Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 August 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	05 June 2020
Global end of trial reached?	Yes
Global end of trial date	17 August 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objectives of this study will be to evaluate the efficacy of gefapixant in reducing cough frequency as measured over a 24-hour period at Week 12, and to evaluate the safety and tolerability of gefapixant. The primary hypothesis is that at least one gefapixant dose is superior to placebo in reducing coughs per hour (over 24 hours) at Week 12.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 March 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	3 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 49
Country: Number of subjects enrolled	Canada: 44
Country: Number of subjects enrolled	Czechia: 53

Country: Number of subjects enrolled	Poland: 53
Country: Number of subjects enrolled	Spain: 46
Country: Number of subjects enrolled	Taiwan: 15
Country: Number of subjects enrolled	Turkey: 22
Country: Number of subjects enrolled	Ukraine: 12
Country: Number of subjects enrolled	United Kingdom: 65
Country: Number of subjects enrolled	United States: 123

Worldwide total number of subjects	732
EEA total number of subjects	227

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	447
From 65 to 84 years	283
85 years and over	2

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Of 732 participants randomized to the 52-week treatment period, 730 participants received at least 1 dose of study intervention. After the main study, 41 participants continued in an optional Off-Treatment (Off-Tx) Durability observational study period (no treatment).

Period 1

Period 1 title	52-Week Treatment Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Assessor, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received dose-matched placebo tablets twice daily (BID) during the 12-week main study period and 40-week extension period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants receive dose-matched placebo tablets orally BID during the 12-week main study period and during the 40-week extension period.

Arm title	Gefapixant 15 mg BID
------------------	----------------------

Arm description:

Participants received a gefapixant 15 mg tablet and placebo tablet to match gefapixant 45 mg BID during the 12-week main study period and 40-week extension period.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants receive placebo to gefapixant 45 mg tablet orally BID during the 12-week main study period and during the 40-week extension period.

Investigational medicinal product name	Gefapixant
Investigational medicinal product code	
Other name	MK-7264
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Gefapixant 15 mg tablet administered orally BID during the 12-week main study period and during the 40-week extension period.

Arm title	Gefapixant 45 mg BID
------------------	----------------------

Arm description:

Participants received a gefapixant 45 mg tablet and placebo tablet to match gefapixant 15 mg BID during the 12-week main study period and 40-week extension period.

Arm type	Experimental
Investigational medicinal product name	Gefapixant
Investigational medicinal product code	
Other name	MK-7264
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Gefapixant 45 mg tablet administered orally BID during the 12-week main study period and during the 40-week extension period.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants receive placebo to gefapixant 15 mg tablet orally BID during the 12-week main study period and during the 40-week extension period.

Number of subjects in period 1	Placebo	Gefapixant 15 mg BID	Gefapixant 45 mg BID
Started	244	244	244
Treated	243	244	243
Completed	199	200	184
Not completed	45	44	60
Adverse event, serious fatal	2	1	-
Site Closure	1	-	-
Consent withdrawn by subject	37	39	55
Physician decision	2	3	3
Screen Failure	1	-	1
Lost to follow-up	2	1	1

Period 2

Period 2 title	12-Week Off-Treatment Durability Period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Assessor, Subject

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo: Off Tx
Arm description: Participants previously treated with dose-matched placebo BID for 52 weeks during the main study and extension study periods were observed for up to 3 months during an optional Off-Treatment Durability study period (participants received no treatment).	
Arm type	No intervention
No investigational medicinal product assigned in this arm	
Arm title	Gefapixant 15 mg BID: Off Tx
Arm description: Participants previously treated with gefapixant 15 mg BID for 52 weeks during the main study and extension study periods were observed for up to 3 months during an optional Off-Treatment Durability study period (participants received no treatment).	
Arm type	No intervention
No investigational medicinal product assigned in this arm	
Arm title	Gefapixant 45 mg BID: Off Tx
Arm description: Participants previously treated with gefapixant 45 mg BID for 52 weeks during the main study and extension study periods were observed for up to 3 months during an optional Off-Treatment Durability study period (participants received no treatment).	
Arm type	No intervention
No investigational medicinal product assigned in this arm	

Number of subjects in period 2^[1]	Placebo: Off Tx	Gefapixant 15 mg BID: Off Tx	Gefapixant 45 mg BID: Off Tx
Started	10	18	13
Completed	10	18	13

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Not all participants continued in the optional Off-Treatment Period.

