Notes:

**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No	No

1901/2006 apply to this trial?
--------------------------------

Notes:

### Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 November 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 November 2018
Global end of trial reached?	Yes
Global end of trial date	30 November 2018
Was the trial ended prematurely?	Yes

Notes:

### General information about the trial

Main objective of the trial:

The primary objective of this study is to determine whether the combination of seribantumab + fulvestrant is more effective than placebo + fulvestrant based on investigator assessed Progression Free Survival (PFS) in HRG positive patients (defined as HRG ISH score of > or = to 1+)

Protection of trial subjects:

N/A

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 August 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

### Population of trial subjects

#### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 7
Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	United States: 11
Country: Number of subjects enrolled	Canada: 1
Worldwide total number of subjects	22
EEA total number of subjects	10

Notes:

#### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	15
From 65 to 84 years	7
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

At the time of the study termination by the prior Sponsor (Merrimack Pharmaceuticals), 62 sites participated in the study (27 in North America and 36 in Europe).

### Pre-assignment

Screening details:

Patients that have signed informed consent, identified as HRG positive based on centralized tissue analysis & have successfully completed study entry criteria (safety population-patients receiving at least one dose of study medication).

### Pre-assignment period milestones

Number of subjects started	22
Number of subjects completed	22

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Carer, Subject

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Arm A (Experimental): Seribantumab and Fulvestrant

Arm description:

Seribantumab (a human monoclonal antibody that targets ErbB3, a cell surface receptor that is activated by the ligand heregulin. Heregulin-driven ErbB3 signaling has been implicated as a mechanism of tumor growth and resistance to targeted, cytotoxic and anti-endocrine therapies. When used in the combination setting, seribantumab is designed to block ErbB3 signaling in order to enhance the anti-tumor effect of a combination therapy partner): fixed dose of 3000 mg intravenously (IV) on day 1 and 15 of each 28-day cycle

Fulvestrant (a drug treatment of hormone receptor-positive metastatic breast cancer in post-menopausal women with disease progression following anti-estrogen therapy. It is an estrogen receptor antagonist with no agonist effects, which works both by down-regulating and by degrading the estrogen receptor): 500 mg intramuscularly (IM) on Days 1 and 15 of Cycle 1, and then on Day 1 of each subsequent 28 day cycle

Arm type	Experimental
Investigational medicinal product name	Seribantumab
Investigational medicinal product code	
Other name	MM-121
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

Fixed dose of 3000 mg intravenously (IV) on day 1 and 15 of each 28-day cycle

Investigational medicinal product name	Fulvestrant
Investigational medicinal product code	
Other name	Faslodex
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

500 mg intramuscularly (IM) on Days 1 and 15 of Cycle 1, and then on Day 1 of each subsequent 28 day cycle

<b>Arm title</b>	Arm B (Control): Placebo and Fulvestrant
------------------	--

**Arm description:**

Placebo: intravenously (IV) on day 1 and 15 of each 28-day cycle

Fulvestrant: (a drug treatment of hormone receptor-positive metastatic breast cancer in post-menopausal women with disease progression following anti-estrogen therapy. It is an estrogen receptor antagonist with no agonist effects, which works both by down-regulating and by degrading the estrogen receptor): 500 mg intramuscularly (IM) on Days 1 and 15 of Cycle 1, and then on Day 1 of each subsequent 28 day cycle

Arm type	Placebo and Fulvestrant
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	Solution containing 20 mM histidine, 150 mM sodium chloride, at a pH of 6.5
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

**Dosage and administration details:**

Intravenously (IV) on day 1 and 15 of each 28-day cycle

Investigational medicinal product name	Fulvestrant
Investigational medicinal product code	
Other name	Faslodex
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

500 mg intramuscularly (IM) on Days 1 and 15 of Cycle 1, and then on Day 1 of each subsequent 28 day cycle

<b>Number of subjects in period 1</b>	Arm A (Experimental): Seribantumab and Fulvestrant	Arm B (Control): Placebo and Fulvestrant
Started	11	11
Completed	11	11

## Baseline characteristics

### Reporting groups

Reporting group title	Arm A (Experimental): Seribantumab and Fulvestrant
-----------------------	--

Reporting group description:

Seribantumab (a human monoclonal antibody that targets ErbB3, a cell surface receptor that is activated by the ligand heregulin. Heregulin-driven ErbB3 signaling has been implicated as a mechanism of tumor growth and resistance to targeted, cytotoxic and anti-endocrine therapies. When used in the combination setting, seribantumab is designed to block ErbB3 signaling in order to enhance the anti-tumor effect of a combination therapy partner): fixed dose of 3000 mg intravenously (IV) on day 1 and 15 of each 28-day cycle

Fulvestrant (a drug treatment of hormone receptor-positive metastatic breast cancer in post-menopausal women with disease progression following anti-estrogen therapy. It is an estrogen receptor antagonist with no agonist effects, which works both by down-regulating and by degrading the estrogen receptor): 500 mg intramuscularly (IM) on Days 1 and 15 of Cycle 1, and then on Day 1 of each subsequent 28 day cycle

Reporting group title	Arm B (Control): Placebo and Fulvestrant
-----------------------	--

Reporting group description:

