form. The worldwide number enrolled in the trial included all those who were successfully randomized, except for two subjects where the clinical sites were closed due to GCP violation.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Assessor

Blinding implementation details:

Bexagliflozin tablets, 20 mg, and placebo were blue caplet-shaped, film-coated tablets. Sitagliptin tablets, 100 mg, and placebo were beige, round, film-coated tablets with "277" on one side. The results of urinary glucose testing were not available to any study personnel or subjects.

Arms

Are arms mutually exclusive?	Yes
Arm title	Bexagliflozin

Arm description:

The subjects received Bexagliflozin tablets, 20 mg, once daily and Sitagliptin placebo tablets, once daily, for 24 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Bexagliflozin tablets, 20 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
The subjects received Bexagliflozin tablets, 20 mg, once daily orally.	
Investigational medicinal product name	Sitagliptin tablets, placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
The subjects received Sitagliptin tablets, placebo, once daily orally.	
Arm title	Sitagliptin
Arm description:	
The subjects received Sitagliptin tablets, 100 mg, once daily and Bexagliflozin placebo tablets, once daily, for 24 weeks.	
Arm type	Active comparator
Investigational medicinal product name	Sitagliptin tablets, 100 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Sitagliptin 100 mg, orally, once daily	
Investigational medicinal product name	Bexagliflozin tablets, placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
The subjects received Bexagliflozin tablets, placebo, once daily orally.	

Number of subjects in period 1	Bexagliflozin	Sitagliptin
Started	191	193
Completed	180	189
Not completed	11	4
Adverse event, serious fatal	1	-
Consent withdrawn by subject	4	2
Adverse event, non-fatal	5	1
Pregnancy	1	-
Lost to follow-up	-	1

Primary: Change in HbA1c from Baseline at Week 24

End point title	Change in HbA1c from Baseline at Week 24
End point description: The primary effectiveness objective was to demonstrate that bexagliflozin was non-inferior to sitagliptin by evaluating the treatment effect on HbA1c reduction at week 24 in subjects with T2DM inadequately controlled by metformin.	
End point type	Primary
End point timeframe: HbA1c was measured at weeks -3, 0, 6, 12, 18, 24 and 26 (Follow up).	

End point values	Bexagliflozin	Sitagliptin		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	180 ^[1]	190 ^[2]		
Units: Percentage				
least squares mean (confidence interval 95%)	-0.74 (-0.86 to -0.62)	-0.82 (-0.93 to -0.71)		

Notes:

[1] - 11 subjects in the bexagliflozin arm had missing values for the primary endpoint.

[2] - 3 subjects in the sitagliptin arm had missing values for the primary endpoint.

Statistical analyses

Statistical analysis title	Difference of LS Means from Sitagliptin 100 mg
Statistical analysis description: The statistical method to estimate the treatment effect was based on the ITT analysis set using all the observed data and a mixed model repeated measures (MMRM) approach. The full model is a mixed-effects repeated measures analysis that includes region, treatment, visit, treatment-by-visit interaction and the baseline HbA1c value as fixed effect covariates. As unstructured covariance matrix was assumed.	

Comparison groups	Bexagliflozin v Sitagliptin
Number of subjects included in analysis	370
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[3]
Parameter estimate	Difference of LS Means
Point estimate	0.08
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.07
upper limit	0.22

Notes:

[3] - If the 95% confidence interval was below the specified non-inferiority margin 0.35%, the results would have led to a conclusion of non-inferiority of bexagliflozin treatment compared to sitagliptin treatment. The non-inferiority margin of 0.35% was determined based on a reference clinical trial that demonstrated the effectiveness of sitagliptin, 100 mg, compared to placebo on HbA1c reduction in subjects with T2DM.

Secondary: Change in FPG from Baseline at Week 24

End point title	Change in FPG from Baseline at Week 24
End point description:	
To evaluate the treatment effect of bexagliflozin vs. sitagliptin on the change in FPG at week 24.	
End point type	Secondary
End point timeframe:	
Fasting plasma glucose (FPG) was measured at weeks -3, 0, 6, 12, 18, 24 and 26 (follow-up).	

End point values	Bexagliflozin	Sitagliptin		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	180 ^[4]	190 ^[5]		
Units: mmol/L				
least squares mean (confidence interval 95%)	-1.82 (-2.09 to -1.55)	-1.45 (-1.70 to -1.19)		

Notes:

[4] - 11 subjects in the bexagliflozin arm with missing values were excluded.

[5] - 3 subjects in the sitagliptin arm with missing values were excluded.

subjects affected / exposed	1 / 191 (0.52%)	0 / 193 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Gangrene			
subjects affected / exposed	1 / 191 (0.52%)	0 / 193 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	

Frequency threshold for reporting non-serious adverse events: 3 %

Non-serious adverse events	Bexagliflozin	Sitagliptin	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	28 / 191 (14.66%)	47 / 193 (24.35%)	
Infections and infestations			
Nasopharyngitis			
subjects affected / exposed	15 / 191 (7.85%)	25 / 193 (12.95%)	
occurrences (all)	15	29	
influenza			
subjects affected / exposed	3 / 191 (1.57%)	10 / 193 (5.18%)	
occurrences (all)	3	10	
Urinary tract infection			
subjects affected / exposed	7 / 191 (3.66%)	4 / 193 (2.07%)	
occurrences (all)	9	4	
Metabolism and nutrition disorders			
Hypoglycaemia			
subjects affected / exposed	6 / 191 (3.14%)	10 / 193 (5.18%)	
occurrences (all)	12	14	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 April 2017	Sponsor contact changed. Storage guideline for bexagliflozin and sitagliptin tablets was changed. Study procedure modified to include body weight measurement at every visit except Visit 2. Drug accountability added to ensure adequate adherence and record keeping. Study activities modified to include body weight measurement at every visit except Visit 2. Drug accountability check is added to V3, V4, V5, V6 and V7. The investigators and study administrative structure is amended to include guidelines which ensure all qualified persons involved with trial-related duties to have proof of qualification and proof of adequate training on the protocol and assigned tasks. Appendix 1 is amended to match the changes in study activities.
26 October 2017	The current sponsor study contact was updated. The current Theracos Medical Monitor was updated.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