Baseline 24-hour Coughs per Hour			
24-hour objective coughs per hour was defined as the total number of cough events during the monitoring period (24-hour interval) divided by 24 hours (denominator could be different if the recording period was actually <24 hours but ≥20 hours). Baseline assessment was based on 24-hour sound recordings using a digital recording device which recorded sounds from the lungs and trachea through a chest contact sensor, as well as ambient sounds through a lapel microphone. All participants with 24-hour Coughs per Hour data available at baseline were analyzed (n=232, 235, 237).

Primary: Model-Based Geometric Mean Ratio (GMR) of 24-hour Objective Coughs Per Hour (Week 12/Baseline)

End point title	Model-Based Geometric Mean Ratio (GMR) of 24-hour Objective Coughs Per Hour (Week 12/Baseline)
End point description: 24-hour objective coughs per hour was defined as the total number of cough events during the monitoring period (24-hour interval) divided by 24 hours. Assessment was based on 24-hour sound recordings using a digital recording device which recorded sounds from the lungs and trachea through a chest contact sensor, as well as ambient sounds through a lapel microphone. A longitudinal analysis of covariance (ANCOVA) model was applied to log-transformed cough counts to determine geometric mean (GM) 24-hour objective coughs per hour at baseline and Week 12 on the original scale. The GMR corresponding to the Week 12 GM 24-hour objective coughs per hour divided by the Baseline GM 24-hour objective coughs per hour was reported for all treatment study arms. All randomized participants in the analysis model who had taken at least 1 dose of study intervention and provided at least 1 baseline and at least 1 Week 12 24-hour cough observation during the treatment period were analyzed.

End point title	Percentage of Participants (Model-Based) With a \leq -30% Change from Baseline in 24-hour Objective Coughs Per Hour at Week 12
-----------------	--

End point description:

24-hour coughs/hour defined as the total number of cough events during the 24-hour monitoring period divided by 24 hours. Assessment based on 24-hour sound recordings using a digital recording device. Percent change in 24-hour coughs/hour = (change from baseline in 24-hour coughs per hour/baseline 24-hour coughs per hour) \times 100%. Negative values indicate a decrease in cough rate, while positive values indicate an increase in cough rate. A participant considered a responder if percent change from baseline in 24-hour coughs/hour was \leq -30% (or a \geq 30% reduction from baseline); and considered a non-responder otherwise. Percentage of participants (logistic regression model-based) with a \leq -30% change from baseline in 24-hour coughs/hour at Week 12 reported for all treatment study arms.

All randomized participants in the analysis model who had taken \geq 1 dose of study intervention and had available 24-hour cough data at baseline and \geq 1 available post-baseline measurement were analyzed.

Secondary: Percentage of Participants (Model-Based) With a ≤ -1.3 -point Change from Baseline in Mean Weekly Cough Severity Diary (CSD) Total Score at Week 12

End point title	Percentage of Participants (Model-Based) With a ≤ -1.3 -point Change from Baseline in Mean Weekly Cough Severity Diary (CSD) Total Score at Week 12
-----------------	--

End point description:

The CSD evaluates the frequency of cough, intensity of cough and disruption and has a total of 7 items, each with scores ranging from 0 (best) to 10 (worst). The total daily CSD score was the sum of these seven item scores (Min=0, Max=70). Mean weekly total score was defined as the average of mean total daily scores collected during the week prior to each visit. Baseline was defined as the average CSD scores collected during the week prior to Day 1 (Day -6 to Day 0). Participants were considered responders if the change from baseline in mean weekly CSD total score was ≤ -1.3 points (or a ≥ 1.3 point reduction from baseline); and considered non-responder otherwise. The percentage of participants with a ≤ -1.3 point change from baseline in CSD at Week 12 was reported for all treatment study arms.

All randomized participants who received ≥ 1 dose of study intervention, had available CSD data at baseline and ≥ 1 available post-baseline measurement were analyzed.

Secondary: Percentage of Participants (Model-Based) With a \leq -2.7-point Change from Baseline in Mean Weekly CSD Total Score at Week 12

End point title	Percentage of Participants (Model-Based) With a \leq -2.7-point Change from Baseline in Mean Weekly CSD Total Score at Week 12
-----------------	--

End point description:

The CSD evaluates frequency of cough, intensity of cough and disruption and has a total of 7 items, each with scores ranging from 0 (best) to 10 (worst). The total daily CSD score was the sum of these seven item scores (Min=0, Max=70). Mean weekly total score was defined as the average of the mean total daily scores collected during the week prior to each visit. Baseline was defined as the average CSD scores collected during the week prior to Day 1 (Day -6 to Day 0). Participants were considered responders if the change from baseline in mean weekly CSD total score was \leq -2.7 points (or a \geq 2.7 point reduction from baseline); and considered non-responder otherwise. The percentage of participants with a \leq -2.7 point change from baseline in CSD at Week 12 was reported for all treatment study arms.

All randomized participants who had taken \geq 1 dose of study intervention and had available CSD data at baseline and \geq 1 available post-baseline measurement were analyzed.

Secondary: Percentage of Participants (Model-Based) With a \leq -30 millimeter (mm) Change from Baseline in Cough Severity Visual Analog Scale (VAS) Score at Week 12

End point title	Percentage of Participants (Model-Based) With a \leq -30 millimeter (mm) Change from Baseline in Cough Severity Visual Analog Scale (VAS) Score at Week 12
-----------------	--

End point description:

Cough severity was scored using the Cough Severity VAS, a single-item question asking the participant to rate the severity of their cough "today" using a 100 mm VAS (100-point scale) ranging from 0 ("No Cough") to 100 ("Extremely Severe Cough"). Mean weekly VAS score was derived as the average of VAS scores collected during the week prior to each visit. Baseline was defined as the average VAS scores collected during the week prior to Day 1 (Day -6 to Day 0). A participant was considered a responder if the change from baseline in mean weekly Cough Severity VAS score was \leq -30 mm (or a \geq 30 mm reduction from baseline); and considered non-responder otherwise. The percentage of participants with \leq -30 mm change from baseline in Cough Severity VAS at Week 12 was reported for all treatment study arms.

All randomized participants who had taken \geq 1 dose of study intervention and had available Cough Severity VAS data at baseline and \geq 1 available post-baseline measurement were analyzed.

Secondary: Percentage of Participants (Model-Based) With a ≥ 1.3 -point Change from Baseline in Leicester Cough Questionnaire (LCQ) Total Score at Week 12

End point title	Percentage of Participants (Model-Based) With a ≥ 1.3 -point Change from Baseline in Leicester Cough Questionnaire (LCQ) Total Score at Week 12
-----------------	--

End point description:

The LCQ assesses the impact of chronic cough on health-related quality of life. It consists of 19 items which are divided over 3 domains: Physical, Psychological, and Social. A 7-point Likert scale is used to rate each item. For each domain, the domain score (range 1-7) is the sum of individual item score within the domain divided by the number of items in the domain. LCQ total score is the sum of the three domain scores and ranges from 3-21; with a higher score corresponding to a better health status. A participant was considered a responder if the change from baseline in LCQ total score was ≥ 1.3 -points (increase from baseline); and considered non-responder otherwise. The percentage of participants with a ≥ 1.3 -point change from baseline in LCQ total score at Week 12 was reported for all treatment study arms.

All randomized participants who had taken ≥ 1 dose of study intervention and had available LCQ data at baseline and ≥ 1 available post-baseline measurement were analyzed.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

On-Treatment Period (plus 2-week telephone follow-up): Up to Week 54; Off-Treatment (Off-Tx) Period: From Week 52 through Week 64 (approximately 12 weeks)

Adverse event reporting additional description:

All-Cause Mortality (ACM) reported for all randomized participants. Serious and Nonserious AEs reported for participants treated during 52-Week Treatment Period. AEs reported separately for treatment period and optional Off-Tx Period. Per protocol, only ACM, drug-related serious and nonserious AEs, and pregnancies monitored during Off-Tx Period.

Assessment type	Systematic