Placebo: intravenously (IV) on day 1 and 15 of each 28-day cycle

Fulvestrant: (a drug treatment of hormone receptor-positive metastatic breast cancer in post-menopausal women with disease progression following anti-estrogen therapy. It is an estrogen receptor antagonist with no agonist effects, which works both by down-regulating and by degrading the estrogen receptor): 500 mg intramuscularly (IM) on Days 1 and 15 of Cycle 1, and then on Day 1 of each subsequent 28 day cycle

Reporting group values	Arm A (Experimental): Seribantumab and Fulvestrant	Arm B (Control): Placebo and Fulvestrant	Total
Number of subjects	11	11	22
Age categorical Units: Subjects			
<=18 years	0	0	0
Between 18 and 65 years	8	7	15
>=65 years	3	4	7
Gender categorical Units: Subjects			
Female	11	11	22
Male	0	0	0
Metastatic burden			
Based upon the population treated, the most important baseline measure was CT scans to determine metastatic burden, as the primary endpoint was investigator assessed PFS.			
TNM Staging (Tumor size):			
T1 (T1a,T1b & T1c): 2 cm (3/4 of an inch) or less across. T2: > 2 cm but not more than 5 cm (2 inches) across. T3: > 5 cm across. T4 (T4a,T4b,T4c,T4d): Tumor of any size growing into the chest wall or skin. As a rule, the lower the number, the less the cancer has spread. A higher number, such as stage IV, means cancer has spread more. And within a stage, an earlier letter means a lower stage.			
Units: Subjects			
TNM Stage I	0	1	1
TNM Stage II	0	2	2
TNM Stage IIa	4	0	4
TNM Stage IIb	1	0	1
TNM Stage III	0	2	2
TNM Stage IIIa	1	0	1

TNM Stage IIc	1	0	1
TNM Stage IV	4	6	10
Heregulin positive status and staining in archival tissue			
Measure Description: Women had to be $\geq$ HRG 1+ positive in their submitted tumor sample to qualify for the study			
Units: Subjects			
Heregulin positive status and staining in archival	11	11	22

### Subject analysis sets

Subject analysis set title	Intent to Treat
Subject analysis set type	Intention-to-treat
Subject analysis set description:	
Intent to treat (ITT) population treated up to 150 days	
Subject analysis set title	Safety analysis
Subject analysis set type	Safety analysis
Subject analysis set description:	
The safety population includes patients receiving at least one dose of study medication. All safety analyses were to be performed on this population.	

Reporting group values	Intent to Treat	Safety analysis

The safety population includes patients receiving at least one dose of study medication. All safety analyses were to be performed on this population.	

### Primary: Progression Free Survival

End point title	Progression Free Survival <sup>[1]</sup>
End point description:	
Progression Free Survival is defined as the time from randomization to the first documented radiographical progression of disease using RECIST v.1.1 of death from any cause, whichever comes first as assessed by the investigator. The tumor assessment (i.e., scan dates) was used for progression/censor date not the date corresponding to the determination of overall response. Progression-free survival time distribution and median survival for each treatment group were analysed using the Kaplan-Meier method.	
End point type	Primary
End point timeframe:	
Randomization until progression of disease or death due to any cause up to 13 months (the study terminated prematurely). The primary analysis was planned to be initiated when 58 PFS events have occurred	
Notes:	
[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.	
Justification: Because of the small sample size at the time of the premature study closure, only partial data are summarized in the final tables and listings, and a full clinical study report will not be written. There were no efficacy, pharmacokinetic, or biomarker data feasible for the analysis, and as such, no related analyses were performed.

No statistical analyses for this end point

## Secondary: Pharmacokinetic (PK) Profile of Seribantumab When Given in Combination With Fulvestrant and of Fulvestrant When Given in Combination With Seribantumab

End point title	Pharmacokinetic (PK) Profile of Seribantumab When Given in Combination With Fulvestrant and of Fulvestrant When Given in Combination With Seribantumab
-----------------	--

End point description:

Pharmacokinetic (PK) evaluation are performed on samples obtained pre-dose on day 1 and 15 of each 28-day cycle to assess pre-treatment trough concentration of MM-121. The maximum observed concentration (C<sub>max</sub>) is presented and calculated using Non compartmental analysis (NCA) . Serum levels of MM-121 are measured at a central lab using an enzyme-linked immunosorbent assay (ELISA).

End point type	Secondary
----------------	-----------

End point timeframe:

The study terminated prematurely after 13 months. Were to be analysed post-dose on Cycle 1, Week 1 & pre-dose for all subsequent seribantumab infusion until the completion of Cycle 2. Fulvestrant PK sample were to be collected prior to seribantumab dose.

End point values	Arm A (Experimental) : Seribantumab and Fulvestrant	Arm B (Control): Placebo and Fulvestrant	Intent to Treat

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From baseline through to premature study completion up to 13 months (30 Nov 2018).

Adverse event reporting additional description:

The safety population includes patients receiving at least one dose of study medication. All safety analyses were performed on this population. Safety analyses (AE and laboratory analyses) were performed using the safety population. AE were coded using the latest MedDRA dictionary 21.0. Severity of AE was grade according to the NCI CTCAE v.4.03.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 April 2017	Amendment 1.1: The rationale for making this change from a Phase 3 potential registration study to a Phase 2 proof of concept study, that it is not intended to support a marketing application, follows from a corporate project portfolio review at Merrimack.
28 April 2017	Amendment 1.2: Minor administrative changes.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Sponsor (Merrimack Pharmaceuticals, INC.) terminated the trial early due to business decision.

Notes:
